RE: **Soil Delineation Report and Remediation Workplan: Oilfield Water Logistics (OWL) Produced Water Pipeline Nearby Unit Letter M, N, C, D, Sections 9 and 4, T26S, R36E, Lea County, New Mexico – Case No. 1RP- 4860**

Dear Mr. Sanders:

KJ Environmental Mgt., Inc. (KJE) is pleased to submit this Soil Delineation Report and Remediation Workplan for the Produced Water Pipeline Release located near Jal in Lea County, New Mexico. This report discusses background information, assessment purpose and scope of work, execution of work, and documents the corresponding results.

We appreciate your selection of KJE for this project and look forward to assisting you further on other projects. If you have any questions, please do not hesitate to contact either of the undersigned at 940-387-0805. Thank you for the opportunity to provide professional environmental consulting services. It has been a pleasure working with you.

Best Regards,

Heather Leven
Environmental Project Manager

Dena M. Vandenberg, REM, LEEP AP
Director of Environmental Services

Table of Contents

1.0 Summary

KJ Environmental Mgt., Inc. (KJE), was retained by Oilfield Water Logistics (OWL) to complete certain delineation activities for a produced water pipeline release to vacant land situated approximately five miles southwest of Jal in Lea County, New Mexico. The results of the delineation activities are summarized as follows:

- On October 24, 2017, KJE was notified by Mr. Phillip Sanders, Safety Director with OWL, regarding a spill occurrence at the above referenced location. Following the New Mexico Oil Conservation Division (NMOCD), part of the New Mexico Energy, Minerals, and Natural Resources Department (EMNRD) notification and approval, the spill was assigned remediation case number 1RP-4860. Soil delineation activities included the advancement of 16 soil borings to depths ranging from zero to 22 feet below ground surface (bgs). Analytical soil data identified chloride at concentrations above the NMOCD approved criteria. Details regarding the spill delineation activities and remediation plan are further summarized herein.

2.0 Introduction

On October 24, 2017, KJE was provided notification by Mr. Phillip Sanders, Safety Director with OWL, regarding a spill occurrence over a relatively short time frame. KJE provided further notification to the New Mexico Oil Conservation Division (NMOCD), part of The New Mexico Energy, Minerals, and Natural Resources Department (EMNRD), of the spill at 10:05 a.m. on October 23, 2017. It was determined that 2,800 barrels of produced water was released during the spill event. KJE submitted Form C-141 Spill reports to OCD on November 1, 2017, for their review. A response received from the NMOCD, indicated that the incident was assigned remediation case number 1RP-4860. The general view of the spill is illustrated in Appendix A on Figure A1.

Subsequent to the NMOCD directive to complete division-approved corrective action, at the request of the NMOCD, KJE completed a delineation workplan detailing the collection of soil samples for analysis to delineate the vertical and horizontal extent of produced water impacted soil. This workplan was submitted by KJE and administratively approved by Ms. Olivia Yu on December 11, 2017. The NMOCD approved Work Plan for the Characterization of Impacts is located in Appendix G of this report.

As such, following approval of the characterization of impacts workplan, from January 10 through January 23, 2018, 16 soil borings were advanced within the spill area, one of which (soil boring BG) was advanced outside of the impacted soil area, in close proximity to the spill area, in an effort to confirm background soil constituents. Soil samples collected were transferred to an accredited laboratory and analyzed for benzene, toluene, ethylbenzene, and xylenes (BTEX), extended range total petroleum hydrocarbons (TPH), and/ or chloride. Implementation of the characterization of impacts workplan is further detailed below.

3.0 Environmental Assessment Activities

3.1 Delineation Activities

In accordance with the NMOCD Approved Work Plan for the Characterization of Impacts, KJE personnel observed the drilling subcontractor advance 16 soil borings (SB-1 through SB-16) within the soil impact area and one soil boring (BG) within the area in close proximity, but outside of the spill area in an attempt to delineate the extent of soil impact and potential groundwater impacts. The locations of the soil borings are depicted on the Overview of the Spill Area and Boring Location Map in Appendix A.

The subcontracted driller advanced the borings via flight augers to depths ranging from zero to 22 feet below ground surface (bgs) with the intent to delineate the vertical area of impact, five feet beyond the known area of impact[1], per NMOCD directives. As indicated above, in lieu of groundwater, soil samples were collected from five feet below the known area of soil impact. Additionally, soil collected from SB-6 exhibited the deepest concentrations of chloride (1,180 mg/kg at six to eight feet bgs) above the NMOCD approved criteria. As such, this soil boring was selected for further vertical delineation in an effort to identify potential groundwater impacts. Based on the analytical data, chloride concentrations were first identified below the NMOCD specified criteria at a depth of eight feet bgs (19.6 mg/kg). Therefore, KJE advanced the boring to 22 feet bgs. Groundwater was not encountered during the drilling activities; therefore, groundwater was not developed nor sampled during the sampling event.

Field screening for chloride concentrations and soil conductivity was conducted using a calibrated Hanna HI993310 soil conductivity meter. Field screening for Volatile Organic Compounds (VOCs) was conducted using a calibrated Photoionization Detector (PID) (Model RAE MINIRAE Lite 0-5K ppm) to screen for the highest readings from each of the borings. Photo documentation of field activities is included in Appendix C. The soil boring lithology and field screening data table (Table 1) is included in Appendix B for review. Due to the uniformity in lithology, representative boring logs are also provided in Appendix D.

3.2 Deviations from the Scope

Soil borings were field adjusted due to the proximity of the pipelines and associated setback areas. Initial analytical data from soil borings SB3, SB4 and SB6 indicated that the vertical delineation distance from soil below the permissible chloride levels, was less than the NMOCD dictated five feet. Subsequently, soil borings for SB3 and SB6[2] were then replicated at the request of NMOCD on January 23, 2018, in an effort to provide adequate vertical delineation depths.

---

[1] Known area of impact is considered to be from the surface to the vertical depth of the first soil sample with confirmed chloride concentrations below the NMOCD approved criteria of 600 ppm.

[2] The NMOCD did not request a replicated soil boring for SB4, since the analytical data confirmed chloride impacts below the NMOCD criteria vertically for four feet.

4.0 Soil Sample Collection/Handling Procedures

Soil samples were collected based on field indicators, proximity to the boring termination depths, or depth of potential impact as noted above, and select samples were collected in four ounce laboratory supplied glass containers for laboratory analysis. The collected soil samples were placed in laboratory-supplied containers, labeled, placed in an insulated container with ice, providing a 4°C environment for sufficient preservation until delivery to Xenco Laboratories (a third-party, independent, and licensed environmental laboratory in Midland, Texas) accompanied by completed chain-of-custody. The sample collection and handling activities were conducted in accordance with USEPA Standard Operating Procedures and strict chain-of-custody protocols. Before and after installation of each of the soil borings, the drilling augers were decontaminated.

A representative amount of samples were collected for quality control/ quality assurance purposes. These samples are duplicate samples and referenced as DUP. The soil samples were analyzed for BTEX by SW-846 Method 8021B, Extended-Range TPH by SW-846 Method 8015 modified with extended range, and/ or Chlorides by EPA Method 300. These analytical methods are the EPA, NMOCD, and industry-approved standards used to determine the potential for soil contamination.

