Dear Mrs. Bryant:

Terracon is pleased to submit four copies of the 2017 Annual Groundwater Monitoring Report for the above-referenced site.

We appreciate the opportunity to perform these services for Plains Pipeline, LP (Plains). Please contact either of the undersigned at (806) 300-0140 if you have questions regarding the information provided in the report.

Sincerely,
Terracon

1.0 INTRODUCTION

1.1 Site Description

Site Name	Livingston Line – Bob McCasland Site
Site Location	West of Loop 207 approximately 5 miles north-northeast of Eunice, Lea County, New Mexico.
General Site Description	Pipeline right-of-way surrounded by native pasture land, in close proximity of the former Carbon Black Plant.

Figure 1 presents the general boundaries and topography of the site on portions of the USGS topographic quadrangle map of Hobbs Southwest, New Mexico (Appendix A). Figure 2 is a site plan that indicates the approximate locations of the monitor wells in relation to the pertinent features, structures and general site boundaries (Appendix A).

1.2 Release Assessment Chronology

Below is a chronology of assessment and remedial activities to date as a result of the reported June 2001 crude oil release at the site.

- On July 13, 2001, an estimated release of 4 barrels (bbls) of crude oil was reported to the New Mexico Oil Conservation District (NMOCD). The release covered an area of approximately 1,600 square feet (sq. ft.) along a pipeline right-of-way and an adjacent caliche road. Initial excavation activities were reportedly conducted by Environmental Plus, Inc. (EPI) in an effort to stockpile saturated soils and expose the leak origin to facilitate repair of the pipeline. The pipeline excavation activities continued into December 2001. A total of approximately 11,445 cubic yards (cy) of hydrocarbon impacted soil were excavated and stockpiled at the site. Earthen berms were constructed around the stockpiles to prevent constituent runoff. Analytical results for soil samples collected from the excavation indicated benzene, toluene, ethylbenzene, and total xylyenes (BTEX) concentrations above New Mexico Oil Conservation Division (NMOCD) remedial threshold limits. A Soil Characterization Report and Remediation Plan Report, dated June 2006, by Environmental Plus, Inc. (EPI) was submitted to the NMOCD. This report detailed remediation activities conducted at the site, in-place soil concentrations, and

- recommendations for in-situ hydrocarbon-impacted soil closure;
- Investigation activities were conducted from August 16 through 22, 2001, which included the advancement of 17 exploratory soil borings. It was determined during this time that groundwater, approximately 30 feet below ground surface (bgs), had been impacted. Based on these field observations, three groundwater monitor wells (MW-1, MW-2 and MW-3) were installed proximate to the release area to evaluate the extent and magnitude of the release. Groundwater samples collected from the groundwater monitor wells exhibited concentrations of BTEX above applicable New Mexico Water Quality Control Commission (NMWQCC) Groundwater Standards. Subsequently, three additional groundwater monitor wells (MW-4, MW-5 and MW-6) were installed at the site. A measureable thickness of phase separated hydrocarbons (PSH) was detected in groundwater monitor well MW-4 following installation;
- To delineate the lateral extent of groundwater impact at the site, three additional groundwater monitor wells (MW-7, MW-8 and MW-9) were installed in June of 2004. Two additional monitor wells (MW-10 and MW-11) were installed in November of 2004. During installation of these five groundwater monitor wells, soil samples were collected and submitted to AnalySys, Inc., Austin, Texas, for analysis of total petroleum hydrocarbons (TPH) (gasoline and diesel range organics) and BTEX constituents. BTEX constituents for all soil samples from the monitor wells were below NMOCD remedial threshold limits. TPH concentrations from soil samples collected from groundwater monitor wells MW-7, MW-10 and MW-11 were at, or below, laboratory analytical method detection limits (MDLs);
- On February 1, 2007, Terracon assumed consulting duties in association with the release. Available files for this site were given to Terracon at this time; and
- Terracon has continued to provide quarterly gauging and groundwater monitoring activities at the site through the present.

