

Surface Use Plan  
W. Bell Lake "26" Federal #2H  
Cimarex Energy Co. of Colorado  
Unit M, Section 26  
T23S-R33E; Lea County, NM

30-025-41473

1. **Existing Roads:** Area maps, Exhibit "A" shows the proposed well site as staked. Exhibit "B" is a reproduction of Eddy Co. General Highway Map. Exhibit "C" is a reproduction of a USGS Topographic Map, and Exhibit "C-1" is a well site layout map, showing proposed road to location and existing road. Existing road shown on Exhibits "C," "C"-1," will be maintained in a condition equal to or better than current conditions.

- A. The maximum width of the driving surface will be 15.' The road will be crowned and ditched with a 2% slope from the tip of the crown to the edge of the driving surface. The ditches will be 1' deep with 3:1 slopes. The driving surface will be made of 6" rolled and compacted caliche.
- B. West approximately 25 miles from Jal, NM; from the Junction of Delaware Basin and XL, Go West on XL for 1.9 miles to proposed lease road.

2. **Planned Access Roads:** 196.7' of new, on-lease access road will be constructed to existing lease road to South.

3. **Planned E-Lines**

196.7' of 3 phase 4 wire (1) 40' pole ,electric line will be constructed to service provider tie in at South lease line following new access road construction.

4. **Location of Existing Wells in a One-Mile Radius - Exhibit A**

- A. Water wells - None known
- B. Disposal wells - None known
- C. Drilling wells - None known
- D. Producing wells - As shown on Exhibits "A"
- E. Abandoned wells - As shown on Exhibits "A"

5. **Location of Proposed Production Facilities:**

If upon completion; this well is a producer, the tank battery will be used at the W. Bell Lake 26 Federal 1 and the necessary production equipment will be installed at the wellsite. Any changes to the facilities or off-site facilities will be accompanied by a Sundry Notice. 2 4" buried HP poly lines down existing lease road to carry oil, gas, water to the W. Bell Lake 26 Federal 1 tank battery. Allocation will be based on well test. MAOP 1500 psi anticipated working pressure 200-300 psi. Gas lift will be provided by HP poly line buried in the same trench along access road to W. Bell Lake 26 Federal 1 tank battery.

6. **Location and Type of Water Supply:**

Water will be purchased locally from a commercial source and trucked over the access roads.

7. **Source of Construction Material:**

If possible, native caliche will be obtained from the excavation of drill site. Topsoil will be pushed back from the drill site and existing caliche will be ripped and compacted. Then topsoil will be stockpiled on location as depicted on Exhibit "D" (rig layout). If additional material is needed, it will be purchased from a BLM-approved pit as near as possible to the well

**Surface Use Plan**  
**W. Bell Lake "26" Federal #2H**  
Cimarex Energy Co. of Colorado  
Unit M, Section 26  
T23S-R33E; Lea County, NM

**8. Ancillary Facilities:**

- A. No camps or airstrips to be constructed.

**9. Well Site Layout:**

- A. Exhibit "D" shows location and rig layout.
- C. Mud pits in the closed circulating system will be steel pits and the cuttings will be stored in steel containment pits.
- D. Cuttings will be stored in steel pits until they are hauled to a state-approved disposal facility.
- E. If the well is a producer, those areas of the location not essential to production facilities will be reclaimed and seeded per BLM requirements.

**10. Plans for Restoration of Surface:**

Rehabilitation of the location will start in a timely manner after all drilling operations cease. The type of reclamation will depend on whether the well is a producer or a dry hole.

Drainage systems, if any, will be reshaped to the original configuration with provisions made to alleviate erosion. These may need to be modified in certain circumstances to prevent inundation of the location's pad and surface facilities. After the area has been shaped and contoured, topsoil from the spoil pile will be placed over the disturbed area to the extent possible. Revegetation procedures will comply with BLM standards.

If the well is a dry hole, the pad and road area will be recountoured to match the existing terrain. Topsoil will be spread to the extent possible. Revegetation will comply with BLM standards.

Should the well be a producer, those areas of the location not essential to production facilities and operations will be reclaimed and seeded per BLM requirements. Please see Production Facilities Layout Diagram, exhibit D-1.

**11 Other Information**

- A. Topography consists of a sloping plane with loose tan sands. Vegetation is mainly yucca, mesquite and shin oak.
- B. The wellsite is on surface owned by Brininstool XL Ranch LLC . We have an agreement regarding access and surface restoration after drilling. The land is used mainly for farming, cattle ranching, recreational use, and oil and gas
- C. In lieu of an archaeological survey report, Cimarex will be submitting an MOA application for this well pad and access road since they are within the MOA boundary.
- D. There are no know dwellings within 1½ miles of this location.
