13. Describe Proposed or Completed Operation (clearly state all pertinent details, including estimated starting date of any proposed work and approximate duration thereof. If the proposal is to deepen directionally or recomplate horizontally, give subsurface locations and measured and true vertical depths of all pertinent markers and zones. Attach the Bond under which the work will be performed or provide the Bond No. on file with BLM/BIA. Required subsequent reports shall be filed within 30 days following completion of the involved operations. If the operation results in a multiple completion or recomplate in a new interval, a Form 3160-4 shall be filed once testing has been completed. Final Abandonment Notices shall be filed only after all requirements, including reclamation, have been completed, and the operator has determined that the site is ready for final inspection.)

Initial test are showing that all the perforations are covered with fill stopping them up and letting a small amount of production in. We propose to rig up pulling unit and a Foam Air unit with bit and collars and go in and clean out well bore to TD of 3778'. Acidize perforations from 3588' to 3758' to clean well bore and then put back on production, pumping.

This action will take place as soon as possible upon obtaining a pulling unit and foam air unit. I have repeatedly checked with Chuck at Eunice Well service to obtain rig and equipment he has assured me that I'm moving up the list but as of this date I'm still out 60 to 70 days for the equipment (Sept 6, 2006). We have also contacted numerous other service companies and as Eunice Well Service we are on their list also and we will take first service unit that comes available and take care of this clean out.
