If a Watercourse was Impacted, Describe Fully.\*  
Not applicable.

Describe Cause of Problem and Remedial Action Taken.\*

Operator reported that the oil dump on the heater treater failed closed, sending fluid down the flare line and out the flare. Approximately 8.50 gallons of oil was released out the flare in light mist and overspray.

Describe Area Affected and Cleanup Action Taken.\*

The overspray affected a 108 ft x 252 ft area, with the mist traveling west off location into a pasture. A surficial scrape (0-6 inches) was performed to recover lightly saturated soil. Confirmation samples were taken and outlined in the report prepared by Vertex.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to NMOCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the NMOCD marked as "Final Report" does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to ground water, surface water, human health or the environment. In addition, NMOCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.
