PREVAILING WIND  
 DIRECTION IN SENM

PRIMARY BRIEFING  
 AREA W/ SCBA

**Escape:**

In the event of an emergency, crews shall escape upwind of any H<sub>2</sub>S gas that is released. Escape routes can be facilitated from the location entrance road, then due west on lease road. Depending on wind direction, the Stratocaster 20-1H or the radio tower will be the mustard point. Crews should then block entrance to location from the lease road so as not to allow anyone traversing into a hazardous area. This blockade should be at a safe distance outside of the ROE. ***There are no homes or buildings in or near the ROE.***

**Assumed 100ppm ROE=3000'**

**100ppm H<sub>2</sub>S concentration shall trigger activation of this plan.**

**Emergency Procedures:**

In the event of a release of gas containing H<sub>2</sub>S, the first responder(s) must

- Isolate the area and prevent entry by other persons into the 100 ppm ROE
- Evacuate any public places encompassed by the 100 ppm ROE
- Be equipped with H<sub>2</sub>S monitors and air packs in order to control the release
- Use the "buddy system" to ensure no injuries occur during the response
- Take precautions to avoid personal injury during this operation
- Contact operator and/or local officials to aid in operation. \*\*See list of phone numbers attached.\*\*
- Have received training in the 1) detection of H<sub>2</sub>S, 2) measures for protection against the gas 3) equipment used for protection & emergency response.

### Ignition of Gas Source

SO<sub>2</sub> or Sulfur Dioxide must be taken in precaution should the need to ignite the H<sub>2</sub>S gas stream if well control is lost against this gas. Intentional ignition must be coordinated with the NMOCD and local officials. Additionally, the NM State Police may become involved. NM State Police shall be the Incident Command on scene of any major release. Wind direction identification whenever there is ignition of H<sub>2</sub>S must be taken into consideration as well.

Characteristics of H<sub>2</sub>S and SO<sub>2</sub>

Common Name	Chemical Formula	Specific Gravity	Threshold Limit	Hazardous Limit	Lethal Concentration
Hydrogen Sulfide	H <sub>2</sub> S	1.189 Air = 1	10 ppm	100 ppm/hr	600 ppm
Sulfur Dioxide	SO <sub>2</sub>	2.21 Air = 1	2 ppm	N/A	1000 ppm

### Contacting Authorities

Endurance Resources personnel must liaison with local & state agencies to ensure a proper response to a major release. Additionally, the NMOCD must be notified of the release as soon as possible but no later than 4hrs. Agencies will ask for information such as type & volume of release, wind direction, location of release, ect. Be prepared with all information available. The following call list of essential & potential responders has been prepared for use during a release. Endurance Resources' company response must be in coordination with the HMER.

## **HYDROGEN SULFIDE DRILLING OPERATIONS PLAN**

RECEIVED

### **I. Hydrogen Sulfide Training**

All personnel, whether regularly assigned, contracted, or employed on an unscheduled basis, will receive training from a qualified instructor in the following area prior to commencing drilling operations on this well:

1. The hazards & characteristics of hydrogen sulfide (H<sub>2</sub>S)
2. The proper use & maintenance of PPE & SCBA systems.
3. The proper use of H<sub>2</sub>S detectors, alarms, warning systems, briefing areas, evacuation procedures, & prevailing winds (seasonal).
4. The proper techniques for first aid & rescue procedures.

In addition, supervisory personnel will be trained in the following areas:

1. The effects of H<sub>2</sub>S metal components. If high tensile tubulars are to be used, personnel will be trained in their special maintenance requirements.
2. Corrective action & shut-in procedures when drilling or reworking a well, BOP & well control procedures.
3. The contents & requirements of the H<sub>2</sub>S Drilling Operations Plan & Public Protection Plan.

There will be an initial training session just prior to encountering a known or probable H<sub>2</sub>S zone (within 3 days or 500ft) and weekly H<sub>2</sub>S & well control drills for all personnel in each crew. The initial training session shall include a review of the site specific H<sub>2</sub>S Drilling Operations Plan and the Public Protection Plan.

### **II. H<sub>2</sub>S Safety Equipment & Systems**

Note: All H<sub>2</sub>S safety equipment will be installed, tested, & operational when drilling reaches a depth of 500' above, or three days prior to penetrating the first zone containing or reasonably expected to contain H<sub>2</sub>S.

#### **A. Well Control Equipment:**

HOBBS OCD

SEP 27 2013

RECEIVED

- Flare Line
  - Choke manifold with remotely operated choke
  - Blind rams & pipe rams to accommodate all pipe sizes with properly sized closing unit.
  - Auxiliary equipment to include: annular preventer, mud-gas separator, & rotating head.
- B. Protective equipment for essential personnel:
- 30-minute SCBA units located in the dog house & at briefing areas. As it may be difficult to communicate audibly while wearing these units, hand signals shall be utilized.
- C. H<sub>2</sub>S detection and monitoring equipment:
- (2) Portable H<sub>2</sub>S monitors positioned on location for best coverage & response. These units have warning lights & audible sirens when H<sub>2</sub>S levels of 20ppm are reached. These units are also capable of detecting SO<sub>2</sub>, which is a byproduct of burning H<sub>2</sub>S.
- D. Visual warning systems:
- Wind direction indicators: will be shown on well site diagram.
  - Caution/Danger signs shall be posted on roads providing direct access to location. Signs will be painted a high visibility yellow with black lettering of sufficient size so that it is legible at a reasonable distance from the immediate location. Bilingual signs will also be used, when appropriate.
- E. Mud program:
- The mud program has been designed to minimize the volume of H<sub>2</sub>S circulated to surface. Proper mud weight, safe drilling practices, and the use of H<sub>2</sub>S scavengers will help minimize hazards when penetrating H<sub>2</sub>S bearing zones.
- F. Metallurgy:
- All drill strings, casings, tubing, wellhead, blowout preventers, drilling spool, kill lines, and valves shall be suitable for H<sub>2</sub>S service.

**G. Communication:**

- Company vehicles equipped with cellular phones, as well as a satellite phone in the company man's trailer.

**ENDURANCE RESOURCES LLC HAS CONDUCTED A REVIEW TO DETERMINE IF AN H2S CONTINGENCY PLAN IS REQUIRED FOR THE ABOVE MENTIONED WELL. WE WERE ABLE TO CONDUCT THAT ANY POTENTIAL HAZARDOUS VOLUME WOULD BE MINIMAL (IF ANY PRESENT) FROM SURFACE TO TD.**
