13. Describe Proposed or Completed Operation (clearly state all pertinent details, including estimated starting date of any proposed work and approximate duration thereof. If the proposal is to deepen directionally or recompleat horizontally, give subsurface locations and measured and true vertical depths of all pertinent markers and zones. Attach the Bond under which the work will be performed or provide the Bond No. on file with BLM/BIA. Required subsequent reports shall be filed within 30 days following completion of the involved operations. If the operation results in a multiple completion or recompleat in a new interval, a Form 3160-4 shall be filed once testing has been completed. Final Abandonment Notices shall be filed only after all requirements, including reclamation, have been completed, and the operator has determined that the site is ready for final inspection.)

The Cotton Draw Unit #96 was drilled to a total depth of 4950'. 7" csg was run to TD and cemented to surface in January 2006. The well was left in T/A status pending completion as an injection well within the planned CO2 project area. It was never perforated or stimulated. A MIT was run and passed on 4/12/07 and T/A status granted for six months until 10/12/07.

Pogo Producing was purchased by Plains Exploration in July 2007 and is supposed to close on November 6th 2007. Plains is planning on continuing Pogo's plan with conducting a tertiary (CO2) recovery program in the Paduca Field in which the Cotton Draw Unit #96 will be a part of. With the purchase of Pogo by Plains and the scarcity of CO2 at this time, plans are delayed until Plains can get their feet on the ground and an adequate supply of CO2 can be secured

Accordingly, Pogo request that the NMOCD allow this well remain TA'd until Plains secures a CO2 contract and can continue the project as originally planned. The CDU #96 will be completed at that time as an injector. An MIT will be conducted and witnessed yearly until such time the well is put on injection.
