Texland Petroleum operates the	CIBP was set above the Blinebry part injection wells offsetting this well a large polymer treatment in the inject	as part of the Hobbs C	o-op waterflood.	the hole.			
To determine the success of the polymer treatment it will be necessary for us to put the State A #4 back on-line for a period of time							

٢.

To determine the success of the polymer treatment it will be necessary for us to put the State A #4 back on-line for a period of time. July 2004 - It will be necessary for us to drill out the CIBP and install a test ESP in the well to pump the well efficiently. We intend to test the well for a 1 or 2 month period, at which time the EXP will be pulled or made permanent.
