## Drilling Plan ConocoPhillips Company <u>Maljamar; Yeso, west</u>

## Emerald Federal #5

Lea County, New Mexico

1. Estimated tops of geological markers and estimated depths to water, oil, or gas formations:

The ranges of depths for the formation tops, thicknesses, and planned Total Depths for all the wells to be drilled under this Master Drilling Plan are presented in the table below.

The datum for these depths is RKB (which is 14' above Ground Level).

Formations	Top Depths FT MD	Contents
Quaternary	Surface	Fresh Water
Rustler	790	Anhydrite
Salado (top of salt)	972	Salt
Tansill	2002	Gas, Oil and Water
Yates	2158	Gas, Oil and Water
Seven Rivers	2483	Gas, Oil and Water
Queen	3109	Gas, Oil and Water
Grayburg	3520	Gas, Oil and Water
San Andres	3908	Gas, Oil and Water
Glorieta	5366	Gas, Oil and Water
Paddock	5477	Gas, Oil and Water
Blinebry	5789	Gas, Oil and Water
Tubb	6830	Gas, Oil and Water
Drinkard	7072	Gas, Oil and Water
Deepest estimated perforation	7072	Deepest estimated perf. is ~ 0' – 10' above Top of Drinkard
Total Depth (maximum)	7272	200' below deepest estimated perforation

All of the water bearing formations identified above will be protected by setting of the <u>8-5/8</u> surface casing <u>25' – 70' into the Rustler formation</u> and circulating of cement from casing shoe to surface in accordance with the provisions of Onshore Oil and Gas Order No. 2 and New Mexico Oil Conservation Division Title 19.

The targeted oil and gas bearing formations identified above will be protected by setting of the <u>5-1/2</u>" production casing <u>10' off bottom of TD</u> and circulating of cement from casing shoe to surface in accordance with the provisions of Onshore Oil and Gas Order No. 2 and New Mexico Oil Conservation Division Title 19.

#### Proposed casing program: 2.

1 1	Hole Size		Interval ID RKB (ft)	OD	Wt			MIY	MIY Col		Calc	Safety Factors Calculated per BLM Criteria	
Туре	(in)	From	То	(inches)	(lb/ft)	Gr	Conn	(psi)	(psi)	(klbs)	Burst DF	Collapse DF	Jt Str DF (Tension) Dry/Buoyant
Cond	20	0	40' – 85' (30' – 75' BGL)	16	0.5" wali	В	Line Pipe	N/A	N/A	N/A	NA	NA	NA
Alt. Cond	20	0	40' – 85' (30' – 75' BGL)	13-3/8	48#	H-40	PE	1730	740	N/A	NA	NA	NA
Surf	12-1/4	0	815'-860'	8-5/8	24#	J-55	STC	2950	1370	244	7.76	3.60	11.8 / 13.6
Prod	7-7/8	0	7217'-7262'	5-1/2	17#	L-80	LTC	7740	6290	338	2.05	1.67	2.74 / 3.23

The casing will be suitable for H<sub>2</sub>S Service.

The surface and production casing will be set approximately 10' off bottom and we will drill the hole with a 45' range uncertainty for casing set depth to fit the casing string so that the cementing head is positioned at the floor for the cement job.

The production casing will be set 155' to 200' below the deepest estimated perforation to provide rathole for the pumping completion and for the logs to get deep enough to log the interval of interest.

#### Joint Strength Design (Safety) Factors - BLM Criteria

Joint Strength Design (Safety) Factor: SFt SFt = Fi / Wt;

Where

Fi is the rated pipe Joint Strength in pounds (lbs)

Wt is the weight of the casing string in pounds (lbs)

The Minimum Acceptable Joint Strength Design (Safety) Factor SFT = 1.6 dry or 1.8 buoyant

Surface Casino:

SFj Dry = 244,000 lbs / (860 ft x 24 lb/ft) = 244,000 lbs / 20,640 lbs = 1118 Drv

