Describe Cause of Problem and Remedial Action Taken.*

The water leg on the gun barrel froze when processing fresh water from the hydrotesting of the newly installed SWD line. This caused the skim tank to overflow into sealed containment. Additional freshwater was intentionally released into the sealed containment in the process of unfreezing the line. Insulation was added to the water leg to prevent future freezing occurrences.

Describe Area Affected and Cleanup Action Taken.*

Entire release was within sealed containment barrier, no release outside containment occurred. Pulled all free fluid with vacuum truck and put in SWD.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to NMOCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the NMOCD marked as "Final Report" does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to ground water, surface water, human health or the environment. In addition, NMOCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.
