Attachments: 1RP5263_C-141 signed pgs 1 and 2; CE Lamunyon 1 CTB (10-17-18).pdf

Mr. Dittrich:

Notes

- The initial C-141 was not submitted within 15 days.
- NMOCD databases indicate the release occurred on Fee surface and Federal minerals ownership. BLM can verify.
- More information of the cause of release is required. Fatigue of what?

Please be advised that

1. The initial portion of the C-141 form does not include the calculations to determine the release volume. Visual estimation is not sufficient nor adequate. Please submit measurements in volume estimation; such as dimensions (L X W X depth of impact), soil parameters (porosity, texture, bulk density, soil moisture), meter readings, waste manifests, etc.
2. Dated, geo-referenced photo documentation for verification that the initial response activities have been employed to contain the release is requested.
3. Per 19.15.29.13 NMAC, regulations of corresponding agencies supersede NMOCD's.

The 1RP for this incident is

5263	11/7/2018	A	Oxy	CE Lamunyon CTB		23S-37E-28A	10/17/2018
------	-----------	---	-----	-----------------	--	-------------	------------

Please remember to include this 1RP identifier to all communications. Delineate and remediate per regulation. Mind the timelines for submittal of requisite information.

Please be advised that NMOCD recommends a completed site characterization/delineation report be reviewed or approved by NMOCD BEFORE any significant remediation work towards closure.

Thanks,

Olivia Yu
Environmental Specialist
NMOCD, District I

OCD approval does not relieve the operator of liability should their operations fail to adequately investigate and remediate contamination that may pose a threat to ground water, surface water, human health or the environment. In addition, OCD approval does not relieve the operator of responsibility for compliance with any other federal, state, local laws and/or regulations.