SFj Bouyant = 244,000 lbs / [(860 ft x 24 lb/ft) (1 - 8.5/65.5)] = 244,000 lbs / [20,640 lbs x 0.870] = 136 Buoyant Production Casing:

SFi Dry = 338,000 lbs / (7262 ft x 17 lb/ft) = 338,000 lbs / 123,454 lbs = 2474 Dry SFj Bouyant = 338,000 lbs / [(7262 ft x 17 lb/ft) (1 - 10.0/65.5)] = 338,000 lbs / [123:454 lbs x 0.847] = 323 Buoyant

#### Collapse Design (Safety) Factors – BLM Criteria

Collapse Design (Safety) Factor: SFc  $SFc = Pc / (MW \times .052 \times Ls)$ Where

Pc is the rated pipe Collapse Pressure in pounds per square inch (psi)

MW is mud weight in pounds per gallon (ppg)

Ls is the length of the string in feet (ft)

The Minimum Acceptable Collapse Design (Safety) Factor SFc = 1.125

Surface Casing:

SFc = 1370 psi / (8.5 ppg x .052 x 860 ft) = 1370 psi / 380 psi = 3.60 Production Casing: SFc = 6290 psi / (10 ppg x .052 x 7262 ft) = 6290 psi / 3776 psi = 167

#### Burst Design (Safety) Factors - BLM Criteria

Burst Design (Safety) Factor: SFb SFb = Pi / BHP Where

- Pi is the rated pipe Burst (Minimum Internal Yield) Pressure in pounds per square inch (psi)
- BHP is bottom hole pressure in pounds per square inch (psi)

The Minimum Acceptable Burst Design (Safety) Factor SFb = 1.0

Surface Casing:

SFb = 2950 psi / (8.5 ppg x .052 x 860 ft) = 2950 psi / 380 psi = 7/76 Production Casing:

SFb = 7740 psi / (10 ppg x .052 x  $\overline{7262}$  ft) = 7740 psi /  $\overline{3776}$  psi =  $\overline{205}$ 

Field-wide Drilling Plan - Maljamar; Yeso, west (Date: January 9, 2012)

#### 3. Proposed cementing program:

#### 16" or 13-3/8" Conductor:

Cement to surface with rathole mix, ready mix or Class C Neat cement. (Note: The gravel used in the cement is not to exceed 3/8" diameter) TOC at surface.

#### 8-5/8" Surface Casing & Cementing Program: 8-5/8" 24# J-55 STC

The intention for the cementing program for the Surface Casing is to:

- Place the Tail Slurry from the casing shoe to 300' above the casing shoe,
- Bring the Lead Slurry to surface.

Spacer: 20 bbls Fresh Water

	Slurry	Inter Ft N		Weight ppg	Sx	Vol Cuft	Additives	Yield ft <sup>3</sup> /sx
Lead	Class C	Surface	515' – 560'	13.6	350	595	4%Bentonite 2%CaCl2 .125%Polyflake 0.2% antifoam Excess =230% based on gauge hole volume	1.70
Tail	Class C	515' – 560'	815' – 860'	14.8	200	268	1% CaCl2 Excess = 100% based on gauge hole volume	1.34

Displacement: Fresh Water.

Note: In accordance with the Pecos District Conditions of Approval, we will Wait on Cement (WOC) for a period of not less than 18 hrs after placement or until at least 500 psi compressive strength has been reached in both the Lead Slurry and Tail Slurry cements on the Surface Casing, whichever is greater.

#### 5-1/2" Production Casing & Cementing Program: 5-1/2" 17# L-80 LTC

The intention for the cementing program for the Production Casing is to:

- Place the Tail Slurry from the casing shoe to a point approximately 200' above the top of the Paddock,
- Bring the Lead Slurry to surface.