The sample results were compared to the NMOCD approved applicable criteria, as detailed below and in Appendix B.

5.0 Summary of Analytical Results

Soil Action Limits

The NMOCD required delineation of BTEX, Extended-Range TPH, and Chlorides for the spill area. Published values for BTEX and TPH were obtained from the NMOCD document "Guidelines for Remediation of Leaks, Spills, and Releases, 1993". Horizontal and vertical delineation values were determined to be 10 ppm Benzene, 50 ppm BTEX, and 5,000 ppm TPH since no groundwater or surface water was present in the site area. Verbal directives issued by NMOCD representative Ms. Olivia Yu indicated that chloride impacted soil was to be vertically and horizontally delineated to 600 ppm, with vertical delineation of soil below the 600 ppm mandated criteria to be maintained five feet beyond the first soil sample indicative of soil below the mandated criteria. See Figure A1 in Appendix A for soil borings locations and areas of exceedances. Analytical results are included on Table 1 in Appendix B for review. Laboratory reports are also included in Appendix E.

Soil Delineation – Analytical Data

Analytical soil data did not identify concentrations of BTEX or TPH above the laboratory method detection limit. Analytical soil data identified Chloride at concentrations up to 6,060 mg/kg (ppm); however, these concentrations were delineated to below 600 ppm, five feet beyond the known area of impact. Analytical data is included on Table 1 in Appendix B for review.

Based on the analytical data, soil above the applicable criteria has been identified at depths in the Spill Area ranging from zero to eight feet bgs. The estimated area of impacted soil is approximately 0.19 acres (8,454 square feet), and the estimated area of contaminated soil contour line is illustrated on Figure A2 in Appendix A. Based on the pipelines and associated buffer zones in the area, the estimated volume of accessible impacted soil in the Spill Area is 1,252 cubic yards. Based on the laboratory analytical results, delineation of impacted soils has been completed.

Analytical summary tables of the results are included in Appendix B. Copies of the laboratory analytical reports with chain-of-custody forms are included in Appendix E.

Groundwater

Groundwater was not encountered in the soil borings advanced, nor was it anticipated to be encountered. According to records obtained from the New Mexico Office of the State Engineer's office Hydrology Bureau records, the minimum depth to water for the water well located closest to the release area was for a well located in the southeast corner of Section 9. In 1996 the depth to water was reported at 174 feet. As such and based on the analytical data, which explored soil borings to depths five feet below the known areas of impact and twelve feet beyond the boring exhibiting the deepest vertical extent of chloride concentrations above the NMOCD criteria, potential groundwater impact was not anticipated. Additionally, because shallow groundwater is not known in the area and is not a source of drinking water, there is no complete exposure pathway to shallow groundwater. No use of groundwater is expected following Site remediation. Site remediation activities are not expected to encounter groundwater due to the depth of the groundwater at the Site. As such, KJE does not recommend further action regarding potential groundwater impact.

6.0 Risk Screening

6.1 Chemicals of Potential Concern

Chemicals of potential concern (COPCs) were initially identified as TPH, BTEX, and Chlorides. Following soil delineation activities and based on soil analytical data, TPH and BTEX have been eliminated as COPCs. As such, chloride has been identified as the only COPC. Analytical data from soil borings SB3, SB4, SB5, SB6, and SB8 exhibited chloride concentrations above the applicable NMOCD criteria in the Spill Area and are included in Table 1 below. Concentrations were compared to the NMOCD Action Limits, Pit and Recycling Containment Closures, and the New Mexico Environmental Department (NMED) Soil Screening Levels issued December 2014 and July 2015.

Action Limits and Closure Requirements Assumes Depth To Water is > 100 feet							

*These soil borings were replicated to provide adequate vertical delineation depths.

6.2 Exposure Pathways

Potential exposure pathways for the COPCs at the Site include ingestion and dermal contact with COPCs via soil, groundwater, and surface water. There currently are no vapor phase COPCs; therefore soil gas is eliminated as a potential exposure pathway. Following remediation of onsite soils at the Site, there are expected to be no complete exposure pathways for ingestion or dermal contact with COPCs via soil, groundwater, and surface water. Each is discussed briefly below.

6.2.1 Soil

Following Site remediation, it is expected that there will be no complete exposure pathways to any remaining COPCs in soil at depth beneath the Site, with the exception of soil located within the pipeline easements and buffer zones. The potential exposure pathways to COPCs in soils are expected to occur during Site remediation when near-surface soils are disturbed. Those potential pathways include construction worker exposure to airborne dust, dermal contact with dust, and possible inadvertent ingestion. Measures to mitigate these potential exposures will be addressed in the Health and Safety Plan (HASP). COPCs in soil within the pipeline easements and buffer zones do not have a potential exposure pathway as these soil areas are not allowed to be disturbed until the pipelines need to be replaced or repaired. Chloride impacted soil exceeding criteria during remediation activities will be managed in accordance with the HASP and applicable regulations.

6.2.2 Surface Water

There is currently no direct contact of surface water with impacted soil, and all surface water exits the Site as storm water. There is no surface water at the Site and, therefore, no pathway for exposure. Similarly, following Site redevelopment, it is expected that there will be no complete exposure pathway to surface water. During remediation, surface water is expected to percolate into Site soils; measures to mitigate surface run-off will be mitigated utilizing berms and poly-liners.

6.2.3 Groundwater

As discussed above, the depth of potential impact has been explored and delineated for the spill area and groundwater was not encountered nor is groundwater a source of drinking water. Additionally, shallow groundwater is not known in the area; therefore, there is no complete exposure pathway to shallow groundwater. No use of groundwater is expected following Site remediation. Site remediation activities are not expected to encounter groundwater due to the depth of the groundwater at the Site.

7.0 Photographs

Photo documentation of the drilling and sampling activities are included in Appendix C.

8.0 Conclusions/Recommendations

KJE has concluded that the majority of the spill area has been delineated, and that there would be no beneficial outcome of installing additional soil borings in the spill area. KJE feels that we would only replicate analytical results from other nearby soil borings.

According to the records acquired from the New Mexico Office of the State Engineers database, it appears that there is at least 166 feet between the zones of impacted soil and groundwater. KJE feels that the chance of groundwater contamination from the impacted soil is highly unlikely.

Based on the following reasoning, KJE requests that the majority of the impacted soils, primarily south of the OWL saltwater line, in the spill area be allowed to remain in place, as further discussed below, since groundwater is determined to be at a depth unlikely to be impacted by the release:

- the majority of the impacted soil is located adjacent to, or below one of four operating pipelines (OWL saltwater line, Energy Transfer gas line, Kinder Morgan Gas Line, and nearby ranch drinking water). Excavation in these areas could adversely affect the structural integrity of one or all of these pipelines. As such, areas of chloride impact within these areas will be deferred, as detailed below.

