GAS CAPTURE PLAN

Date: 2/28/2019

Original Operator & OGRID No.: EOG Resources, Inc. 7377
 Amended - Reason for Amendment: _____

This Gas Capture Plan outlines actions to be taken by the Operator to reduce well/production facility flaring/venting for new completion (new drill, recomplete to new zone, re-frac) activity.

Note: Form C-129 must be submitted and approved prior to exceeding 60 days allowed by Rule (Subsection A of 19.15.18.12 NMAC).

Well(s)/Production Facility – Name of facility

The well(s) that will be located at the production facility are shown in the table below.

Well Name	API	Well Location (ULSTR)	Footages	Expected MCF/D	Flared or Vented	Comments
Savage 2 State Com 502H	30-025-*****	3-2-25S-32E	462' FNL & 1538' FWL	±3500	None Planned	APD Submission
Savage 2 State Com 503H	30-025-*****	3-2-25S-32E	484' FNL & 1562' FWL	±3500	None Planned	APD Submission
Savage 2 State Com 504H	30-025-*****	3-2-25S-32E	507' FNL & 1586' FWL	±3500	None Planned	APD Submission
Savage 2 State Com 505H	30-025-*****	2-2-25S-32E	403' FNL & 3108' FWL	±3500	None Planned	APD Submission
Savage 2 State Com 506H	30-025-*****	2-2-25S-32E	436' FNL & 2212' FEL	±3500	None Planned	APD Submission
Savage 2 State Com 507H	30-025-*****	1-2-25S-32E	469' FNL & 1214' FEL	±3500	None Planned	APD Submission
Savage 2 State Com 507H <u>50817</u>	30-025-***** <u>49695</u>	1-2-25S-32E	496' FNL & 1233' FEL	±3500	None Planned	APD Submission

Gathering System and Pipeline Notification

Well(s) will be connected to a production facility after flowback operations are complete, if gas transporter system is in place. The gas produced from production facility is dedicated to **Lucid Energy** and will be connected to **EOG Resources** low/high pressure gathering system located in Eddy/Lea County, New Mexico. **EOG Resources** provides (periodically) to **Lucid Energy** a drilling, completion and estimated first production date for wells that are scheduled to be drilled in the foreseeable future. In addition, **EOG Resources** and **Lucid Energy** have periodic conference calls to discuss changes to drilling and completion schedules. Gas from these wells will be processed at **Lucid Energy** Processing Plant located in **Lea** County, New Mexico. The actual flow of the gas will be based on compression operating parameters and gathering system pressures.

Flowback Strategy

After the fracture treatment/completion operations, well(s) will be produced to temporary production tanks and gas will be flared or vented. During flowback, the fluids and sand content will be monitored. When the produced fluids contain minimal sand, the wells will be turned to production facilities. Gas sales should start as soon as the wells start flowing through the production facilities, unless there are operational issues on **Lucid Energy** system at that time. Based on current information, it is **EOG Resources'** belief the system can take this gas upon completion of the well(s).

Safety requirements during cleanout operations from the use of underbalanced air cleanout systems may necessitate that sand and non-pipeline quality gas be vented and/or flared rather than sold on a temporary basis.

Alternatives to Reduce Flaring

Below are alternatives considered from a conceptual standpoint to reduce the amount of gas flared.

- **Power Generation – On lease**
 - Only a portion of gas is consumed operating the generator, remainder of gas will be flared
- **Compressed Natural Gas – On lease**
 - Gas flared would be minimal, but might be uneconomical to operate when gas volume declines
- **NGL Removal – On lease**
 - Plants are expensive, residue gas is still flared, and uneconomical to operate when gas volume declines
