GAS CAPTURE PLAN

Date: 3/1/2019

Original
 Amended - Reason for Amendment: _____

Devon & OGRID No.: Devon Energy Production Co., L.P. 6137

This Gas Capture Plan outlines actions to be taken by the Devon to reduce well/production facility flaring/venting for new completion (new drill, recomplete to new zone, re-frac) activity.

Note: Form C-129 must be submitted and approved prior to exceeding 60 days allowed by Rule (Subsection A of 19.15.18.12 NMAC).

Well(s)/Production Facility – Name of facility

The well(s) that will be located at the production facility are shown in the table below.

| Well Name | API | Well Location (ULSTR) | Footages | Expected MCF/D | Flared or Vented | Comments |
|----------------------------------|-----|---------------------------|-------------------|----------------|------------------|-------------------------|
| Boundary Raider 6-7 Fed Com 511H | n/a | UNIT D. SEC 6. T23S. R32E | 535 FNL, 620 FWL | | | BOUNDARY RAIDER 6 CTB 2 |
| Boundary Raider 6-7 Fed Com 512H | n/a | UNIT C. SEC 6. T23S. R32E | 550 FNL, 2255 FWL | | | BOUNDARY RAIDER 6 CTB 2 |
| Boundary Raider 6-7 Fed Com 521H | n/a | UNIT D. SEC 6. T23S. R32E | 535 FNL, 650 FWL | | | BOUNDARY RAIDER 6 CTB 2 |
| Boundary Raider 6-7 Fed Com 522H | n/a | UNIT C. SEC 6. T23S. R32E | 550 FNL, 2285 FWL | | | BOUNDARY RAIDER 6 CTB 2 |

Gathering System and Pipeline Notification

Well(s) will be connected to a production facility after flowback operations are complete, if DCP system is in place. The gas produced from production facility is dedicated to DCP and will be connected to DCP low/high pressure gathering system located in Lea County, New Mexico. It will require 0' of pipeline to connect the facility to low/high pressure gathering system. Devon provides (periodically) to DCP a drilling, completion and estimated first production date for wells that are scheduled to be drilled in the foreseeable future. In addition, Devon and DCP have periodic conference calls to discuss changes to drilling and completion schedules. Gas from these wells will be processed at DCP Processing Plant located in Sec 19, Twn. 19S, Rng. 32E, Lea County, New Mexico. The actual flow of the gas will be based on compression operating parameters and gathering system pressures.

Flowback Strategy

After the fracture treatment/completion operations, well(s) will be produced to temporary production tanks and gas will be flared or vented. During flowback, the fluids and sand content will be monitored. When the produced fluids contain minimal sand, the wells will be turned to production facilities. Gas sales should start as soon as the wells start flowing through the production facilities, unless there are operational issues on DCP system at that time. Based on current information, it is Devon's belief the system can take this gas upon completion of the well(s).

Safety requirements during cleanout operations from the use of underbalanced air cleanout systems may necessitate that sand and non-pipeline quality gas be vented and/or flared rather than sold on a temporary basis.

Alternatives to Reduce Flaring

Below are alternatives considered from a conceptual standpoint to reduce the amount of gas flared.

- Power Generation – On lease
 - Only a portion of gas is consumed operating the generator, remainder of gas will be flared
- Compressed Natural Gas – On lease
 - Gas flared would be minimal, but might be uneconomical to operate when gas volume declines
- NGL Removal – On lease
 - Plants are expensive, residue gas is still flared, and uneconomical to operate when gas volume declines