- adverse environmental impacts are minimal,
  - little vegetation was present in the area due to the sandy soils, and the right of way (ROW) is being used as the route for 24-hour OWL pipeline inspectors
  - there is no noticeable impact to wildlife
  - there are no residences in the site area
  - there are no buildings in the site area for vapor intrusion consideration
  - there is no ongoing air quality impact
  - construction worker exposure would be primarily chlorides and addressed via the HASP during remediation activities
- the small total volume (1,252 cubic yards) of accessible impacted soil in the spill area will be remediated based on KJE recommendations.

Two small areas of accessible chloride impacted soil were identified within the Spill Area with analytical results above the NMOCD action levels for chloride. KJE proposes that the accessible impacted soil areas be excavated by OWL in the areas where chlorides exceed 600 ppm up to a depth of 4' (approximately 1,252 cubic yards), and placed on 20 mil poly sheeting in the excavation, as depicted in Figure A2. Trench anchors should be used to secure the poly sheeting. OWL will blend the impacted soil with clean soil, and KJE will collect one sample for every 25 cubic yards of blended soil to ensure remediation compliance with the NMOCD directive of 600 ppm. OWL will then return the soil to the poly-lined excavation. Confirmatory soil samples will be collected along the sidewalls of the excavation only, for horizontal delineation confirmation. Confirmatory soil samples will not be collected along the sidewalls adjoining the requested deferral area, further discussed below.

No excavation will be completed within the designated buffer zone set forth by each individual pipeline owner on each side of the pipeline easements, to maintain the structural stability of the pipelines. As such, KJE respectfully requests deferral of the NMOCD requirements to complete further investigations and remediation for Case No. 1RP 4860 adjacent to and below the subject pipeline, and within the respective setback areas, which corresponds to two areas. These areas correspond to approximately 202,390 square feet. The GPS coordinates of the extent of these two areas are 32.065321° N, -103.275404°W, 32.0656266°N, -103.275404°W, 32.065478°N, -103.272597°W, 32.065424°N, -103.272584°W, 32.065219°N, -103.275404°W, 32.064647°N, -103.275404°W, 32.065359°N, -103.272584°W, and 32.064670°N, -103.272584°W, which are illustrated on the attached Sheet A2. OWL and KJE request that the remediation be delayed until the pipelines are removed or relocated in the future to prevent possible damage to, or reduction of the pipeline structural integrity which could cause an additional spill. When the pipelines are removed or relocated in the future, OWL will contact NMOCD to discuss required investigations, or remediation which may or may not be required at that time.

Disturbed areas outside of the easement will be reseeded with BLM mix to reestablish growth. Due to vegetative growth restrictions imposed by the pipeline owners, the easement will not be seeded.

Regarding groundwater, based on review of available groundwater data, in conjunction with KJE's soil analytical data, KJE has opined that groundwater impact is unlikely; therefore, further action regarding groundwater is not required.

If we can be of further assistance, please do not hesitate to contact us at 940-387-0805. Thank you for the opportunity to provide professional environmental consulting services. It has been a pleasure working with you.

9.0 Qualifications of Environmental Professional

This is to certify that the Environmental Investigation that was completed at the produced water spill site located approximately five miles southwest of Jal in Lea County, New Mexico were conducted using EPA, NMOCD, and industry-approved standards/protocols. This field work was conducted from January 10 through January 23, 2018 for OWL, and all field activities were completed under the supervision of Ms. Dena M. Vandenberg, REM, LEED AP. Mr. Ware's and Ms. Vandenberg's credentials are included in Appendix E for review.

Project Address: Jal NM

Phillip Sanders:

We are reporting to you the results of the analyses performed on the samples received under the project name referenced above and identified with the XENCO Report Number(s) 573594. All results being reported under this Report Number apply to the samples analyzed and properly identified with a Laboratory ID number. Subcontracted analyses are identified in this report with either the NELAC certification number of the subcontract lab in the analyst ID field, or the complete subcontracted report attached to this report.

Unless otherwise noted in a Case Narrative, all data reported in this Analytical Report are in compliance with NELAC standards. The uncertainty of measurement associated with the results of analysis reported is available upon request. Should insufficient sample be provided to the laboratory to meet the method and NELAC Matrix Duplicate and Matrix Spike requirements, then the data will be analyzed, evaluated and reported using all other available quality control measures.

The validity and integrity of this report will remain intact as long as it is accompanied by this letter and reproduced in full, unless written approval is granted by XENCO Laboratories. This report will be filed for at least 5 years in our archives after which time it will be destroyed without further notice, unless otherwise arranged with you. The samples received, and described as recorded in Report No. 573594 will be filed for 45 days, and after that time they will be properly disposed without further notice, unless otherwise arranged with you. We reserve the right to return to you any unused samples, extracts or solutions related to them if we consider so necessary (e.g., samples identified as hazardous waste, sample sizes exceeding analytical standard practices, controlled substances under regulated protocols, etc).

We thank you for selecting XENCO Laboratories to serve your analytical needs. If you have any questions concerning this report, please feel free to contact us at any time.

Respectfully,

Kelsey Brooks
Project Manager

Sample receipt non conformances and comments:

Sample receipt non conformances and comments per sample:

None

Analytical non conformances and comments:

Batch: LBA-3038415 BTEX by EPA 8021B
Soil samples were not received in Terracore kits and therefore were prepared by method 5030.
Lab Sample ID 573594-001 was randomly selected for Matrix Spike/Matrix Spike Duplicate (MS/MSD). Ethylbenzene, m,p-Xylenes, o-Xylene recovered below QC limits in the Matrix Spike and Matrix Spike Duplicate. Outlier/s are due to possible matrix interference. Samples in the analytical batch are: 573594-001, -002, -003, -004, -005, -006, -007, -008, -009, -010, -011, -012, -013, -014, -015, -016, -017, -018, -019.
The Laboratory Control Sample for m,p-Xylenes, Ethylbenzene, o-Xylene is within laboratory Control Limits, therefore the data was accepted.

Batch: LBA-3038601 BTEX by EPA 8021B
Soil samples were not received in Terracore kits and therefore were prepared by method 5030.

Batch: LBA-3038602 BTEX by EPA 8021B
Soil samples were not received in Terracore kits and therefore were prepared by method 5030.

Batch: LBA-3038608 BTEX by EPA 8021B
Soil samples were not received in Terracore kits and therefore were prepared by method 5030.

Batch: LBA-3038661 Chloride by EPA 300
Lab Sample ID 573594-007 was randomly selected for Matrix Spike/Matrix Spike Duplicate (MS/MSD). Chloride recovered above QC limits in the Matrix Spike. Outlier/s are due to possible matrix interference. Samples in the analytical batch are: 573594-001, -002, -003, -004, -005, -006, -007, -008, -009, -010, -011, -012, -013, -014, -015, -016.
The Laboratory Control Sample for Chloride is within laboratory Control Limits, therefore the data was accepted.

Flagging Criteria

X In our quality control review of the data a QC deficiency was observed and flagged as noted. MS/MSD recoveries were found to be outside of the laboratory control limits due to possible matrix /chemical interference, or a concentration of target analyte high enough to affect the recovery of the spike concentration. This condition could also affect the relative percent difference in the MS/MSD.

