9/1/11: The Hulda A. Townsend #6 SWD failed a routine NMOCD MIT test, because of a suspected tubing and/or packer leak.  
9/12-9/19: NGP rigged up and pulled the tbq and packer. Tbg was scanalog inspected to determine quality.  
All tbq was replaced and packer was re-dressed to spec. Packer was set twice, first at 9547' and then at 9533', csg did not pass integrity test at either setting. Packer was unseated and left hanging at 9547', well was shut in and pulling unit was moved out.
