13. Describe Proposed or Completed Operation (clearly state all pertinent details, including estimated starting date of any proposed work and approximate duration thereof. If the proposal is to deepen directionally or recompleat horizontally, give subsurface locations measured and true vertical depths of all pertinent markers and zones. Attach the Bond under which the work will be performed or provide the Bond No. on file with BLM/BIA. Required subsequent reports shall be filed within 30 days following completion of the involved operations. If the operation results in a multiple completion or recompleat in a new interval, a Form 3160-4 shall be filed once testing has been completed. Final Abandonment Notices shall be filed only after all requirements, including reclamation, have been completed, and the operator has determined that the site is ready for final inspection.)

Pure Resources, L. P. realizes this well has had its Temporary Abandoned status extended in the past. However, this is a wellbore within an established, mature Waterflood Unit, and Pure requests continued extension of the TA status of this wellbore due to its "potential" as a pattern development well, either in current secondary or in future tertiary operations.

This Waterflood Unit (the West Lovington Unit) is still undergoing evaluation for either CO2 injection and/or other tertiary recovery methods to enhance the present secondary recovery operations, which are in late economic life. If this study shows these enhanced recovery methods as not being viable for this Unit, then this Unit may become a sale candidate subsequent to further extensive economic evaluation. In either case, keeping this well in its current Temporary Abandoned status, imparts more "potential" value to the Unit versus as a Plugged & Abandoned wellbore.

This well also does not currently pose a health or environmental risk. If, at any future date, this well does become a risk to the environment, Pure Resources will immediately plug the well.