B A target analyte or common laboratory contaminant was identified in the method blank. Its presence indicates possible field or laboratory contamination.

D The sample(s) were diluted due to targets detected over the highest point of the calibration curve, or due to matrix interference. Dilution factors are included in the final results. The result is from a diluted sample.

E The data exceeds the upper calibration limit; therefore, the concentration is reported as estimated.

F RPD exceeded lab control limits.

J The target analyte was positively identified below the quantitation limit and above the detection limit.

U Analyte was not detected.

L The LCS data for this analytical batch was reported below the laboratory control limits for this analyte. The department supervisor and QA Director reviewed data. The samples were either reanalyzed or flagged as estimated concentrations.

H The LCS data for this analytical batch was reported above the laboratory control limits. Supporting QC Data were reviewed by the Department Supervisor and QA Director. Data were determined to be valid for reporting.

K Sample analyzed outside of recommended hold time.

JN A combination of the "N" and the "J" qualifier. The analysis indicates that the analyte is "tentatively identified" and the associated numerical value may not be consistent with the amount actually present in the environmental sample.

** Surrogate recovered outside laboratory control limit.

BRL Below Reporting Limit.

RL Reporting Limit

MDL Method Detection Limit **SDL** Sample Detection Limit **LOD** Limit of Detection

PQL Practical Quantitation Limit **MQL** Method Quantitation Limit **LOQ** Limit of Quantitation

DL Method Detection Limit

NC Non-Calculable

+ NELAC certification not offered for this compound.

***** (Next to analyte name or method description) = Outside XENCO's scope of NELAC accreditation

Notice: Signature of this document and relinquishment of samples constitutes a valid purchase order from client company to Xenco, its affiliates and subcontractors. It assigns standard terms and conditions of service. Xenco will be liable only for the cost of samples and shall not assume any responsibility for any losses or expenses incurred by the Client if such losses are due to circumstances beyond the control of Xenco. A minimum charge of $75 will be applied to each project. Xenco's liability will be limited to the cost of samples. Any samples received by Xenco but not analyzed will be invoiced at $5 per sample. These terms will be enforced unless previously negotiated under a fully executed client contract.

EDUCATION

M.S., Environmental Engineering
Oklahoma State University, Stillwater, Oklahoma

B.S., Environmental Science
University of Oklahoma, Norman, Oklahoma

WORK EXPERIENCE

KJ Environmental Mgt., Inc.
Denton, Texas

President **– (December 2005 to Present)**

- Environmental compliance audits of large scale industrial and manufacturing plants
  - Air, water, waste, EPA reporting, etc….
- Hazardous Waste Management
  - Hazardous waste audits & management plans for thirty different industries
  - Designing process modifications for industrial clients to reduce waste (P2)
- Hazardous waste remediation
  - Soil & groundwater cleanup
    (Chlorinated solvents -lumber treating operation, Broken Bow, OK)
  - Soil & surface water cleanup
    (Lead contamination - natural gas pipeline, Madill, OK)
- Air permitting
  - Major source air permit applications for several large industries
- Phase I and Phase II Environmental Site Assessments
- Wetland delineation studies
- Storm water pollution prevention management (construction and industrial facilities)
- Expert witness

GaiaTech, Inc.
Irving, Texas

Senior Environmental Consultant **– (August 2005 to December 2005)**

- Performed Environmental Compliance, safety and engineering audits for various large-scale industrial/commercial clients
  - air, water, hazardous waste, safety, etc.
- Designed waste minimization system to lower operating costs for businesses
  - i.e., wastewater recycling project

Isbell Engineering Group, Inc.
Sanger, Texas

Senior Environmental Engineer – (July 2003 to August 2005)

- Completed environmental compliance and safety audits for industrial clients
- Performed Phase I Environmental Site Assessments – Due Diligence
- Reviewed engineering designs for a fire suppression system at a FEMA facility
- Directed environmental investigations for waste dump sites
- Designed utility (water/sanitary sewer) lines for subdivisions and other developments
- Assisted in the development of civil engineering construction plans for small medical offices/facilities
- Assisted in the review of City Engineering plans for small municipalities
- Assisted in the design and construction management of a 200,000 gal/day municipal-related wastewater treatment plant

Science Applications International (SAIC)
Midwest City, Oklahoma

Environmental Engineer – (May 2003 to July 2003)

- **Created Site Health & Safety Plan for Air Force Remediation Project (Tinker AFB)**
- **Field Safety Manager for groundwater monitoring project (Tinker AFB)**

Marshall Environmental Management, Inc.
Oklahoma City, Oklahoma

Environmental Specialist – (November 1999 to May 2003)

- **Facility-wide noise survey (FAA Facility- Will Rogers Airport, Oklahoma)**
- **Industrial Hygiene Studies – Tinker, AFB**
- **Lead-based paint analysis & remediation design of base housing (Vance AFB, OK)**
- Project Supervisor for cleanup and disposal of hazardous material spills
    - Emergency Response situations

Department of Environmental Quality (Oklahoma)
Oklahoma City, Oklahoma

Environmental Specialist – (July 1999 to November 1999)

- Trained and informed businesses of pollution prevention techniques
- Explained the applicability of environmental regulations to specific industrial sectors and regulated entities

CERTIFICATIONS AND LICENSES

- Engineer-In-Training (EIT)
- Qualified Environmental Professional – (Institute of Professional Practice)
- Registered Professional Environmental Specialist (Oklahoma)

OTHER

- **Routine Guest Lecturer for Southwest Oklahoma State Aviation Safety Classes at Tinker AFB, Midwest City, OK**

James Lawrence Fox

PROJECT MANAGER

WORK HISTORY

Project Manager

KJ Environmental Management, Inc.
2014 – Present

I am currently working as a Project Manager at KJ Environmental in Cross Roads, Texas. I have over three years of experience in the environmental field. I provide regulatory compliance services for various industries including oil and gas storage and trucking facilities, sand and gravel mining facilities, and manufacturing facilities. My areas of expertise include project management, wetland determination and delineation, construction and industrial storm water pollution prevention plans (SWPPP), management of PST tank pulls, oil pollution prevention compliance (SPCC), asbestos sampling and assessments, Phase I Environmental Site Assessments, Limited Phase II Environmental Site Assessments, and Naturally Occurring Radioactive Material (NORM) surveys. I have also served as the Project Manager for oil & gas production and commercial saltwater disposal clients in handling multiple produced water spill investigations and remediation activities completed under the jurisdiction of the Railroad Commission of Texas. I currently work as a Project Manager to complete projects for a variety of industries, while ensuring the delivery of the highest quality work product, customer service, and professionalism.

Environmental Scientist

Trinity River Authority of Texas (TRA)
2013 - 2014

At TRA, I conducted surface water sampling throughout the Trinity River Basin. Under the Planning and Environmental Services Special Studies and Assessments Manager, I handled a variety of tasks related to field data collection, field gear and sampling equipment preparation/maintenance, and data quality assurance/analysis. I worked within an interdisciplinary scientific team in both field and office settings. The job was physically demanding in harsh, outdoor environments. Main field studies included biological surveys, water quality sampling, geomorphological and hydrological surveys.

