13. Describe Proposed or Completed Operations (Clearly state all pertinent details, and give pertinent dates, including estimated date of starting any proposed work. If well is directionally drilled, give subsurface locations and measured and true vertical depths for all markers and zones pertinent to this work.)*

Pogo Producing Company respectfully requests an exception to stipulation #4 on the subject well APD. PVT & flow line monitors are useless in this situation since the wells in this field are drilled routinely through the reserve pit using fresh water as drilling fluid as opposed to drilling through steel pits. The upper and 1st Bone Spring sands are the productive interval in this area and both require a sand frac be used in order to produce them. Offset information and actual experience in this field shows that precautions such as trip tanks, stroke counters, PVT & flow line indicators are not needed.
