---

Ms. Wilson:

Why were all 4 initial response actions not completed? If not applicable, please indicate as such.

Please be advised that

1. The initial portion of the C-141 form does not include the calculations to determine the release volume. Visual estimation is not sufficient nor adequate. Please submit measurements in volume estimation; including dimensions, soil parameters (porosity, texture, bulk density, etc), and dated, geo-referenced photo documentation verifying that the release has been contained.
2. Per 19.15.29.13 NMAC, regulations of corresponding agencies supersede NMOCD's.

The 1RP for this incident is

<b>5199</b>	9/24/2018	A	Mesquite SWD	Mesquite 10" from Paduca Booster to Salado		26S-32E-9N	9/13/2018
-------------	-----------	---	--------------	--	--	------------	-----------

Please remember to include this 1RP identifier to all communications. Revised NMAC 19.15.29 was effective on August 14, 2018. Delineate and remediate per regulation. Mind the timelines for submittal of requisite information.

Please be advised that NMOCD recommends a completed site characterization/delineation report be reviewed or approved by NMOCD BEFORE any significant remediation work towards closure.

Thanks,

Olivia Yu  
Environmental Specialist  
NMOCD, District I

OCD approval does not relieve the operator of liability should their operations fail to adequately investigate and remediate contamination that may pose a threat to ground water, surface water, human health or the environment. In addition, OCD approval does not relieve the operator of responsibility for compliance with any other federal, state, local laws and/or regulations.

Hello, Ms. Melanie. Thanks for directing the release form to me for the Paduka. I need to be included on all email and correspondences to the OCD regarding this Paduka release. Also, I noticed a spill at the Mesquite Brann Station in Lea County, NM. I would need that form and information as well.

Regards,

Yolanda