Spacer: 20 bbls Fresh Water

	Slurry		rvals MD	Weight ppg	Sx	Vol Cuft	Additives	Yield ft <sup>3</sup> /sx
Lead	50:50 Poz/C	Surface	5200'	11.8	1000	2640	10% Bentonite 8 lbs/sx Salt 0.4% Fluid loss additive 0.125% LCM if needed Excess = 220% or more if needed based on gauge hole volume	2.64
Tail	Class H	5200'	7217'-7262'	16.4	650	. 696	<ul> <li>0.2% Fluid loss additive</li> <li>0.3% Dispersant</li> <li>0.15% Retarder</li> <li>0.2% Antifoam</li> <li>Excess = 100% or more if needed based on gauge hole volume</li> </ul>	1.07

Displacement: Fresh Water with approximately 250 ppm gluteraldehyde biocide. Field-wide Drilling Plan – Maljamar; Yeso, west (Date: January 9, 2012)

#### Proposal for Option to Adjust Production Casing Cement Volumes:

The production casing cement volume presented above are estimates based on gauge 7-7/8" hole. We will adjust these volumes based on the caliper log data for each well and our trends for amount of cement returns to surface. Also, if no caliper log is available for any particular well, we would propose an option to possibly increase the production casing cement volume to account for any uncertainty in regard to the hole volume.

#### 4. Pressure Control Equipment:

A <u>11" 3M</u> system will be installed, used, maintained, and tested accordingly as described in Onshore Oil and Gas Order No. 2.

Our BOP equipment will be:

- Rotating Head
- o Annular BOP, 11" 3M
- o Blind Ram, 11" 3M
- o Pipe Ram, 11" 3M

After nippling up, and every 30 days thereafter or whenever any seal subject to test pressure is broken followed by related repairs, blowout preventors will be pressure tested. BOP will be inspected and operated at least daily to insure good working order. All pressure and operating tests will be done by an independent service company and recorded on the daily drilling reports. BOP will be tested using a test plug to isolate BOP stack from casing. BOP test will include a low pressure test from 250 to 300 psi for a minimum of 10 minutes or until requirements of test are met, whichever is longer. Ram type preventers and associated equipment will be tested to the approved stack working pressure of 3000 psi isolated by test plug. Annular type preventers will be tested to 50 percent of rated working pressure, and therefore will be tested to 1500 psi. Pressure will be held for at least 10 minutes or until provisions of test are met, whichever is longer. Valve on casing head below test plug will be open during testing of BOP stack. BOP will comply with all provisions of Onshore Oil and Gas Order No. 2 as specified. **See Attached BOPE Schematic.** 

#### 5. Proposed Mud System

The mud systems that are proposed for use are as follows:

DEPTH	TYPE	Density ppg	FV sec/qt	API Fluid Loss cc/30 min	рН	Vol bbl
0 – Surface Casing Point	Fresh Water or Fresh Water Native Mud	8.5 - 9.0	28 – 40	N.C.	N.C.	120 160
Surface Casing Point to TD	Brine (Saturated NaCl <sub>2</sub> )	10	29	N.C.	10 – 11	400 - 750
Conversion to Mud at TD	Brine Based Mud (NaCl <sub>2</sub> )	10	34 – 45	5 – 10	10 – 11	0 - 750

Drilling mud containing H2S shall be degassed in accordance with API RP-49, item 5.14. The gases shall be piped into the flare system. Gas detection equipment and pit level flow monitoring equipment will be on location. ConocoPhillips Company will maintain sufficient mud and weighting material on location at all times.

#### Proposal for Option to Not Mud Up at TD:

FW, Brine, and Mud volume presented above are estimates based on gauge 12-1/4" or 7-7/8" holes. We will adjust these volume based on hole conditions. Also, we propose an option to not mud up leaving only brine in the hole.

