Surface Use Plan
Hallertau 5 Federal No. 3H
Cimarex Energy Co. of Colorado
Unit N, Section 5
T26S-R32E; Lea County, NM

FEB 2 3 2012

RECEIVED

- 1. Existing Roads: Area maps, Exhibit "A" shows the proposed well site as staked. Exhibit "B" is a reproduction of Eddy Co. General Highway Map. Exhibit "C" is a reproduction of a USGS Topographic Map, and Exhibit "C-1" is a well site layout map, showing proposed road to location and existing road. Existing road shown on Exhibits "C" and C"-1" will be maintained in a condition equal to or better than current conditions.
  - A. The maximum width of the driving surface will be 15.' The road will be crowned and ditched with a 2% slope from the tip of the crown to the edge of the driving surface. The ditches will be 1' deep with 3:1 slopes. The driving surface will be made of 6" rolled and compacted caliche.
  - B. From the junction of Orla and Ross, go West on Ross for 1.5 miles to proposed lease road.
- 2. Planned Access Roads: 178' of new, on-lease access road is proposed.

#### 3. Planned Pipelines and Electric Lines:

An on-lease, 3 phase, 4 wire, 480 volt powerline with 14, 300' span, 40' poles built to BLM Raptor specs. E-line will follow approximately 4290' of proposed access road and existing Ross Road for all Hallertau wells to the Hallertau 5 Fed 4 battery located in M, 5, 26S, 32E.

#### 4. Location of Existing Wells in a One-Mile Radius - Exhibit A

A. Water wells -

None known

B. Disposal wells -

None known

C. Drilling wells -

None known

D. Producing wells -

As shown on Exhibits "A"

E. Abandoned wells -

As shown on Exhibits "A"

#### 5. Location of Proposed Production Facilities:

If on completion this well is a producer, approximately 1320' of 4" SDR-11 poly pipe will be laid along proposed new lease road and existing Ross Road from the Hallertau 5 Fed 3 to the Hallertau 5 Fed 4 tank battery to carry oil, gas, and water to the #4 tank battery. Allocations will be based on well tests. See production facilities layout diagram. Any changes to the facilities or off-site facilities will be accompanied by a sundry notice.

#### 6. Location and Type of Water Supply:

Water will be purchased locally from a commercial source and trucked over the access roads.

#### 7. Source of Construction Material:

If possible, native caliche will be obtained from the excavation of drill site. Topsoil will be pushed back from the drill site and existing caliche will be ripped and compacted. Then topsoil will be stockpiled on location as depicted on Exhibit "D" (rig layout). If additional material is needed, it will be purchased from a BLM-approved pit as near as possible to the well

V . F . 3

# Surface Use Plan Hallertau 5 Federal No. 3H Cimarex Energy Co. of Colorado Unit N, Section 5

T26S-R32E; Lea County, NM

#### 8. Ancillary Facilities:

A. No camps or airstrips to be constructed.

#### 9. Well Site Layout:

- A. Exhibit "D" shows location and rig layout.
- C. Mud pits in the closed circulating system will be steel pits and the cuttings will be stored in steel containment pits.
- D. Cuttings will be stored in steel pits until they are hauled to a state-approved disposal facility.
- E. If the well is a producer, those areas of the location not essential to production facilities will be reclaimed and seeded per BLM requirements.

#### 10. Plans for Restoration of Surface:

Rehabilitation of the location will start in a timely manner after all drilling operations cease. The type of reclamation will depend on whether the well is a producer or a dry hole.

Drainage systems, if any, will be reshaped to the original configuration with provisions made to alleviate erosion. These may need to be modified in certain circumstances to prevent inundation of the location's pad and surface facilities. After the area has been shaped and contoured, topsoil from the spoil pile will be placed over the disturbed area to the extent possible. Revegetation procedures will comply with BLM standards.

If the well is a dry hole, the pad and road area will be recountoured to match the existing terrain. Topsoil will be spread to the extent possible. Revegetation will comply with BLM standards.

Should the well be a producer, those areas of the location not essential toproduction facilities and operations will be reclaimed and seeded per BLM requirements. Please see Production Facilities Layout Diagram, exhibit D-1.

### 11 Other Information

- A. Topography consists of a sloping plane with loose tan sands. Vegetation is mainly yucca, mesquite and shin oak.
- B. The wellsite is on surface owned by Department of the Interior, Bureau of Land Management. The land is used mainly for farming, cattle ranching, recreational use, and oil and gas production.
- C. In lieu of an archaeological survey report, Cimarex will be submitting an MOA application for this well pad and access road since they are within the MOA boundary.
- D. There are no know dwellings within 1½ miles of this location.