1.3 Scope of Work

Terracon's scope of work included assuming oversight of remedial activities on February 1, 2007. Oversight activities included the preparation of the 2006 through 2016 Annual Groundwater Monitoring Reports for submittal to the NMOCD on the behalf of Plains. In accordance with the approved scope of work, Terracon conducted quarterly groundwater monitoring and sampling events on February 7 and 8, April 27, July 16, and November 10, 2017. The events were performed at the Livingston Line – Bob McCasland site located in Lea County, New Mexico.

The objective of the quarterly sampling events was to gauge and collect groundwater samples from the on-site groundwater monitor wells MW-1 through MW-11 for analysis of benzene, toluene, ethylbenzene, and total xylenes (BTEX) on a quarterly basis.

1.4 Standard of Care

Activities conducted prior to Terracon management of the project (beginning on February 1, 2007) were performed by previous consultants hired by Plains. As such, Terracon makes no assumptions or warranties regarding the previous consultants services being performed in a manner consistent with generally accepted practices of the profession undertaken in similar studies in the same geographical area during the same time period. Terracon makes no warranties, either express or implied, regarding the findings, conclusions or recommendations. Please note that Terracon does not warrant the work of laboratories, regulatory agencies or other third parties supplying information used in the preparation of the report.

1.5 Additional Scope Limitations

Findings, conclusions and recommendations resulting from these services are based upon information derived from the on-site activities and other services performed under this scope of work; such information is subject to change over time. Certain indicators of the presence of hazardous substances, petroleum products, or other constituents may have been latent, inaccessible, unobservable, non-detectable or not present during these services, and we cannot represent that the site contains no hazardous substances, toxic materials, petroleum products, or other latent conditions beyond those identified during this remediation activities. Subsurface conditions may vary from those encountered at specific borings or wells or during other surveys, tests, assessments, investigations or exploratory services; the data, interpretations, findings, and our recommendations are based solely upon data obtained at the time and within the scope of these services.

1.6 Reliance

This report has been prepared for the exclusive use of Plains Pipeline, L. P., and any authorization for use or reliance by any other party (except a governmental entity having jurisdiction over the site) is prohibited without the express written authorization of Plains Pipeline, L.P. and Terracon. Any unauthorized distribution or reuse is at the client's sole risk. Notwithstanding the foregoing, reliance by authorized parties will be subject to the terms, conditions and limitations stated in this report, and Terracon's Terms and Conditions. The limitation of liability defined in the terms and conditions is the aggregate limit of Terracon's liability to the client and all relying parties unless otherwise agreed in writing.

2.0 FIELD ACTIVITIES

2.1 Monitor Well Gauging

Monitoring wells were gauged to determine the depth to groundwater and to evaluate the presence of PSH. Based on the gauging data, no measurable thicknesses of PSH were present

in the on-site monitor wells during 2017.

Groundwater elevation gauging data collected during the respective quarterly sampling events were used to construct groundwater gradient maps that are included as Figures 3 through 6 (Appendix A). Groundwater flow direction was relatively consistent during 2017 in the southeasterly direction. Water level measurement data is summarized in Table 1 in Appendix B.

Groundwater elevations in 2017 decreased an average of approximately 0.99 feet in the on-site monitor wells. Monitor well MW-1 has remained dry (containing no fluids) since November 2007.

2.2 Groundwater Sampling

Quarterly monitoring and sampling events were performed on February 7 and 8, April 27, July 16, and November 10, 2017, by Terracon.

Groundwater samples were collected and analyzed from each of the groundwater monitor wells with the exception of monitoring wells exhibiting PSH or were dry in accordance with the NMOCD-approved groundwater sampling plan. Prior to sample collection, each of these monitor wells were micro-purged until consistent values (i.e., less than 10% variance between consecutive readings) were obtained for pH, temperature and conductivity. Following purging, a groundwater sample was collected directly from dedicated polyethylene tubing attached to the downhole pump.

