Cc: Goetze, Phillip, EMNRD

Maxey;

I spoke to Phillip Goetze regarding the well above.

After reviewing the 3160-5 Sundry, approved by Paul Schwartz 4/14/2015 and initialed by OCD 4/22/2015, the well's tubing has been changed from 2 3/8 to 3 1/2 j55. According to IPI 479 approved 1/20/2015, the operator was granted an increase in pressure to 2260 psi. from 969 psi from the original SWD-486.

This increase in pressure was granted and based on the SRT conducted on 10/21/2014 thru a 2 3/8 tubing.

Please advise on how you wish to inform the operator (thru letter, email or your verbal communication) regarding the above findings.
