SUNDRY NOTICES AND REPORTS ON WELLS

Do not use this form for proposals to drill or to re-enter an abandoned well. Use Form 3160-3 (APD) for such proposals.

SUBMIT IN TRIPLICATE - Other instructions on reverse side.

1. Type of Well
☒ Oil Well ☐ Gas Well ☐ Other

JAN 17 2008

2. Name of Operator
ConocoPhillips Company3a. Address
3300 N. "A" Street, Bldg. 6 #247 Midland TX 79705 (432)688-68844. Location of Well (Footage, Sec., T., R., M., or Survey Description)
660' FNL & 660' FWL
Sec. 29, T-20-S, R-38-E, UL "D"

5. Lease Serial No.

LC 031670B

6. If Indian, Allottee or Tribe Name

7. If Unit or CA/Agreement, Name and/or No.

8. Well Name and No.

SEMU McKee #11

9. API Well No.

30-025-07846

10. Field and Pool, or Exploratory Area

Warren; McKee Simpson

11. County or Parish, State

Lea
New Mexico

12. CHECK APPROPRIATE BOX(ES) TO INDICATE NATURE OF NOTICE, REPORT, OR OTHER DATA

13. Describe Proposed or Completed Operation (clearly state all pertinent details, including estimated starting date of any proposed work and approximate duration thereof. If the proposal is to deepen directionally or recompletable horizontally, give subsurface locations and measured and true vertical depths of all pertinent markers and zones. Attach the Bond under which the work will be performed or provide the Bond No. on file with BLM/BIA. Required subsequent reports shall be filed within 30 days following completion of the involved operations. If the operation results in a multiple completion or recompletable in a new interval, a Form 3160-4 shall be filed once testing has been completed. Final Abandonment Notices shall be filed only after all requirements, including reclamation, have been completed, and the operator has determined that the site is ready for final inspection.)

While commencing recompletable operations on the SEMU #11, pressure was observed on the 9 5/8" intermediate casing string. The well has 13 3/8" surface casing at 252' with the top of cement at surface, 9 5/8" intermediate casing at 2834' with the top of cement at 405', and 7" production casing at 9320' with the top of cement at 5200' by a temperature survey. No pressure has been observed on the surface casing, and the production casing passes a mechanical integrity test. In order to repair the pressure communication on the intermediate casing, the following steps are proposed:

- 1) Run a gamma ray/casing collar locator/cement bond log to verify the top of cement behind the 7" production casing.
- 2) Perforate squeeze holes above the top of cement behind the 7" production casing.
- 3) Run in hole with a packer on tubing and perform a pump-in test. Attempt to establish circulation back to the surface.
- 4) Perform a cement squeeze based on the results of the pump-in test. Attempt to circulate cement to the surface.
- 5) Test the cement squeeze and verify that the pressure on the 9 5/8" intermediate casing has been eliminated.
- 6) Continue with the recompletable operations.

Note: Verbal approval for the proposed work was obtained by Jack Lowder during a telephone conversation with Les Babyak of the BLM on 1/7/2008."
