---

Good Afternoon,

I have just reviewed this plan and below are my questions:

- ❖ What is the reasoning that there are not any sample points located in the playa that is to the west of the tank battery, as it has been requested by SLO that the obvious spill path in this area be delineated?
- ❖ As the well is mentioned in this plan, will there be a separate delineation plan submitted for 1RP-4624 or is this delineation plan to suffice for both facilities?

Thank you,

**Amber Groves**

**Subject:** Pride Energy NM 83 State #001 Charactrization Plan (1RP-4625)

Ms. Yu:

On the behalf of Pride Energy, attached is the characterization plan for the above referenced location. We elected to characterize the 2017 release along with a historic release that occurred sometime between 1996 and 2003 per review of aerial photographs. The trench sample location showed evidence of the historic release at 12-feet below ground surface and is discussed further in the attached workplan.

I would like to conduct the field work mid-January. Please contact me at 970-570-9535 with any questions.

Andrew Parker
