13. Describe Proposed or Completed Operations (Clearly state all pertinent details, and give pertinent dates, including estimated date of starting any proposed work. If Well is directionally drilled, give subsurface locations and measured and true vertical depths for all markers and zones pertinent to this work.)

MSU #516 was TA'd in May of 1988 by setting a CIBP at 4625'. This well was recompleted several times, plugging off the P2 and P3 and lower P1. We would recommend opening the P2 and P3 and put back on production. Current very low oil prices prohibit any activity at this time, therefore we recommend the well remain in TA status. A 33 page engineering assessment by M. C. Watson, P.E. (NM Lic. #11031) was presented to the Roswell BLM office on October 22, 1997. The report details the potential of the Milnesand Unit. The field has tremendous potential of recovering more than the 7,000,000 BO recovered to date of the estimated 75,000,000 BO originally in place. It will not be economical to abandon and re-enter or re-drill wells in the unit, therefore abandonment would mean permanent loss of reserves and revenue to all concerned.
