NATURE OF RELEASE

Type of Release Line leak – produced water	Volume of Release 150 bw	Volume Recovered 50 bw
Source of Release Injection line	Date and Hour of Occurrence 08/24/07 6:30am	Date and Hour of Discovery 08/24/07 8:00am
Was Immediate Notice Given? <input checked="" type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> Not Required	If YES, To Whom? Pat Caperton	
By Whom? Tony Summers	Date and Hour 08/24/07 2:00pm	
Was a Watercourse Reached? <input type="checkbox"/> Yes <input checked="" type="checkbox"/> No	If YES, Volume Impacting the Watercourse.	

If a Watercourse was Impacted, Describe Fully.*

Describe Cause of Problem and Remedial Action Taken.* Leak was discovered by lease operator 9:00am. Line was immediately shut in. Leak occurred in on a steel connection in a buried fiberglass line, corrosion. Vacuum truck was called and picked up 50 bbls of free standing produced water. Approximately 150 barrels of produced water were spilled. Average chlorides for this water is 13000 ppm

Describe Area Affected and Cleanup Action Taken.* Spill was in sandy area with limited vegetation. Contaminated soil will be removed down to NMOCD standards and replaced with clean soil. See attached map of spill site. According to NMOSE website, nearest depth to ground water found (sec 5) is 106' giving a ranking of 10.

Note two spill maps, one is the original and the other divides the spill area into section A, B, C. **Section A** (see pic 1) - removed approximately 150 yards of contaminated soil in this section, area closest to original leak site. Note samples 1 and 2 were taken after soil removed (see pic 1A). New top soil has since been brought into area and refilled and planted (see pic 1B). **Section B** (leak ran down road, see pic 2) - removed approximately 6 yds of contaminated sandy road area in this section (see pic 2A). Note samples 3 and 4 were taken after soil removed. Caliche has since been brought back in and road repaired (see pic 2B). **Section 3** (see pic 3) – the produced water did run this far out into the pasture, but the rate and amount was small. In two different areas, took samples at 1', 2', and 3'. No soil was removed from this area. Note samples 11, 22, 33 are composite samples. Took 1' samples at each point and combined (11), 2' and combined (22), and 3' and combined (33). Note Cardinal Lab samples dated 9/11/07...also special note on sample B (background) at 400ppm? Grab sample for background was taken approximately 40' from spill site. Leak site will be considered closed unless NMOCD rules different. This leak was close to MLMU Inj. Hdr #5 Thank you ...Tony

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to NMOCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the NMOCD marked as "Final Report" does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to ground water, surface water, human health or the environment. In addition, NMOCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.