Field Technician

Texas Forest Service (TFS)
2009-2013

At TFS, I conducted various types of tree surveys for exotic invasive trees and insects throughout east Texas. I became very experienced in identifying woody plants and herbaceous species of Texas. I was certified for Wildland firefighting and assisted the U.S. Forest Service in prescribed burnings. I specifically aided in research and control of the southern pine beetle (*Dendroctonus frontalis*), Ips bark beetle (I*ps grandicollis, calligraphus and avulsus*), Nantucket pine tip moth (*Rhyacionia frustrana*) for the Texas Forest Service.

Military Service

United States Marine Corps
2004-2010

I served in Fallujah, Iraq with the 14th Marines in 2006 - 2007. During that time, I was awarded medals of combat action, Marine Corps Reserve select, Global war on terrorism, Iraq campaign medal, Sea service deployment, national defense service, Navy unit commendation, and armed forces reserve. My occupational specialty was an Automotive Maintenance Technician for the High Mobility Multipurpose Wheeled Vehicle (HMMWV), and the Medium Tactical Vehicle Replacement (MTVR). During my time in Fallujah, I assisted in planning and security of hundreds of convoys for multiple platoons of infantry Marines. I also routinely drove the lead patrol vehicle with an Improvised Explosive Devise (IED) / Mine sweeper attachment on a 7-ton vehicle.

EDUCATION

University of Stephen F. Austin
Bachelor of Science in Forestry with a focus in Wildlife Management
2009 – 2013

Activites and Societies:
Ducks Unlimited
Wildlife Society

ADDITIONAL INFORMATION

Professional Education & Certifications:

HAZWOPER 40 HR Certification
Certified Asbestos Inspector (Certificate No. 15039)
Certified NORM Surveyor
USACE Wetland Delineation 40 HR Training Course
Red Card certified for Wildland firefighting
SPCC/FRP Compliance Workshop, EPA Region 6

Affiliations:

Planning and Zoning Committee member for the City of Sanger, Texas
Parks and Recreation Committee member for the City of Sanger, Texas
Society of Texas Environmental Professionals

PROFESSIONAL EXPERIENCE:

KJE Environmental & Civil Engineering 2016 – Present

KJ Environmental Management, Inc. (KJE) is a dedicated, full-service environmental and civil engineering consulting firm located on the north side of the Dallas-Fort Worth metroplex. KJE is comprised of a team of professionals who strive to provide creative and cost effective solutions for today's multi-faceted environmental and civil engineering issues.

Senior Project Manager – Primary projects include Phase II Environmental Site Assessments, SPCC Plans, Stormwater Pollution Prevention Plans, and Oil and Gas Permitting.

Sage Environmental Consulting, L.P., Richardson, TX 2011 - 2016

Sage Environmental Consulting provides environmental project management and consulting services nationwide. Role was to manage soil and groundwater investigation projects and remediation, Due Diligence projects, Spill Prevention, Control, and Countermeasure (SPCC) Plans, and Storm Water Pollution Prevention Plans (SWPPP).

Senior Project Manager

- Developed and managed a fugitive gas emissions program for all New Source Performance Standard (NSPS) OOOO and Subpart W regulated equipment. The client was a Major Global Oil Company and project sites consisted of their Onshore USA Assets.
- Implemented best practices using Optical Gas Imaging (OGI) and FLIR GF320 Infrared Cameras to inspect all onshore equipment to identify any fugitive gas emission leak sources.
- Developed a Master Fugitive Emissions Program Plan and provided to all the assets, which included procedures, training, and methods for maintaining the program. Managed implementation by client supervisors at various locations throughout Texas and Louisiana.

Due Diligence Manager

- Managed teams of personnel who conducted due diligence site inspections for over 1,200 oil and gas wells and 67 tank batteries in less than two weeks across four separate regions of Texas.
- Reviewed Texas Commission on Environmental Quality (TCEQ) and Railroad Commission of Texas (RRCT) records, and aerial and site photographs for details and/or evidence of site contamination.
- Calculated estimated remediation costs for 49 separate tank batteries and well locations.

Senior Project Manager

- Proposed, Conducted, and Managed surface and subsurface spill investigations and remediation, and completed over 1,000 SWPPP and SPCC Plans.

Senior Project Manager

- Scheduled, Managed, and Performed Optical Gas Imaging (OGI) inspections utilizing FLIR (Forward Looking Infrared Radiometer) GF320 infrared cameras on offshore oil platforms in The Gulf of Mexico near Texas and Louisiana coasts.

Terracon Consultants, Inc., Enercon Services, Inc., Cirrus Associates, LLC., Fugro Consultants, Inc., Geoscience Consultants International, and Mas-Tek Engineering, Inc., **Dallas/Fort Worth, TX** 2009 - 2011

Civil Engineer / Professional Geoscientist / Project Manager: (Independent Consultant)
Primary projects included The North Tarrant Expressway in Fort Worth; the LBJ Freeway Managed Lanes in Dallas; and The Trinity River Levee and Floodplain investigation for The US Army Corp of Engineers.

- Conducted logging of drill holes and core holes to determine site specific lithology.
- Installed piezometers, developed monitor wells, and performed slug tests to determine the aquifer transmissivity and storativity for multiple monitoring wells.
- Conducted field soil tests, performed packer tests, installed piezometers, and recorded data from downhole pressure transducers.
- Assisted with CPT (Cone Penetrometer Testing) operator performing seismic survey tests, pore pressure dissipation tests, and dilatometer tests.
- Performed various other engineering projects on a contract basis. SPCC Plans, SWPPP, and Phase I or Phase II Environmental Site Assessments (ESAs) were additional responsibilities.

Talon/LPE, Inc., Carrollton, TX 2008 – 2009

Senior Engineer / Project Manager
- Managed, supervised, and conducted all project activities, including well/boring logging, development and sampling of groundwater monitoring wells; soil sample collection; waste classification and disposal; hydrogeologic characterizations; and preparing groundwater monitoring and corrective action plans.
- Designing, installed, and monitored the effectiveness of remediation systems. Performed these projects, as well as Phase I and II ESAs, for major oil, communication, utility, real estate, municipal, retail, and financial clients.
- Performed site visits and prepared SWPPP/SPCC Plans to maintain clients' regulatory compliance.

Terra-Solve, Inc., Carrollton, TX 1996 - 2008

Project Manager / Civil Engineer
- Managed, supervised, and conducted over 550 projects in 16 states. Coordinated field investigation activities, including scheduling and procurement of subcontract labor and necessary materials.
- Conducted well and boring logging at numerous sites in Texas, New Mexico, Oklahoma, and Arkansas. For these projects the lithologic units were described using the Unified Soil Classification System (USCS), conducted field screening for various geotechnical and analytical parameters, and prepared soil samples for shipping to testing laboratories in various states.
- Conducted Dual-Phase Extraction and aquifer tests, analyzed the recorded data and completed the required analytical reports. Performed these projects, as well as Phase I and II Environmental Site Assessments (ESAs), for major oil, communication, utility, real estate, municipal, retail, and financial clients.
- Designed remediation systems, supervised system installations, and monitored the effectiveness of various types of remediation systems.
- Performed site visits and prepared SWPPP/SPCC Plans to maintain clients' regulatory compliance.
- Provided construction management and engineering/construction inspection services over a five year period for a local municipality and Habitat For Humanity which included asphalt and concrete roadway construction, railroad crossings, utility installations, bridge construction, and sanitary sewer lift station construction.

