Marathon Oil Company plans to cement squeeze the casing leak which was isolated in the McDonald State A/C 2 No. 29 on May 27, 2004.

Marathon proposes to cement squeeze the well with no tubing in the hole by loading the casing with water and then pumping cement through the tubing head. The top 8' of cement will be wash out of the casing with flush water in order to facilitate the drill out of the cement remaining in the well bore. After cement has set we will then drill out remaining cement past leak at 67' and run a pressure test on the casing. When the casing will hold pressure Marathon intends to drill out the two CTBP's in the well and downhole commingle production. Please see following C-103 for commingle request and details.
