These wells are presently producing is at a rate of 12.5%. Therefore the BLM's interest is presently all the same at that 12.5% royalty rate. Lease NMNM106714 royalty rate is 12.5%. Lease NMNM106715 royalty rate is 12.5 - 32% which is a step rate. Lease NMNM067987 royalty rate is 12.5 - 25% which is a schedule B. Lease NMNM106716 royalty rate is 12.5%.

Oil & Gas metering:

The Conoco Federal #2 Battery is located at Sec 18 SWSW, T18S, R32E on federal lease NMNM106716 in Lea County, NM. The production from all five wells (Conoco Fed #2, Inca Fed #5, Jade Fed #2, Geronimo Fed #1, and Geronimo Fed #6) will come to a common production header where one well can be isolated for test and the remaining wells will go through the production line. The production of the well on test will flow to the three-phase separator. The production from the four remaining wells will be routed through a common production three-phase heater treater.

The Conoco Federal #2 central tank battery will have two oil tanks, one test gas meter, (Cameron Scanner 2000 Meter, meter #*) and sold thru one common gas sales meter, (μ FLO 6213, 700227-00) located on the northeast side of the Conoco Fed #2 battery that all five wells will utilize. Oil, gas, and water volumes from each well producing to this battery will be determined by using a test separator at the proposed facility, so that one well is always producing through the testing equipment. Each well will be routed through the test separator (and corresponding oil, water, and gas meters) at least once per month, for a minimum of 24 hours to allocate production back to each well.

The production for the well on test will flow to the three-phase test separator. Gas will be separated off and continue through the test gas meter (Cameron Scanner 2000 Meter, meter #*) or to the gas flare meter (Cameron Scanner 2000 Meter, meter #*) during any production shut down period. The water and oil will be separated, and the oil will be metered with a NUFLO liquid turbine meter (meter#*). Water will be metered using a turbine meter. Once metered, the water from the well on test will flow to the water production line. All of the water will then flow to the common 500 BBL produced water fiberglass tank. After the oil is metered, it will then flow to either the heater treater for additional cleanup or directly into the common oil production line and into one of the 500 BBL steel oil tanks. The four remaining wells will flow through the production heater treater. The gas will be separated off and will continue through the common gas sales meter (μ FLO 6213, meter #*) or to the gas flare meter (Cameron Scanner 2000 Meter, meter #*) during any production shut down period. The oil that is separated off of the production heater treater will flow to the common oil production line and into one of the 500 BBL steel oil tanks. The water that is separated off of the production heater treater will flow to the common water production line and then to the 500 BBL produced water fiberglass tank.

Oil production will be allocated on a daily basis from the NUFLO (meter#*) liquid turbine test meter located on the oil discharge line of the 3-phase test separator. The test meter will be a NUFLO liquid turbine. This meter will be proven, as per API, NMOCD, and BLM specifications, when installed, once per month for the first 3 months (to establish a consistent repeatability factor), and then quarterly thereafter. The factor obtained will be used to allocate the production volumes. Gas production will be allocated on a daily basis from the test gas meter (Cameron Scanner 2000 Meter, meter #*) located downstream of the test separator. The gas production from the production heater treater and the gas

from the test separator will commingle after the gas from the test separator has been measured. All of the commingled gas will flow through the gas sales meter (μ FLO 6213, 700227-00) located on the northeast side of the facility. These meters will be calibrated on a regular basis per API, NMOCD, and BLM specifications. The BLM and OCD will be notified of any future changes in the facility.

*Meter numbers to be supplied upon installation of battery and meters

Process & Flow Descriptions:

The flow of production is shown in detail on enclosed facility diagrams and map which shows the lease boundaries, location of wells, facility and gas sales meter. The commingling of this production is the most effective economical means of producing the reserves and will not result in reduced royalty or improper measurement of production. The proposed commingling will reduce the surface facility footprint and overall emissions. This is the only way SM Energy will be able to produce these wells so as to not be forced to prematurely P&A these wells. This will allow for the most efficient and most economic recovery of minerals as per 43CFR3162.1(a).

As per production over the last 2 years, these wells produce at a very low volume and have never and are not expected to produce above a royalty rate of 12.5%.

SM Energy Company, understand the requested approval will not constitute the granting of any right-of-way or construction rights not granted by the lease instrument.

Working, royalty and overriding interest owners have been notified of this proposal via certified mail (see attached).

Ladies and Gentleman:

This is to advise you that SM Energy Company is filing an application with the New Mexico Oil Conservation Division ("NMOCD") seeking approval for a Central Tank Battery for Off-Lease Gas Measurement, Oil Storage & Oil Sales for the above mentioned wells.

These five (5) wells were previously surface commingled into the East Shugart Delaware Unit ("ESDU") Batteries. Per directive from the Bureau of Land Management ("BLM"), SM Energy Company will now surface commingle production from these aforementioned wells into a single facility independent from "ESDU".

A copy of our application submitted to the Division is attached.

Any objections or requests that a hearing should be held regarding this application must be submitted to the New Mexico Oil Conservation Division Santa Fe office within 20 days from the date of this letter.

Please contact the undersigned at (432) 848-4800 should you have any questions or need anything further.

Sincerely,

A handwritten signature in black ink, appearing to read 'B. Clark', with a stylized flourish at the end.

**Condition of Approval
Commingling on and off lease**

1. This approval is subject to like approval by the New Mexico Oil Conservation Division.
2. This agency shall be notified of any spill or discharge as required by NTL-3A.
3. This agency reserves the right to modify or rescind approval whenever it determines continued use of the approved method may adversely affect the surface or subsurface environments.
4. This approval does not constitute right-of-way approval for any off-lease activities. Within 30 days, an application for right-of-way approval must be submitted to the Realty Section if not already done.
5. Approval for combining production from various sources is a privilege which is granted to lessees for the purpose of aiding conservation and extending the economic life of leases. Applicants should be cognizant that failure to operate in accordance with the provisions outlined in the Authorized Officer's conditions of approval and/or subsequent stipulations or modifications will subject such approval to revocation.
6. Gas measurement for allocation must be measured as per Onshore Order #5 for sales meters.
7. All gas and oil subject to royalty shall be measured as per federal regulations and shall be reported to ONRR as required. All gas which is vented, flared or used on lease shall be reported as per NTL-4A to ONRR. All gas which is vented or flared shall be subject to royalty, unless prior approval was given by the authorized officer.
8. This agency shall be notified of any change in sales method or location of sales point.
9. Additional wells and/or leases require additional commingling approvals.
10. Notify this office 24 Hrs. prior to any meter proving to allow time for an inspector to witness.
11. This approval grants authorization for any off lease storage, measurement, and sales which may be appropriate.
12. **If any wells are added to Lease NM106715 or NM67987 or if a well which is presently on one of these leases is recompleted into another zone this approval will no-longer be valid until it has been reevaluated and the royalty rate is determined to still fall under the same 12.5% in which this approval is being approved.**
