Dear Ms. Karrigan:

Please be advised that assessment to depth to groundwater must include USGS data. In general, NMOSE database is for depth to water table or aquifer, which is not necessarily equivalent to groundwater. Please also note that if the excavation area was laterally extended, please provide GPS coordinates of the impacted area as requested in the email dated May 1, 2018.

NMOCD will agree to closure of 1RP-4765, contingent upon photo documentation of the remediated area and submission of a final C-141 form. As this closure report was submitted before the revised 19.15.29 NMAC came into effect on August 14, 2018, the C-141 form (version 2017) may be used.

Thanks,

Olivia Yu Environmental Specialist NMOCD, District I <u>Olivia.yu@state.nm.us</u> 575-393-6161 x113

OCD approval does not relieve the operator of liability should their operations fail to adequately investigate and remediate contamination that may pose a threat to ground water, surface water, human health or the environment. In addition, OCD approval does not relieve the operator of responsibility for compliance with any other federal, state, local laws and/or regulations.

Subject: 1RP-4765 Closure

All,

Attached is the final closure for 1RP-4765 prepared by Souder Miller. Please let me know if you have any questions.

Thank you,

Callie