Groundwater samples were placed in laboratory-supplied containers appropriate to the analyses requested and placed on ice in a cooler. The sample coolers and completed chain-of-custody forms were delivered to Xenco Laboratories Company in Odessa, Texas for analysis on a standard turnaround. The groundwater samples collected from the on-site monitor wells were analyzed for BTEX using EPA SW-846 Method 8021B in each of the four quarters of 2017.

Groundwater generated onsite during the sampling events was collected in the on-site recovery tank. Purged fluids from the sampling events and the five AFR events were transported and disposed of at an NMOCD-permitted facility by Globe Trucking of Eunice, NM.

3.0 LABORATORY ANALYTICAL METHODS

The groundwater samples collected from the site monitor wells were analyzed for BTEX using EPA SW-846 Method 8021B. Laboratory results from the analysis of groundwater samples collected from the monitor wells are summarized in Table 2 in Appendix B and presented as Figures 7 through 10 in Appendix A. The executed chain-of-custody forms and laboratory data sheets are provided in Appendix C.

4.0 DATA EVALUATION

4.1 Groundwater Samples

Terracon compared the reported groundwater concentrations to the New Mexico Water Quality Control Commission (NMWQCC) Groundwater Standards. Based on historical data, PAH sampling was not required for any of the onsite monitoring wells.

1st Quarter 2017

The 1st Quarter 2017 Groundwater Sampling Event was conducted on February 7 and 8, 2017. The first quarter analytical results are summarized below:

- Groundwater was not collected from monitor well MW-1, as the well was dry; and
- BTEX constituents were not detected at concentrations above applicable NMWQCC groundwater standards in the groundwater samples collected from any of the remaining onsite groundwater monitoring wells during the 1st Quarter 2017 Groundwater Sampling Event.

2nd Quarter 2017

The 2nd Quarter 2017 Groundwater Sampling Event was conducted on April 27, 2017. The second quarter results are summarized below:

- Groundwater was not collected from monitor well MW-1, as the well was dry; and
- BTEX constituents were not detected at concentrations above applicable NMWQCC groundwater standards in the groundwater samples collected from any of the remaining onsite groundwater monitoring wells during the 2nd Quarter 2017 Groundwater Sampling Event.

3rd Quarter 2017

The 3rd Quarter 2017 Groundwater Sampling Event was conducted on July 16, 2017. The third quarter results are summarized below:

- Groundwater was not collected from monitor well MW-1, as the well was dry; and
- BTEX constituents were not detected at concentrations above applicable NMWQCC groundwater standards in the groundwater samples collected from any of the remaining onsite groundwater monitoring wells during the 3rd Quarter 2017 Groundwater Sampling Event.

4th Quarter 2017

The 4th Quarter 2017 Groundwater Sampling Event was conducted on November 10, 2017. The fourth quarter results are summarized below:

- Groundwater was not collected from monitor well MW-1, as the well was dry; and
- BTEX constituents were not detected at concentrations above applicable NMWQCC groundwater standards in the groundwater samples collected from any of the remaining onsite groundwater monitoring wells during the 4th Quarter 2017 Groundwater Sampling Event.

4.2 Historical Data Comparisons

With a few exceptions, measurable PSH has not been present in the groundwater monitor wells MW-1, MW-2, MW-3, and MW-5 through MW-11 since the monitor wells were installed at the site. Monitor well MW-4 has historically exhibited measurable thicknesses of PSH ranging up to 3.48 ft. observed in 2004.

With a few exceptions, benzene has historically not been present in groundwater samples collected from monitor wells MW-3, MW-7 and MW-11. Benzene has been present in the groundwater samples collected from monitor wells MW-2, MW-4, MW-5, MW-8, and MW-9 at concentrations exceeding the applicable NMWQCC groundwater standard of 0.01 mg/L.