EDUCATION, PROFESSIONAL REGISTRATIONS & TRAINING:

Education: B.S. *Petroleum Engineering*, **Texas Tech University**, Lubbock, TX

Professional Registrations:

- Licensed Professional Engineer (P.E.), (License No. 88441), Texas
- Licensed Professional Engineering Firm, (License No. 17779), Texas
- Licensed Professional Engineer (P.E.), (License No. 21593), New Mexico
- Licensed Professional Geoscientist (P.G.), (License No. 6264), Texas
- Licensed Professional Geoscientist (P.G.), (License No. 1051), Louisiana
- UST Remediation Consultant (License No. 60), Oklahoma
- Corrective Action Project Manager (CAPM No. 799), TCEQ
- Transportation Worker Identification Credential (TWIC), Transportation Safety Administration (TSA)

Certifications and Continuing Education:

- Occupational Safety and Health Administration (OSHA) Training for Hazardous Waste Operations, Supervisor Level, (40 Hour Course and Annual Refreshers)
- Basic Plus Safety and Annual Refreshers
- Wastewater and Stormwater Permitting and Compliance Seminars, TCEQ
- Produced Water Production Conference, Society of Petroleum Engineers
- Air Permitting Basics and Advanced Air Permitting, Sage Environmental Consulting

- Project Manager Professional Training (PMP), D and L Training

Dena Marie Vandenberg, REM, LEED AP
ENVIRONMENTAL PROFESSIONAL

WORK HISTORY

Chief Operating Officer / Director of Environmental Services
KJ Environmental Management, Inc.
June 2011 – Present (5 years, 2 months)

I am currently working as the Chief Operating Officer / Director of Environmental Services at KJ Environmental in Cross Roads, Texas. I have over eleven years of experience as an environmental professional in consulting. I lead a team of Engineers and Scientists to complete projects for a variety of industries, while ensuring the delivery of the highest quality work product, customer service, and professionalism.

Project Manager
KJ Environmental Management, Inc.
April 2010 – June 2011 (1 year 3 months)

When I began working at KJ Environmental in Denton, Texas as a Project Manager, I provided regulatory compliance services for various industries including oil and gas storage and trucking facilities, sand and cement handling facilities, manufacturing facilities, and municipal agencies. My areas of expertise included project management, construction and industrial storm water pollution prevention plans (SWPPP), NPDES/TPDES permit applications, management of PST tank pulls, oil pollution prevention compliance (SPCC), Permit-By-Rule (PBR) Applications, New Source Review (NSR) Applications, Barnett Shale Phase I & Phase II Special Emissions Inventories, Saltwater Disposal Well Permitting, Underground Injection Control Permitting, TCEQ Public Water System compliance, drinking water, storm water, ground water, and waste sampling, asbestos sampling, mold assessments, radon testing, lead-based paint sampling, lead in drinking water sampling, Phase I Environmental Site Assessments, Limited Phase II Environmental Site Assessments, noise monitoring, and brownfield redevelopment. I have also served as the Environmental Professional on record for oil & gas production and commercial saltwater disposal clients in handling multiple produced water spill investigations and remediation activities completed under the jurisdiction of the Railroad Commission of Texas.

Environmental Scientist
Terracon
Privately Held; 1001-5000 employees; Civil Engineering industry
April 2006 – February 2010 (3 years 11 months)

At Terracon, I conducted hundreds of Phase I ESAs for various types of properties from vacant land to industrial/manufacturing facilities and gas stations. I also did regulatory compliance consulting for oil & gas clients, industrial/manufacturing facilities, and municipalities. I completed SWPPPs and SPCCs, conducted storm water sampling, and operated a public water system on behalf of a municipality. I became a licensed Asbestos Inspector, Mold Assessment Technician, and LEED Accredited Professional.

Environmental Geologist
Cirrus Associates
March 2006 – March 2006 (1 month)

At Cirrus Associates, I acted as a contract employee on a VCP project for a client in Odessa, Texas. I conducted sampling of groundwater monitoring wells using low-flow sampling techniques.

Environmental Scientist
Delta Environmental
August 2004 – December 2005 (1 year 5 months)

At Delta Environmental, I worked conducted public drinking water sampling under a mulitmillion dollar TCEQ contract. I collected over 3,000 drinking water samples with a 99.8% laboratory acceptance rate. I was recognized as one of the top 5 samplers in the state for productivity and was trusted with the responsibility of training other samplers associated with the project. In addition, I conducted several ESAs to obtain more experience, when time would allow.

EDUCATION

University of North Texas
Bachelor of Science in Geography with a focus in Earth Science, Geology Minor
1999 – 2004

Activities and Societies:
Vice Chairman of the Planning & Zoning Commission for the Town of Providence Village, Texas
Delta Zeta Sorority

RECEIVED
By Olivia Yu at 1:54 pm, Nov 01, 2017

Describe Cause of Problem and Remedial Action Taken.*

A threaded nipple blew off at a pigging station. OWL employees replaced a valve and brought equipment on site to construct earthen berms preventing the spill from migrating.

Describe Area Affected and Cleanup Action Taken.*

Vacuum trucks were brought on site to recover fluids and 20 millimeter poly sheeting was placed over affected soil to prevent rainfall from causing further migration until an investigation work plan is approved by OCD.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to NMOCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the NMOCD marked as "Final Report" does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to ground water, surface water, human health or the environment. In addition, NMOCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.

Photo Exhibit

Photo No. 001. View of the source of the release on 10/24/17. The background is of a pre-constructed pit (East Pit) that held a portion of the released produced water.

Photo No. 002. View of the second pre-constructed pit (West Pit) adjacent to the East Pit. New piping that was scheduled for installment is seen in the background. The west pit also held a large portion of the released produced water.

Photo No. 003. View of the spill path the produced water took west downhill eventually migrating south toward the area covered by poly in the background.

Photo No. 4. View of affected soil (north covered area) that was covered by 20 millimeter poly sheeting to prevent rainfall from causing further migration.

Photo No. 5. View of affected soil (south covered area) that was covered by 20 millimeter poly sheeting to prevent rainfall from causing further migration. NOTE: The NM811 identified multiple pipelines running parallel to the established caliche road.

Photo No. 6. View looking west of the caliche road transecting the spill area.