#### Field-wide Drilling Plan - Maljamar; Yeso, west (Date: January 9, 2012)

# Logging, Coring, and Testing Program: See CoA

- a. No drill stem tests will be done
- b. No mud logging is planned
- c. No whole cores are planned
- d. The open hole electrical logging program is planned to be as follows:
  - Total Depth to 2500': Resistivity, Density, and Gamma Ray
  - Total Depth to surface Casing Shoe: Caliper
  - Total Depth to surface, Gamma Ray and Neutron
  - Formation pressure data (XPT) on electric line if needed (optional)
  - Rotary Sidewall Cores on electric line if needed (optional)
  - BHC or Dipole Sonic if needed (optional)
  - Spectral Gamma Ray if needed (optional)

#### 6. Abnormal Pressures and Temperatures:

- No abnormal pressures are expected to be encountered.
- Loss of circulation is a possibility in the horizons below the Top of Grayburg. We expect that normal Loss of Circulation Material will be successful in healing any such loss of circulation events.
  - The bottom hole pressure is expected to be 8.55 ppg gradient. 0
  - The expected Bottom Hole Temperature is 115 degrees F. 0
- The estimated H<sub>2</sub>S concentrations and ROE calculations for the gas in the zones to be penetrated are presented in the table below for the various producing horizons in this area:

FORMATION / ZONE	H2S (PPM)	Gas Rate (MCFD)	ROE 100 PPM	ROE 500 PPM
Grayburg / San Andres (from MCA)	14000	38	59	27
Yeso Group	400	433	34	_15

ConocoPhillips will comply with the provisions of Oil and Gas Order #6

### . 7. Anticipated starting date and duration of operations:

Well pad and road constructions will begin as soon as all agency approvals are obtained. Anticipated date to drill these wells begin from early 2012 through the end after receiving approval of the APD.

## **Contact Information:**

Program prepared by: James Chen Drilling Engineer, ConocoPhillips Company Phone (832) 486-2184 Cell (832) 768-1647 Date: January 1, 2012

- Item Description
  - 1 Rotating Head (11")
  - 2A Fill up Line and Valve
  - 2B Flow Line (8")
  - 2C Shale Shakers and Solids Settling Tank
  - 2D Cuttings Bins for Zero Discharge
  - 2E Rental Mud Gas Separator with vent line to flare and return line to mud system
  - 3 Annular BOP (11", 3000 psi)
  - 4 Double Ram BOP (11", 3000 psi, with Blind Rams in Upper Set and Pipe Rams in Lower Set)
  - 5 Kill Line (2" Flexible Hose, 3000 psi WP)
  - 6 Kill Line Valve, Inner (2-1/6" 3000 psi WP)
  - 7 Kill Line Valve, Outer (2-1/16", 3000 psi WP)
  - 8 Kill Line Check Valve (2-1/16", 3000 psi WP
  - 9 Choke Line (3" Steel Line, 3000 psi WP)
  - 10 Choke Line Valve, Inner (3-1/8", 3000 psi WP)
  - 11 Choke Line Valve, Outer, (Hydraulically operated, 3-1/8", 3000 psi WP
  - 12 Spacer Spool (11" 3M x 3M)
  - 13 Spacer Spool (11 3M x 5M)
  - 14 Casing Head (11" 5M)
  - 15 Ball Valve and Threaded Nipple on Casing Head Outlet, 2" 5M
  - 16 Surface Casing

Drawn by: Steven O. Moore, Chief Drilling Engineer, Mid-Continent Business Unit, ConocoPhillips Company, 07-Feb-2012

All Tees must be targeted

- Item Description
  - 1 Manual Adjustable Choke, 2-1/16", 3M
  - 2 Manual Adjustable Choke, 2-1/16", 3M
  - 3 Gate Valve, 2-1/16" 5M
  - 4 Gate Valve, 2-1/16" 5M
  - 5 Gate Valve, 2-1/16" 5M
  - 6 Gate Valve, 2-1/16" 5M
  - 7 Gate Valve, 3-1/8" 3M
  - 8 Gate Valve, 2-1/16" 5M
  - 9 Gate Valve, 2-1/16" 5M
  - 10 Gate Valve, 2-1/16" 5M
  - 11 Gate Valve, 3-1/8" 3M
  - 12 Gate Valve, 2-1/16" 5M
  - 13 Pressure Gauge
  - 14 2" hammer union tie-in point for BOP Tester

We will test each valve to 3000 psi from the upstream side.