Toluene, ethylbenzene and total xylenes were not detected in the groundwater at concentrations exceeding their respective NMWQCC groundwater standards in any of the groundwater samples in 2017.

As of 2015, all on-site monitor wells, for two consecutive years, did not exceed PAH constituents above the NMWQCC standards where established.

The historic groundwater impacts observed across the site have decreased in frequency and magnitude.

5.0 SUMMARY

The findings of the 2017 Quarterly Groundwater Monitoring activities are as follows:

- Groundwater was not collected from monitor well MW-1 in 2017, as the well was dry;
- Measurable thicknesses of PSH were not observed in any of the monitoring wells; and
- There were no detected BTEX concentrations exceeding their respective NMWQCC Groundwater standards in 2017.

6.0 ANTICIPATED ACTIONS

Based upon the results of this report and approval from the NMOCD, Terracon recommends the following:

- Continue to observe monitor well MW-5 for the presence of benzene;
- Continue current quarterly groundwater sampling program for the presence of BTEX through 2018. If all monitor wells continue to remain below the NMWQCC Groundwater Standards, Plains and Terracon will evaluate possible closure; and
- Submit an annual report to the NMOCD detailing the 2018 site activities.

Plains Pipeline Livingston Line

Project Address:

Dale Moxley:

We are reporting to you the results of the analyses performed on the samples received under the project name referenced above and identified with the XENCO Report Number(s) 545980. All results being reported under this Report Number apply to the samples analyzed and properly identified with a Laboratory ID number. Subcontracted analyses are identified in this report with either the NELAC certification number of the subcontract lab in the analyst ID field, or the complete subcontracted report attached to this report.

Unless otherwise noted in a Case Narrative, all data reported in this Analytical Report are in compliance with NELAC standards. The uncertainty of measurement associated with the results of analysis reported is available upon request. Should insufficient sample be provided to the laboratory to meet the method and NELAC Matrix Duplicate and Matrix Spike requirements, then the data will be analyzed, evaluated and reported using all other available quality control measures.

The validity and integrity of this report will remain intact as long as it is accompanied by this letter and reproduced in full, unless written approval is granted by XENCO Laboratories. This report will be filed for at least 5 years in our archives after which time it will be destroyed without further notice, unless otherwise arranged with you. The samples received, and described as recorded in Report No. 545980 will be filed for 60 days, and after that time they will be properly disposed without further notice, unless otherwise arranged with you. We reserve the right to return to you any unused samples, extracts or solutions related to them if we consider so necessary (e.g., samples identified as hazardous waste, sample sizes exceeding analytical standard practices, controlled substances under regulated protocols, etc).

We thank you for selecting XENCO Laboratories to serve your analytical needs. If you have any questions concerning this report, please feel free to contact us at any time.

Respectfully,

Kelsey Brooks

Project Manager

Recipient of the Prestigious Small Business Administration Award of Excellence in 1994.

Certified and approved by numerous States and Agencies.

CASE NARRATIVE

Client Name: Terracon Midland
Project Name: Plains Pipeline Livingston Line

Project ID: A4177007
Work Order Number(s): 545980

Report Date: 15-FEB-17
Date Received: 02/08/2017

This laboratory is NELAC accredited under the Texas Laboratory Accreditation Program for all the methods, analytes, and matrices reported in this data package except as noted. The data have been reviewed and are technically compliant with the requirements of the methods used, except where noted by the laboratory.