Operator/Responsible Party,

The OCD has received the form C-141 you provided on _10/31/2017_ regarding an unauthorized release. The information contained on that form has been entered into our incident database and remediation case number _1RP-4860__ has been assigned. **Please refer to this case number in all future correspondence.**

It is the Division's obligation under both the Oil & Gas Act and Water Quality Act to provide for the protection of public health and the environment. Our regulations (19.15.29.11 NMAC) state the following,

> *The responsible person shall complete division-approved corrective action for releases that endanger public health or the environment. The responsible person shall address releases in accordance with a remediation plan submitted to and approved by the division or with an abatement plan submitted in accordance with 19.15.30 NMAC.* [emphasis added]

Release characterization is the first phase of corrective action unless the release is ongoing or is of limited volume and all impacts can be immediately addressed. Proper and cost-effective remediation typically cannot occur without adequate characterization of the impacts of any release. Furthermore, the Division has the ability to impose reasonable conditions upon the efforts it oversees. **As such, the Division is requiring a workplan for the characterization of impacts associated with this release be submitted to the OCD District _1_ office in __Hobbs____ on or before _12/1/2017_. If and when the release characterization workplan is approved, there will be an associated deadline for submittal of the resultant investigation report. Modest extensions of time to these deadlines may be granted, but only with acceptable justification.**

The goals of a characterization effort are: 1) determination of the lateral and vertical extents along with the magnitude of soil contamination. 2) determine if groundwater or surface waters have been impacted. 3) If groundwater or surface waters have been impacted, what are the extents and magnitude of that impact. 4) The characterization of any other adverse impacts that may have occurred (examples: impacts on vegetation, impacts on wildlife, air quality, loss of use of property, etc.). To meet these goals as quickly as possible, the following items must, at a minimum, be addressed in the release characterization workplan and subsequent reporting:

● Horizontal delineation of soil impacts in each of the four cardinal compass directions. Adsorbed soil contamination must be characterized for the following constituents using the associated laboratory methods: benzene, toluene, ethylbenzene, and total xylenes by either Method 8260 or 8021, total petroleum hydrocarbons by Method 8015 extended range (GRO+DRO+MRO; C_6 thru C_{36}), and for chloride by Method 300. This is not an exclusive list of potential contaminants. Analyzed parameters should be modified based on the nature of the released substance(s). Soil sampling must be both within the impacted area and beyond.

● Vertical delineation of soil impacts. Adsorbed soil contamination must be characterized for the following constituents using the associated laboratory methods: benzene, toluene, ethylbenzene, and total xylenes by either Method 8260 or 8021, total petroleum hydrocarbons by Method 8015 extended range (GRO+DRO+MRO; C_6 thru C_{36}), and for chloride by Method 300. As above, this is not an exclusive list of potential contaminants and can be modified. Vertical characterization samples should be taken at depth intervals no greater than five feet apart. Lithologic description of encountered soils must also be provided. At least ten vertical feet of soils with contaminant concentrations at or below these values must be demonstrated as existing above the water table.

● Nominal detection limits for field and laboratory analyses must be provided.

● Composite sampling is not generally allowed.

● Field screening and assessment techniques are acceptable (headspace, titration, EC [include algorithm for validation purposes], EM, etc.), but the sampling and assay procedures must be clearly defined. Copies of field notes are highly desirable. A statistically significant set of split samples must be submitted for confirmatory laboratory analysis, including the laterally farthest and vertically deepest sets of soil samples. Make sure there are at least two soil samples submitted

for laboratory analysis from each borehole or test pit (highest observed contamination and deepest depth investigated). Copies of the actual laboratory results must be provided including chain of custody documentation.

●Probable depth to shallowest protectable groundwater and lateral distance to nearest surface water. If there is an estimate of groundwater depth, the information used to arrive at that estimate must be provided. If there is a reasonable assumption that the depth to protectable water is 50 feet or less, the responsible party should anticipate the need for at least one groundwater monitoring well to be installed in the area of likely maximum contamination.

● If groundwater contamination is encountered, an additional investigation workplan may be required to determine the extents of that contamination. Groundwater and/or surface water samples, if any, must be analyzed by a competent laboratory for volatile organic hydrocarbons (typically Method 8260 full list), total dissolved solids, pH, major anions and cations including chloride and sulfate, dissolved iron, and dissolved manganese. The investigation workplan must provide the groundwater sampling method(s) and sample handling protocols. To the fullest extent possible, aqueous analyses must be undertaken using nominal method detection limits. As with the soil analyses, copies of the actual laboratory results must be provided including chain of custody documentation.

● Accurately scaled and well-drafted site maps must be provided providing the location of borings, test pits, monitoring wells, potentially impacted areas, and significant surface features including roads and site infrastructure that might limit either the release characterization or remedial efforts. Field sketches may be included in subsequent reporting, but should not be considered stand-alone documentation of the site's layout. Digital photographic documentation of the location and fieldwork is recommended, especially if unusual circumstances are encountered.

Nothing herein should be interpreted to preclude emergency response actions or to imply immediate remediation by removal cannot proceed as warranted. Nonetheless, characterization of impacts and confirmation of the effectiveness of remedial efforts must still be provided to the OCD before any release incident will be closed.

Re: Work Plan for the Characterization of Impacts Due to a Pipeline Release OWL SWD Operating, LLC Produced Water Pipeline Nearby Unit Letters M, N, C, D, Sections 9 and 4, T26S, R36E, Lea County, New Mexico – Case No. 1RP-4860

Dear Ms. Yu:

KJ Environmental Management, Inc. (KJE) proposes to perform the following environmental consulting services for OWL SWD Operating, LLC (OWL) for the delineation portion of the project.

Environmental Investigation

The proposed scope of work will consist of performing an Environmental Investigation to evaluate the presence/absence of environmental contaminants in the soil at the above-referenced produced water release location.

KJE understands that the goals of this Work Plan and characterization effort are: 1) Determination of the lateral and vertical extents along with the magnitude of soil contamination. 2) Determine if groundwater or surface waters have been impacted. 3) If groundwater or surface waters have been impacted, what are the extents and magnitude of that impact 4) The characterization of any other adverse impacts that may have occurred (ex. Impacts on vegetation, impacts on wildlife, air quality, loss of use of property, etc.).

The Investigation will consist of the following activities:

- KJE will contact New Mexico 811 to request that they communicate with underground utility companies in the site area for location of their pipelines beneath the site and the site area.

- Multiple soil borings will be installed to the maximum depth necessary to reach chloride and other constituent delineation levels as noted below (horizontal and vertical delineation), by Geoprobe. A site map (Figure A1) is attached showing the general location and extent of the release. The proposed soil boring locations are illustrated on attached Figure A2, but the quantity of borings and boring locations may be field adjusted due to onsite conditions. The drilling contractor will be using a five (5) foot split-spoon continuous sampling device to allow for sampling of soil at two and one half (2.5) foot intervals for laboratory analysis. The actual number of borings and number of samples collected for analysis will be determined in the field based on assessment of release areas and Geoprobe access points available.

- Horizontal delineation of soil impacts will be attempted in each of the four cardinal compass directions. Adsorbed soil contamination will be characterized for the following constituents using the associated laboratory methods: benzene, toluene, ethylbenzene, and total xylenes (BTEX) by either Method 8260 or 8021, total petroleum hydrocarbons (TPH) by Method 8015 extended range (GRO+DRO+MRO; C6 thru C36), and for chloride by Method 300. KJE understands that delineation to 10 ppm Benzene, 50 ppm BTEX, 5,000 ppm TPH, and 600 ppm chlorides horizontally is required. Soil sampling will be both within the impacted area and beyond as field determined.

