13. Describe Proposed or Completed Operation: Clearly state all pertinent details, including estimated starting date of any proposed work and approximate duration thereof. If the proposal is to deepen directionally or recomple horizontally, give subsurface locations and measured and true vertical depths of all pertinent markers and zones. Attach the Bond under which the work will be performed or provide the Bond No. on file with BLM/BIA. Required subsequent reports must be filed within 30 days following completion of the involved operations. If the operation results in a multiple completion or recompletion in a new interval, a Form 3160-4 must be filed once testing has been completed. Final Abandonment Notices must be filed only after all requirements, including reclamation, have been completed and the operator has determined that the site is ready for final inspection.

2. Rig up casing crew and run 2-7/8 EUE tubing to float collar
3. Pump cement job to completely fill annulus with cement from the float collar to surface
 - a. Leave tubing completely full of cement to surface
4. Cut off casing 3 – 4' below GL
5. Weld plate to cutoff casing. Plate needs to include the following information:
 - a. Company name
 - b. Well Name and Number
 - c. API Number
 - d. Legal Description
6. Take GPS measurement of plate location
 - a. This can be taken with a hand-help GPS (does not need to be certified or done by a surveying company)
 - b. Take picture of GPS coordinate and plate
 - i. Send to engineer to be stored in well file for this well
 - c. Name plate example is shown below.
7. GPS coordinate information / picture will be given to regulatory to file with C-103 (plug and abandon report)
 - a. Upon completion of drilling / completion, regulatory will file C-103, NMOCD will inspect location, bond on well will be released

Halliburton personnel use their best efforts in gathering information and their best judgment in interpreting it, but any interpretation, research, analysis or recommendation furnished by Halliburton are opinions based upon inferences from measurements and empirical relationships and assumptions, which inferences and empirical relationships and assumptions are not infallible, and with respect to which professionals in the industry may differ. iCem 3D Displacement results are used to understand how fluids intermix during a cement job. Simulation and 3D displacement results are not intended as and should not be used as a replacement for bond logs in determining top of cement. Current 3D model calculations are known to model more volume than the input volume for standard cases due to known calculation improvements required. For rotational cases, the modeled volume will be impacted by the same calculations impacting the standard cases, as well as additional constraints imposed to make the calculation time required operationally feasible. Therefore, until further notice, 3D displacement results should not be used for replacement of a bond log, or used as an identifier of top of cement. **HALLIBURTON IS UNABLE TO GUARANTEE THE ACCURACY OF ANY CHART INTERPRETATION, RESEARCH ANALYSIS, OR JOB RECOMMENDATION** and any interpretation or recommendation is not for use of or reliance upon by any third party.
