RE: Remediation Plan  
Myers Langlie Mattix Well #102  
UL -J, Sec 36, T23S, R11E  
36

On 12/28/07 at 8 AM, lease operator discovered a leak on MLMU Well #102 in a 4" poly flowline (not buried). Line had froze and busted. Well was shut in and vacuum truck called to pick up all free standing liquids. Land owner (Kelly Myers) was immediately called. Approximately 12 bo and 12 bw was leaked and 10 bo x 10 bw was picked up. The leak happened just off the location to the north in an area measuring approximately 50' x 235', (see attached map). The average chlorides for this particular produced water are 13,000 ppm. The NMSEO states average depth to water in this area is 120' giving area a ranking of 0. Remediation of spill site will be as follows.

Piping will be repaired.

Affected area will be excavated and contaminated soil will be hauled to JL Land Farm.

After removing contaminated soils, samples will be gathered from affected area and submitted to NMOCD for closure.

Any soils removed will be replaced with fresh soils.

NMOCD guidelines will be used to insure entire site is in compliance with guidelines.

If you have any questions, or if I can be of further assistance, please contact me.

Thank you,  
Tony Summers

### NATURE OF RELEASE

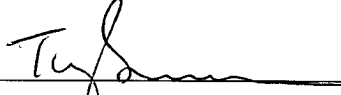

Type of Release <b>Crude oil and produced water</b>	Volume of Release <b>12 bo x 12 bw</b>	Volume Recovered <b>10 bo x 10 bw</b>
Source of Release <b>Poly flowline</b>	Date and Hour of Occurrence <b>12/28/07 6am (approx)</b>	Date and Hour of Discovery <b>12/28/07 8am</b>
Was Immediate Notice Given? x Yes <input type="checkbox"/> No <input type="checkbox"/> Not Required	If YES, To Whom? <b>Left message on Pat Richards office answering machine</b>	
By Whom? <b>Tony Summers</b>	Date and Hour <b>12/29/07 9:50 am</b>	
Was a Watercourse Reached? <input type="checkbox"/> Yes x No	If YES, Volume Impacting the Watercourse.	

If a Watercourse was Impacted, Describe Fully.\*

Describe Cause of Problem and Remedial Action Taken.\* Lease operator found leak at approximately 8 am in a 4" poly flowline just off location for MLMU Well # 102. Line had froze and busted. Well was shut in and vacuum truck called and all free standing fluids were picked up. Line was repaired and returned to production that afternoon.

