Subject:	RE: Goodnight Midstream - Former DCP Pump Station Historical Release - Initial C-141 and Delineation Work Plan
Date:	Wednesday, June 13, 2018 4:09:00 PM
Attachments:	1RP5091.pdf approved_1RP5091_6.12.18 Compiled delineation workplan (002).pdf

Dear Mr. Leking:

Please note that NMOCD database indicates State surface and mineral ownerships. NMSLO can verify. If so, Like approval from NMSLO required for the proposed delineation plan.

The 1RP for this incident is

			Goodnight	Former DCP pump		
5091	6/13/2018	А	Midstream	station	22S-36E-4F	unknown

Please remember to include this 1RP identifier to all communications. Also, please be advised that a release characterization/delineation workplan as detailed in the attachment must be approved by NMOCD BEFORE any remediation work.

Also, NMOCD approves of the proposed delineation plan for 1RP-5091. For complete vertical delineation of TPH-impacted soil, 1 ft. further in depth is required to verify permissible levels of TPH was maintained.

Thanks,

Olivia Yu Environmental Specialist NMOCD, District I <u>Olivia.yu@state.nm.us</u> 575-393-6161 x113

OCD approval does not relieve the operator of liability should their operations fail to adequately investigate and remediate contamination that may pose a threat to ground water, surface water, human health or the environment. In addition, OCD approval does not relieve the operator of responsibility for compliance with any other federal, state, local laws and/or regulations.

Olivia

Etech is pleased to submit the above referenced documents for your review. The delineation work plan includes steps to further delineate chloride concentrations at the site. However, I request that this further chloride delineation be curtailed due to the very low initial chloride concentrations observed in initial delineation sampling, and the depth to ground water in excess of 200 feet. Please contact me with any questions or concerns. Thank you, Olivia.

Geoff Leking