Sample receipt non conformances and comments:

- X** In our quality control review of the data a QC deficiency was observed and flagged as noted. MS/MSD recoveries were found to be outside of the laboratory control limits due to possible matrix /chemical interference, or a concentration of target analyte high enough to affect the recovery of the spike concentration. This condition could also affect the relative percent difference in the MS/MSD.
- B** A target analyte or common laboratory contaminant was identified in the method blank. Its presence indicates possible field or laboratory contamination.
- D** The sample(s) were diluted due to targets detected over the highest point of the calibration curve, or due to matrix interference. Dilution factors are included in the final results. The result is from a diluted sample.
- E** The data exceeds the upper calibration limit; therefore, the concentration is reported as estimated.
- F** RPD exceeded lab control limits.
- J** The target analyte was positively identified below the quantitation limit and above the detection limit.
- U** Analyte was not detected.
- L** The LCS data for this analytical batch was reported below the laboratory control limits for this analyte. The department supervisor and QA Director reviewed data. The samples were either reanalyzed or flagged as estimated concentrations.
- H** The LCS data for this analytical batch was reported above the laboratory control limits. Supporting QC Data were reviewed by the Department Supervisor and QA Director. Data were determined to be valid for reporting.
- K** Sample analyzed outside of recommended hold time.
- JN** A combination of the "N" and the "J" qualifier. The analysis indicates that the analyte is "tentatively identified" and the associated numerical value may not be consistent with the amount actually present in the environmental sample.

** Surrogate recovered outside laboratory control limit.

BRL Below Reporting Limit.

RL Reporting Limit

MDL Method Detection Limit **SDL** Sample Detection Limit **LOD** Limit of Detection

PQL Practical Quantitation Limit **MQL** Method Quantitation Limit **LOQ** Limit of Quantitation

Livingston Line- Bob McCasland

Project Address:

Dale Moxley:

We are reporting to you the results of the analyses performed on the samples received under the project name referenced above and identified with the XENCO Report Number(s) 552027. All results being reported under this Report Number apply to the samples analyzed and properly identified with a Laboratory ID number. Subcontracted analyses are identified in this report with either the NELAC certification number of the subcontract lab in the analyst ID field, or the complete subcontracted report attached to this report.

Unless otherwise noted in a Case Narrative, all data reported in this Analytical Report are in compliance with NELAC standards. The uncertainty of measurement associated with the results of analysis reported is available upon request. Should insufficient sample be provided to the laboratory to meet the method and NELAC Matrix Duplicate and Matrix Spike requirements, then the data will be analyzed, evaluated and reported using all other available quality control measures.

The validity and integrity of this report will remain intact as long as it is accompanied by this letter and reproduced in full, unless written approval is granted by XENCO Laboratories. This report will be filed for at least 5 years in our archives after which time it will be destroyed without further notice, unless otherwise arranged with you. The samples received, and described as recorded in Report No. 552027 will be filed for 60 days, and after that time they will be properly disposed without further notice, unless otherwise arranged with you. We reserve the right to return to you any unused samples, extracts or solutions related to them if we consider so necessary (e.g., samples identified as hazardous waste, sample sizes exceeding analytical standard practices, controlled substances under regulated protocols, etc).

We thank you for selecting XENCO Laboratories to serve your analytical needs. If you have any questions concerning this report, please feel free to contact us at any time.

Respectfully,

Kelsey Brooks

CASE NARRATIVE

Client Name: Terracon Midland
Project Name: Livingston Line- Bob McCasland

Project ID: A4177007
Work Order Number(s): 552027

Report Date: 03-MAY-17
Date Received: 04/28/2017

This laboratory is NELAC accredited under the Texas Laboratory Accreditation Program for all the methods, analytes, and matrices reported in this data package except as noted. The data have been reviewed and are technically compliant with the requirements of the methods used, except where noted by the laboratory.

Sample receipt non conformances and comments:

Surrogate	% Recovery	Limits	Units	Analysis Date	Flag
1,4-Difluorobenzene	118	80 - 120	%		
4-Bromofluorobenzene	119	80 - 120	%		