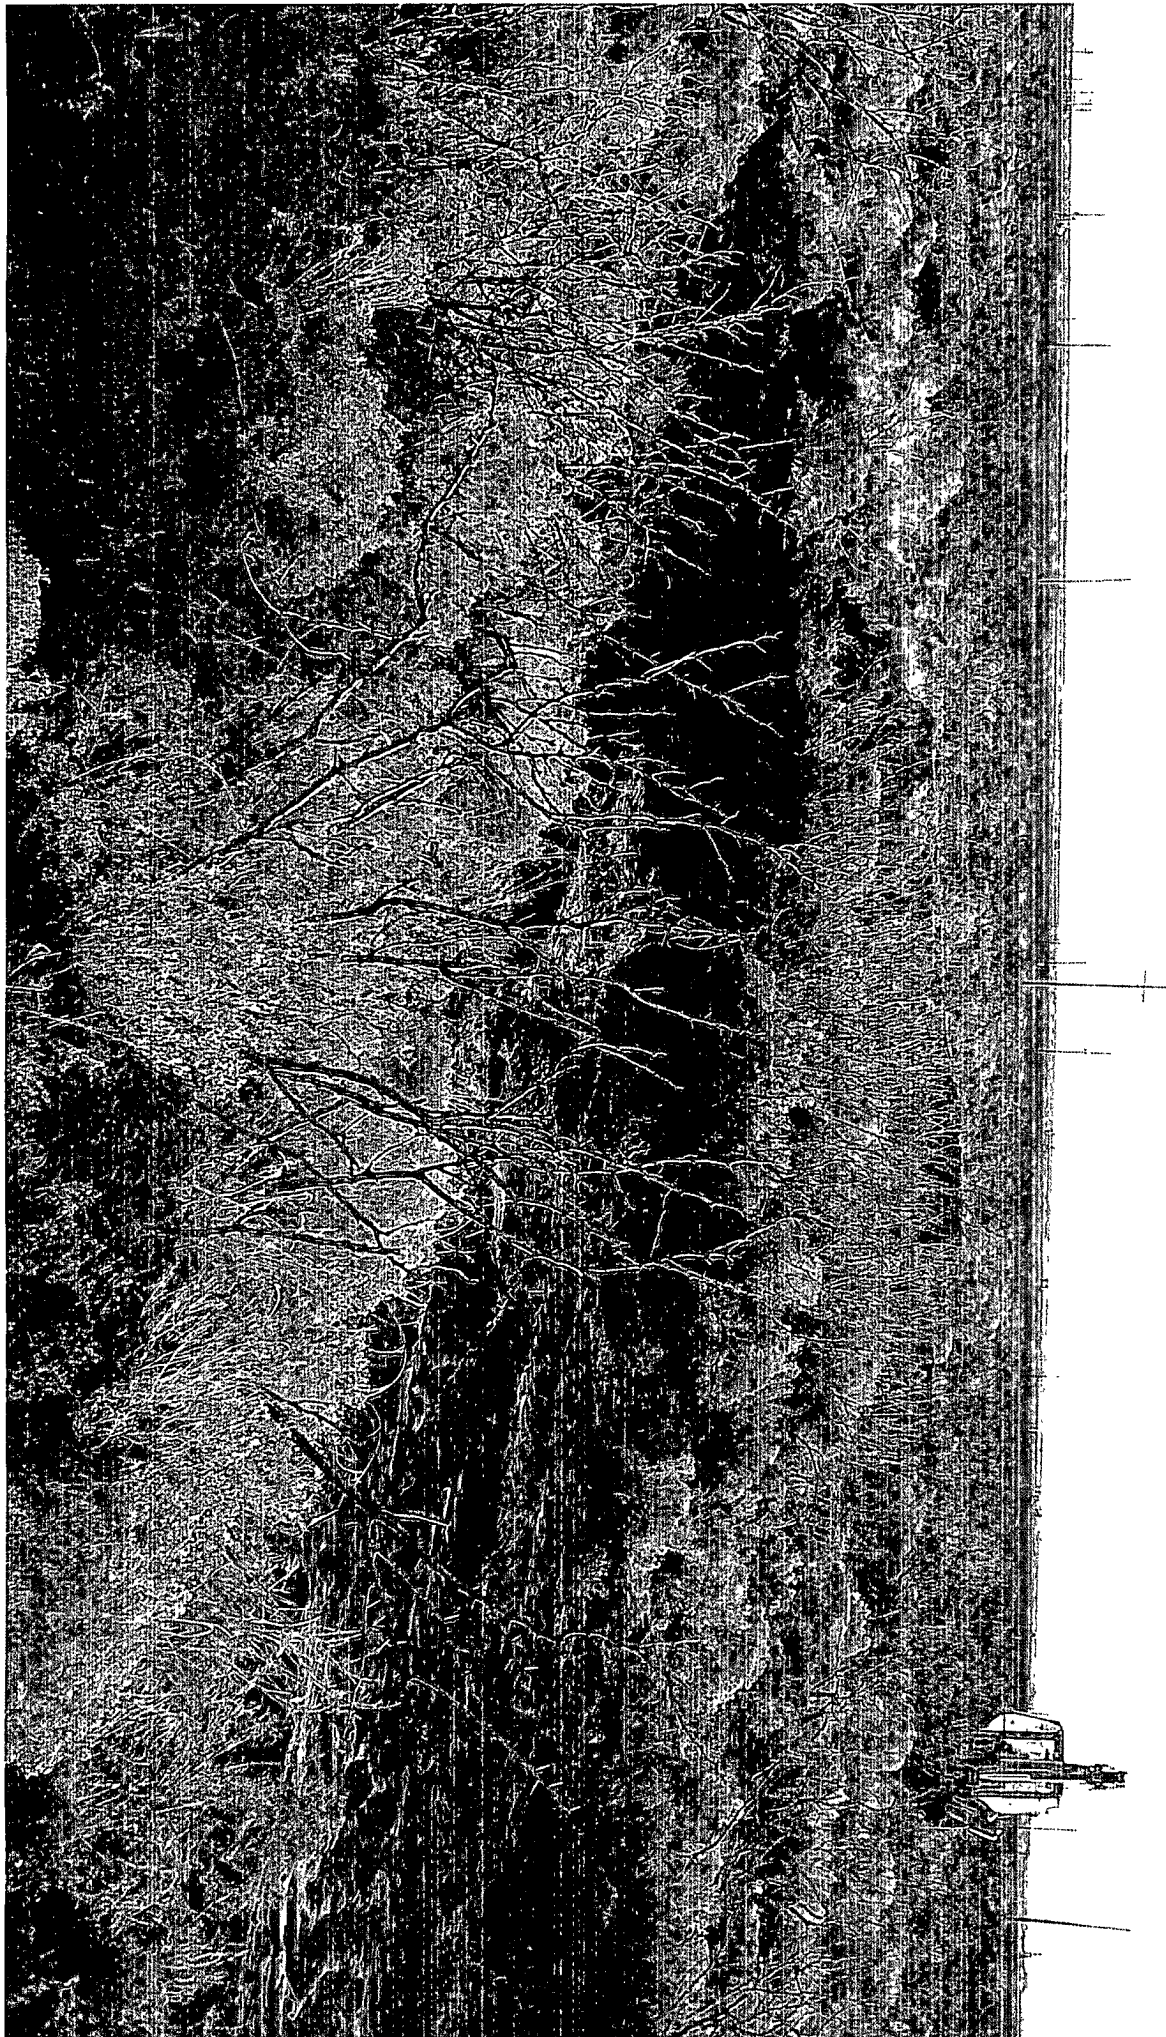

Describe Area Affected and Cleanup Action Taken.\* Area around leak site (approx 50' x 235') is mostly sand and mesquite pasture with broom weed type vegetation and sparse grass. The depth of the leak appears to run anywhere from 1 inch to 1 foot. NMSEO states average depth to water for this area to be 120' giving a ranking of 0. All visually contaminated soil will be removed and disposed of at JL Land Farm. Fresh top soil will be purchased from land owner when closure is approved.

