13. Describe Proposed or Completed Operation: Clearly state all pertinent details, including estimated starting date of any proposed work and approximate duration thereof. If the proposal is to deepen directionally or recompleate horizontally, give subsurface locations and measured and true vertical depths of all pertinent markers and zones. Attach the Bond under which the work will be performed or provide the Bond No. on file with BLM/BIA. Required subsequent reports must be filed within 30 days following completion of the involved operations. If the operation results in a multiple completion or recompleation in a new interval, a Form 3160-4 must be filed once testing has been completed. Final Abandonment Notices must be filed only after all requirements, including reclamation, have been completed and the operator has determined that the site is ready for final inspection.

As per attached letter from W.J. Collier ^{Work in} ~~Re-enter~~ using a portable reverse circulating & drilling unit. Clean the casing out to below the current San Andreas perforations (4,630 - 4,730); test the perforations for gas flow; and if necessary, re-perforate the well and acidize to reestablish production.

This well has been shut in w/out approval since 10/2012.
This sundry expires 10/15/2018. Submit sundry within 5 days of production startup stating the time the well went back on production. The work approved in this sundry is only for the current production zone.

To Whom It may concern

Big Al Oil and Gas has contracted WJC, Inc. to provide recommendations and supervision services to return, the Light Federal Com Well #1 located in Roosevelt Co., NM., to production. We expect to start the reentry by first week of September 2018 after all working interest owners have approved the ^{workover} re-entry and have remitted their share of the expense and as soon as the equipment is available to move on the well.

The plan is to move a well service unit on the well along with a portable reverse circulating and drilling unit. Clean the casing out to below the current San Andres perforations (4,630' - 4,730'); test the perforations for gas flow; and if necessary reperforate the well and acidize to reestablish production.
