1/4/07 POOH with kill string, changed handling tools from 2-3/8" to 2-7/8". Started testing BOPs. Replaced leaking rubber on the rams. Tested to 500 psi. RIH with straddle packer on 2-7/8" workstring. R/U Petroplex and pumped 15 bbls of 7.5% acid from 2840' pulling up to 2748'. Several zones communicating. L/D 7 jts, set packer.

1/5/07 Casing - 0 psi, tubing - 25 psi. R/U vacuum truck and flowed the well to the truck. R/D vac truck, POOH L/D 2-7/8" workstring and packer. Changed rams to 2-3/8". Tested BOPs to 500 psi. P/U lock set pkr & RIH on tubing to 2693'. Set and tested to 500 psi. R/U pump truck, circulated 50 bbls of packer fluid. N/D BOP and flanged well up.

1/8/07 Tried to test pkr and it would hold with Tbg valve closed but would circ. with it open. Removed wellhead, installed BOP's and well tested fine. Inspected wellhead and found bad threads causing communications. Replaced wellhead with another one. Tested good. Made 4 swab runs, fluid initially at 150', recovered approx 20 bbls fluid. 0 psi on well and fluid level at 40-50'. Let well sit overnight.

1/9/07 Checked pressure, well dead. RU lubricator and made 1 swab run and tag fluid at +/- 2650', SN @ 2688'. RD lubricator, ND well head, NU BOP and test to 500 psi. Release packer, POOH with tubing and packer. RIH with 5-1/2" CIBP, 12 joints tubing with 3 sacks of cement and rest of tubing. Set plug @ 2700'. POOH with tubing and setting tool. RIH open ended to +/- 2584'. Load well and test to 540 psi. Lost 5 psi in 30 minutes. Circulated 60 bbls of 2% KCL in packer fluid. ND BOP, NU wellhead. Secured well.

1/10/07 Run mechanical integrity test, witnessed by New Mexico rep. Maxey Brown. Move off location, clean site. Original MIT chart is attached.