- X** In our quality control review of the data a QC deficiency was observed and flagged as noted. MS/MSD recoveries were found to be outside of the laboratory control limits due to possible matrix /chemical interference, or a concentration of target analyte high enough to affect the recovery of the spike concentration. This condition could also affect the relative percent difference in the MS/MSD.
- B** A target analyte or common laboratory contaminant was identified in the method blank. Its presence indicates possible field or laboratory contamination.
- D** The sample(s) were diluted due to targets detected over the highest point of the calibration curve, or due to matrix interference. Dilution factors are included in the final results. The result is from a diluted sample.
- E** The data exceeds the upper calibration limit; therefore, the concentration is reported as estimated.
- F** RPD exceeded lab control limits.
- J** The target analyte was positively identified below the quantitation limit and above the detection limit.
- U** Analyte was not detected.
- L** The LCS data for this analytical batch was reported below the laboratory control limits for this analyte. The department supervisor and QA Director reviewed data. The samples were either reanalyzed or flagged as estimated concentrations.
- H** The LCS data for this analytical batch was reported above the laboratory control limits. Supporting QC Data were reviewed by the Department Supervisor and QA Director. Data were determined to be valid for reporting.
- K** Sample analyzed outside of recommended hold time.
- JN** A combination of the "N" and the "J" qualifier. The analysis indicates that the analyte is "tentatively identified" and the associated numerical value may not be consistent with the amount actually present in the environmental sample.

** Surrogate recovered outside laboratory control limit.

BRL Below Reporting Limit.

Livingston Line-Bob McCasland (SRS #2001-11226)

Project Address:

Kevin Axe:

We are reporting to you the results of the analyses performed on the samples received under the project name referenced above and identified with the XENCO Report Number(s) 557698. All results being reported under this Report Number apply to the samples analyzed and properly identified with a Laboratory ID number. Subcontracted analyses are identified in this report with either the NELAC certification number of the subcontract lab in the analyst ID field, or the complete subcontracted report attached to this report.

Unless otherwise noted in a Case Narrative, all data reported in this Analytical Report are in compliance with NELAC standards. The uncertainty of measurement associated with the results of analysis reported is available upon request. Should insufficient sample be provided to the laboratory to meet the method and NELAC Matrix Duplicate and Matrix Spike requirements, then the data will be analyzed, evaluated and reported using all other available quality control measures.

The validity and integrity of this report will remain intact as long as it is accompanied by this letter and reproduced in full, unless written approval is granted by XENCO Laboratories. This report will be filed for at least 5 years in our archives after which time it will be destroyed without further notice, unless otherwise arranged with you. The samples received, and described as recorded in Report No. 557698 will be filed for 60 days, and after that time they will be properly disposed without further notice, unless otherwise arranged with you. We reserve the right to return to you any unused samples, extracts or solutions related to them if we consider so necessary (e.g., samples identified as hazardous waste, sample sizes exceeding analytical standard practices, controlled substances under regulated protocols, etc).

We thank you for selecting XENCO Laboratories to serve your analytical needs. If you have any questions concerning this report, please feel free to contact us at any time.

Respectfully,

Kelsey Brooks

CASE NARRATIVE

Client Name: Terracon Midland

Project Name: Livingston Line-Bob McCasland (SRS #2001-11226)

Project ID: A4177007
Work Order Number(s): 557698

Report Date: 24-JUL-17
Date Received: 07/17/2017

This laboratory is NELAC accredited under the Texas Laboratory Accreditation Program for all the methods, analytes, and matrices reported in this data package except as noted. The data have been reviewed and are technically compliant with the requirements of the methods used, except where noted by the laboratory.

Sample receipt non conformances and comments:

