General Remarks:

6/1/13 ES:SA Inspection to monitor for FAN. The north side of the location (pill area) looks good, vegetation has been successful. The portion around the D1-M and south has not done well. The rancher has used this area to feed livestock. There is a liquid feeding tub to the NW of the D1-M and you can see where hay was deposited and consumed just south of the D1-M. Livestock used this area for bedding. With this going on we can not achieve BLM objectives. This is private lands and the operator will not be requested to change habitat. Release the location from liability.
