All

NMOCD found a discrepancy regarding well names on the figures. The result are changes of the figures and the references in the text to said figures.

Sorry about that.

Subject: SWR Flying M Monitoring Well Plan

Dr. Oberding

We plan to drill the four monitoring wells discussed in our meeting of April 17. We have scheduled the driller for May 30 to June 1.

We are transmitting Water Easements to the SLO and Atkins Drilling is preparing well permits for the Office of the State Engineer.

As this is additional characterization that we have already discussed with OCD, please consider this communication a notification.

Thanks for your efforts and we look forward to working with you on this project.