- X** In our quality control review of the data a QC deficiency was observed and flagged as noted. MS/MSD recoveries were found to be outside of the laboratory control limits due to possible matrix /chemical interference, or a concentration of target analyte high enough to affect the recovery of the spike concentration. This condition could also affect the relative percent difference in the MS/MSD.
- B** A target analyte or common laboratory contaminant was identified in the method blank. Its presence indicates possible field or laboratory contamination.
- D** The sample(s) were diluted due to targets detected over the highest point of the calibration curve, or due to matrix interference. Dilution factors are included in the final results. The result is from a diluted sample.
- E** The data exceeds the upper calibration limit; therefore, the concentration is reported as estimated.
- F** RPD exceeded lab control limits.
- J** The target analyte was positively identified below the quantitation limit and above the detection limit.
- U** Analyte was not detected.
- L** The LCS data for this analytical batch was reported below the laboratory control limits for this analyte. The department supervisor and QA Director reviewed data. The samples were either reanalyzed or flagged as estimated concentrations.
- H** The LCS data for this analytical batch was reported above the laboratory control limits. Supporting QC Data were reviewed by the Department Supervisor and QA Director. Data were determined to be valid for reporting.
- K** Sample analyzed outside of recommended hold time.
- JN** A combination of the "N" and the "J" qualifier. The analysis indicates that the analyte is "tentatively identified" and the associated numerical value may not be consistent with the amount actually present in the environmental sample.

** Surrogate recovered outside laboratory control limit.

BRL Below Reporting Limit.

RL Reporting Limit

MDL Method Detection Limit **SDL** Sample Detection Limit **LOD** Limit of Detection

PQL Practical Quantitation Limit **MQL** Method Quantitation Limit **LOQ** Limit of Quantitation

DL Method Detection Limit

NC Non-Calculable

+ NELAC certification not offered for this compound.

* (Next to analyte name or method description) = Outside XENCO's scope of NELAC accreditation

Project Address:

Kris Williams:

We are reporting to you the results of the analyses performed on the samples received under the project name referenced above and identified with the XENCO Report Number(s) 568157. All results being reported under this Report Number apply to the samples analyzed and properly identified with a Laboratory ID number. Subcontracted analyses are identified in this report with either the NELAC certification number of the subcontract lab in the analyst ID field, or the complete subcontracted report attached to this report.

Unless otherwise noted in a Case Narrative, all data reported in this Analytical Report are in compliance with NELAC standards. The uncertainty of measurement associated with the results of analysis reported is available upon request. Should insufficient sample be provided to the laboratory to meet the method and NELAC Matrix Duplicate and Matrix Spike requirements, then the data will be analyzed, evaluated and reported using all other available quality control measures.

The validity and integrity of this report will remain intact as long as it is accompanied by this letter and reproduced in full, unless written approval is granted by XENCO Laboratories. This report will be filed for at least 5 years in our archives after which time it will be destroyed without further notice, unless otherwise arranged with you. The samples received, and described as recorded in Report No. 568157 will be filed for 45 days, and after that time they will be properly disposed without further notice, unless otherwise arranged with you. We reserve the right to return to you any unused samples, extracts or solutions related to them if we consider so necessary (e.g., samples identified as hazardous waste, sample sizes exceeding analytical standard practices, controlled substances under regulated protocols, etc).

We thank you for selecting XENCO Laboratories to serve your analytical needs. If you have any questions concerning this report, please feel free to contact us at any time.

Respectfully,

A handwritten signature in black ink, appearing to read "Mike Kimmel".

Flagging Criteria

- X** In our quality control review of the data a QC deficiency was observed and flagged as noted. MS/MSD recoveries were found to be outside of the laboratory control limits due to possible matrix /chemical interference, or a concentration of target analyte high enough to affect the recovery of the spike concentration. This condition could also affect the relative percent difference in the MS/MSD.
- B** A target analyte or common laboratory contaminant was identified in the method blank. Its presence indicates possible field or laboratory contamination.
- D** The sample(s) were diluted due to targets detected over the highest point of the calibration curve, or due to matrix interference. Dilution factors are included in the final results. The result is from a diluted sample.
- E** The data exceeds the upper calibration limit; therefore, the concentration is reported as estimated.
- F** RPD exceeded lab control limits.
- J** The target analyte was positively identified below the quantitation limit and above the detection limit.
- U** Analyte was not detected.
- L** The LCS data for this analytical batch was reported below the laboratory control limits for this analyte. The department supervisor and QA Director reviewed data. The samples were either reanalyzed or flagged as estimated concentrations.
- H** The LCS data for this analytical batch was reported above the laboratory control limits. Supporting QC Data were reviewed by the Department Supervisor and QA Director. Data were determined to be valid for reporting.
- K** Sample analyzed outside of recommended hold time.
- JN** A combination of the "N" and the "J" qualifier. The analysis indicates that the analyte is "tentatively identified" and the associated numerical value may not be consistent with the amount actually present in the environmental sample.