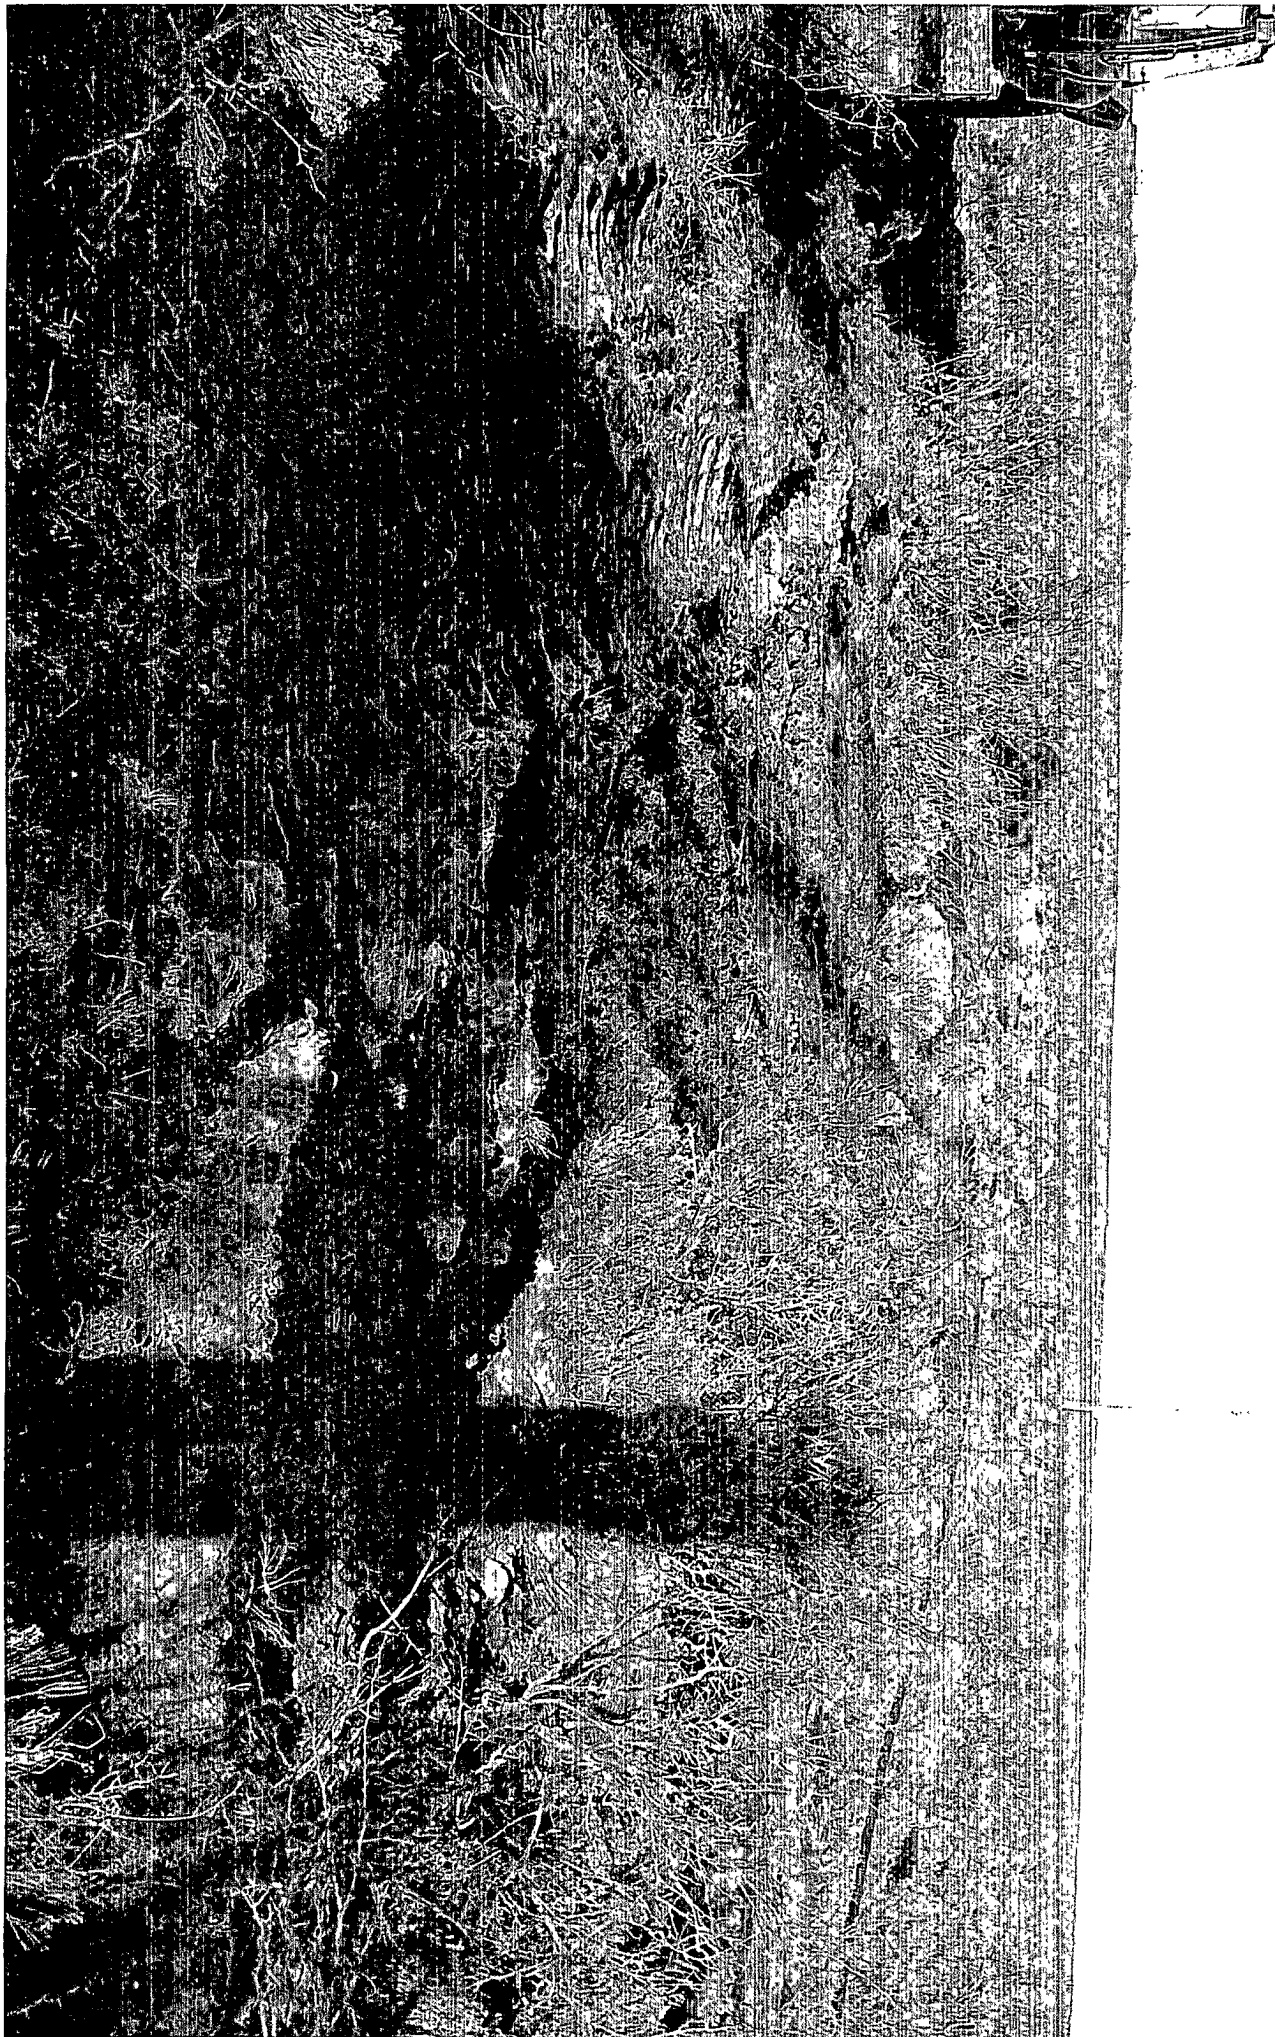

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to NMOCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the NMOCD marked as "Final Report" does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to ground water, surface water, human health or the environment. In addition, NMOCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.
