# 30-025-40280

#### **SURFACE USE PLAN OF OPERATIONS**

Operator Name/Number: Occidental Permian LP

157984

Lease Name/Number:

Fecta 33 Federal #2H

Federal Lease No. NMNM01135

Pool Name/Number:

Lusk Bone Spring, South

41460

**Surface Location:** 

141 FNL 2347 FWL NENW(C) Sec 33 T19S R32E

**Bottom Hole Location:** 330 FSL 1980 FWL SESW(N) Sec 33 T19S R32E

HÖBBS OCD

# 1. Existing Roads

SEP 0 6 2011

a. A copy of a USGS "Williams Sink, NM" quadrangle map is attached showing the proposed location. The well location is spotted on this map, which shows the existing road system.

RECEIVED

- b. The well was staked by Terry J. Asel, Certificate No. 15079 on 4/18/11, certified 4/27/11.
- c. Directions to Location: At the intersection of USH 62/180 and SH 243, go west on SH 243 for 4.5 miles. Turn right and go north on CR 126 for 3.9 miles. Turn right and go east on caliche road for 1.1 miles, continue southeast for 0.2 miles. Turn left on proposed road and go north for 0.1 miles turn right and go east 0.3 miles to location.

#### 2. New or Reconstructed Access Roads:

- a. A new access road will be built. The access road will run approximately 0.3 miles east-northeast from an existing road to the location. See Exhibit #2.
- b. The maximum width of the road will be 15'. It will be crowned and made up of 6" of rolled and compacted caliche. Water will be deflected, as necessary, to avoid accumulation and prevent surface erosion.
- c. Surface material will be native caliche. This material will be obtained from a BLM approved pit nearest in proximity to the location. The average grade will be approximately 1%.
- d. No cattle guards, grates or fence cuts will be required. No turnouts are planned.
- e. Blade, water & repair approximately 6985' of an existing caliche road.

# 3. Location of Existing Wells:

Existing wells within a one mile radius of the proposed well are shown on Exhibit #3.

# 4. Location of Existing and/or Proposed Production Facilities.

- a. In the event the well is found productive, the Fecta 33 Federal tank battery would be utilized and the necessary production equipment will be installed at the well site. See proposed Production Facilities Layout diagram, Exhibit #4.
- b. If necessary, electric power poles will be set along side of the access road.
- c. All flowlines will adhere to API Standards, see Exhibit #4.

# 5. Location and types of Water Supply.

This well will be drilled using a combination of water mud systems. It will be obtained from commercial water stations in the area and will be hauled to location by transport truck using existing and proposed roads.

Surface Use Plan 1

SEP 0 8 2011

#### 6. Construction Materials:

All caliche utilized for the drilling pad and proposed access road will be obtained from an existing BLM approved pit or from prevailing deposits found under the location. Will use BLM recommended use of extra caliche from other locations close by for roads, if available.

### 7. Methods of Handling Waste Material:

- a. A closed loop system will be utilized consisting of above ground steel tanks and haul-off bins. Disposal of liquids, drilling fluids and cuttings will be disposed of at an approved facility, see C-144 CLEZ.
  - 1. Solids CRI
  - 2. Liquids Laguna
- b. All trash, junk, and other waste material will be contained in trash cages or bins to prevent scattering. When the job is completed, all contents will be removed and disposed of in an approved sanitary landfill.
- c. The supplier, including broken sacks, will pick up slats remaining after completion of well.
- d. A Porto-john will be provided for the rig crews. This equipment will be properly maintained during the drilling and completion operations and will be removed when all operations are complete.
- e. Disposal of fluids to be transported will be by the following companies: TFH Ltd. Laguna SWD Facility
- 8. Ancillary Facilities: None needed

#### 9. Well Site Layout

Exhibit #5 shows the proposed well site layout with dimensions of the pad layout and equipment location.

V-Door	East	Tanks	North	Pad	280' X 380'
--------	------	-------	-------	-----	-------------

#### 10. Plans for Surface Reclamation:

- a. After concluding the drilling and/or completion operations, if the well is found non-commercial, the caliche will be removed from the pad and transported to the original caliche pit or used for other drilling locations. The road will be reclaimed as directed by the BLM. The original top soil will again be returned to the pad and contoured, as close as possible, to the original topography.
- b. If the well is deemed commercially productive, caliche from areas of the pad site not required for operations will be reclaimed. The original top soil will be returned to the area of the drill pad not necessary to operate the well. These unused areas of the drill pad will be contoured, as close as possible, to match the original topography, and the area will be seeded with an approved BLM mixture to re-establish vegetation.

### 11. Surface Ownership

The surface is owned by the U.S. Government and is administered by the BLM. The surface is multiple use with the primary uses of the region for the grazing of livestock and the production of oil and gas. The surface is leased to:Roy Creamer, P.O. Box 2414, Carlsbad, NM 88220.

They will be notified of our intention to drill prior to any activity.

#### 12. Other Information

- a. The vegetation cover is generally sparse consisting of mesquite, yucca, shinnery oak, sandsage and perennial. native range grass. The topsoil is sandy in nature. Wildlife in the area is also sparse consisting of deer, coyotes, rabbits, rodents, reptiles, dove and quail.
- b. There is no permanent or live water in the general proximity of the location.
- c. There are no dwellings within 2 miles of the proposed well site.

d. Cultural Resources Examination - this well is located in the Permian Basin MOA	he Permian Basin N	in the I	located in	well is	- this	Examination	l Resources	Cultural	d.