** Surrogate recovered outside laboratory control limit.

BRL Below Reporting Limit.

RL Reporting Limit

MDL Method Detection Limit **SDL** Sample Detection Limit **LOD** Limit of Detection

PQL Practical Quantitation Limit **MQL** Method Quantitation Limit **LOQ** Limit of Quantitation

DL Method Detection Limit

NC Non-Calculable

+ NELAC certification not offered for this compound.

* (Next to analyte name or method description) = Outside XENCO's scope of NELAC accreditation

Recipient of the Prestigious Small Business Administration Award of Excellence in 1994.

Certified and approved by numerous States and Agencies.

A Small Business and Minority Status Company that delivers SERVICE and QUALITY

Prelogin/Nonconformance Report- Sample Log-In

Client: Terracon Lubbock

Date/ Time Received: 11/10/2017 04:40:00 PM

Work Order #: 568157

Acceptable Temperature Range: 0 - 6 degC
Air and Metal samples Acceptable Range: Ambient
Temperature Measuring device used : IR3

Sample Receipt Checklist	Comments
#1 *Temperature of cooler(s)?	3.7
#2 *Shipping container in good condition?	Yes
#3 *Samples received on ice?	Yes
#4 *Custody Seals intact on shipping container/ cooler?	No
#5 Custody Seals intact on sample bottles?	N/A
#6* Custody Seals Signed and dated?	N/A
#7 *Chain of Custody present?	Yes
#8 Any missing/extra samples?	No
#9 Chain of Custody signed when relinquished/ received?	Yes
#10 Chain of Custody agrees with sample labels/matrix?	Yes
#11 Container label(s) legible and intact?	Yes
#12 Samples in proper container/ bottle?	Yes
#13 Samples properly preserved?	Yes
#14 Sample container(s) intact?	Yes
#15 Sufficient sample amount for indicated test(s)?	Yes
#16 All samples received within hold time?	Yes
#17 Subcontract of sample(s)?	No
#18 Water VOC samples have zero headspace?	Yes

* Must be completed for after-hours delivery of samples prior to placing in the refrigerator

Table 3
2017 Annual Groundwater Monitoring Report

GROUNDWATER ELEVATION AND PSH¹ DATA
Livingston Line - Bob McCasland Pipeline Leak
Lea County, New Mexico
Plains Pipeline, LP SRS Number 2001-11226
NMOCD File Number: 1R-0395
Terracon Project Number AR187006

All measurements are in feet above mean sea level

Monitor Well	Date Gauged	Relative Top of Casing Elevation (TOC)	Depth to PSH Below Top of Casing	Depth to Water Below Top of Casing	PSH Thickness	Corrected Relative Groundwater Elevation	PSH Recovered (gallons)	Volume Purged (gallons)

NWMQCC² Groundwater Standards		0.01	0.75	0.75	0.62

1. BTEX = Benzene, Toluene, Ethylbenzene, and Total Xylenes

2. NWMQCC = New Mexico Water Quality Control Commission

3. PSH = Phase Separated Hydrocarbons

Bold text indicates a concentration exceeding the NWMQCC Groundwater Standards

Table 4
2017 Annual Groundwater Monitoring Report

Groundwater Analytical Summary - BTEX¹
Livingston Line - Bob McCasland Pipeline Leak
Lea County, New Mexico
Plains Pipeline, LP SRS Number 2001-11226
NMOCD File Number: 1R-0395
Terracon Project Number AR187006

All concentrations are in milligrams per liter (mg/L)