- Vertical delineation of soil impacts will also be attempted. Adsorbed soil contamination will be characterized for the following constituents using the associated laboratory methods: benzene, toluene, ethylbenzene, and total xylenes (BTEX) by either Method 8260 or 8021, total petroleum hydrocarbons (TPH) by Method 8015 extended range (GRO+DRO+MRO; C6 thru C36), and for chloride by Method 300. As above, this is not an exclusive list of potential contaminants and can be modified if required by OCD. Vertical characterization samples should be taken at depth intervals no greater than five (5) feet apart. Lithologic description of encountered soils will also be provided. KJE understands that delineation to 10 ppm Benzene, 50 ppm BTEX, 5,000 ppm TPH, and 250 ppm chlorides vertically is required. At least ten (10) vertical feet of soils with contaminant concentrations at or below these values will be demonstrated as existing above the water table.

- In addition to the horizontal and vertical delineation borings, KJE will install one (1) soil boring upgradient of the release area to a depth of ten (10) feet and collect background samples at two and one half (2.5) foot intervals for laboratory analysis.

- Discrete, grab soil samples will be collected from each of the two and one half (2.5) foot intervals for laboratory analysis. A clean, decontaminated sampling trowel will be used to sample from each depth interval selected. For each soil boring, soil samples will be field screened using a calibrated Photo-ionization Detector (PID) (Model RAE MINIRAE 3000 Lite 0-15K ppm) for the highest reading for each boring. The sample with the highest PID reading and the sample collected at the bottom of each boring will be submitted for laboratory analysis.

- A statistically significant set of split samples will be submitted for confirmatory laboratory analysis, including the laterally farthest from the release sites and vertically deepest set of soil samples collected. In addition, we will ensure that there are at least two samples submitted for laboratory analysis from each boring (highest contamination from PID and deepest depth investigated).

- Each soil sample will be handled with nitrile-gloved hands. The samples will be placed in clean, dedicated, laboratory-supplied, 4-ounce glass containers, and labeled with pertinent sampling information. The soil samples will be then placed in a cooling chest with adequate ice, providing a 4°C environment for sufficient preservation until delivery to Xenco Laboratory (a third-party, NELAP Certified, independent, and licensed environmental laboratory in Midland, Texas). The sample collection and handling activities will be conducted in accordance with USEPA Standard Operating Procedures and strict chain-of-custody protocols. The drilling equipment, sampling equipment, and tools will be decontaminated before and between each sampling location. All personnel will use dedicated nitrile gloves that will be changed frequently during the drilling activities.

- For this investigation, groundwater is not anticipated to be encountered during environmental drilling. According to records obtained from the New Mexico Office of the State Engineer's office Hydrology Bureau records, the minimum depth to water for the water well located closest to the release area was for a well located in the southeast corner of Section 9, and in 1996 the depth to water was 174 feet. Water from this well is from the alluvial source which would be above the Triassic Chinle which is a water bearing zone above the Santa Rosa formation. The presence and/or depth of this potential water bearing formation are unknown in the spill area. KJE will install one (1) groundwater monitoring well to a depth of 50' past the deepest contamination to verify the presence or absence and depth, if applicable, of a shallow groundwater-bearing formation. The location of the groundwater monitoring well will be determined based on the initial laboratory analysis and will be advanced in the area of highest contamination.

- If groundwater is encountered in any of the soil borings, the boring will be left open for twenty-four (24) hours to determine if substantial water accumulates for sample collection and lab analysis. After 24 hours, KJE will attempt to collect a groundwater sample using a new disposable bailer and submit the samples for laboratory analysis of BTEX, TPH, and Chloride, if possible.

- Based on information provided by OWL the owner of the surface and subsurface estates that the release occurred on is EOG Natural Resources.

<u>Report of Findings</u>

KJE will prepare and provide an electronic copy of the final report describing the findings, conclusions, and recommendations from the Environmental Investigation. KJE will present the laboratory analytical results in a tabular format and compare these levels to the OCD specified delineation levels. Accurately scaled and well-drafted site maps will be provided showing the

location of all borings, monitoring wells, potentially impacted areas, and significant surface features including roads and site infrastructure that might limit either the release characterization or remedial efforts. Digital photographic documentation of the release location and field work will also be included.

If we can be of further assistance, please do not hesitate to contact us at 940-387-0805. We look forward to receiving comments in order to proceed with the project and closure.

Sincerely,

Gregg Bessire

Good morning Olivia!

Yes, soil sample SB4 8-10 was a split sample. I requested the lab confirm the discrepancy and will let you know if there was an error. I am updating and ID'ing sampling locations for both 1RP-4860 and 1RP-4820 site maps for your review and will submit those as soon as possible. Please let me know if you have any questions.

Thank you

James Fox

Ms. Vandenberg:

Confirmed. No additional vertical delineation will be required for SB-4. However, in reassessment,

please clarify the sample ID SB4 8-10 (1) and (2). Is this a pair of split samples? There is a large discrepancy in chloride concentrations.

Please complete sample collection of the other proposed delineation locations for 1RP-4860. Also, as conveyed to Mr. Fox during a phone conversation yesterday afternoon, given the provided data, subsequent delineation samples would not require BTEX or TPH analyses.

Good afternoon, Olivia!

Can you please confirm that we will not need to continue additional vertical delineation in the location of SB-4? Thank you!

Subject: RE: Update 1RP-4860 Lab Analysis BG, and SB 1-9

Mr. Fox:

In review of the preliminary data submitted for 1RP-4860, without a map demarcating sample locations in relation to the release point or to each other, NMOCD determines that both SB-3 and SB-6 will need additional vertical delineation. Please continue vertical delineation in the same borehole if possible. If not, establish the additional soil bore locations in the vicinity to represent the impacted area.

Please clarify: laboratory analyses were for 9 soil bores in the release area and 1 background sample location. The map identifying the samples for rush analysis had 11 locations circled.

Thanks,
Olivia

Subject: Update 1RP-4860 Lab Analysis BG, and SB 1-9

Good morning Ms. Yu,

Please see attached lab analysis for the Background sample, and Soil Borings 1-9 for 1RP-4860. Based on the lab analysis, Soil Boring 6 was exceeding the permissible chloride levels for vertical delineation to 10' depth at 834 mg/kg. In addition, Soil Boring 3 and 4 were not drilled to at least 5' past the point where the permissible level of Chlorides was reached. However, both Soil Borings 3 and 4 were clean to 4' past the point where the permissible level of Chlorides was reached. Would this be acceptable to OCD or would you like SB3 and SB4 redrilled?

I am planning on returning to 1RP-4860 after completing the remaining soil borings at 1RP-4820 on 1-23-18. I will drill adjacent to SB6 to reach the requested <600 mg/kg with 5' of maintained <600 mg/kg levels.

Please let me know if you have any questions. Thank you

James Fox
