If this is a pit closure: (1) Attach a diagram of the facility showing the pit's relationship to other equipment and tanks. (2) Indicate disposal location. (check the onsite box if you are burying in place) onsite ☒ offsite ☐ If offsite, name of facility (3) Attach a general description of remedial action taken including remediation start date and end date. (4) Groundwater encountered: No ☒ Yes ☐ If yes, show depth below ground surface ft. and attach sample results. (5) Attach soil sample results and a diagram of sample locations and excavations.

Additional Comments:

We wish to close this 110' x 75' x 12-mil lined drilling reserve pit as soon as possible. We propose to cap and encapsulate in-situ since our inspection indicates the pit liner has maintained its integrity. The reserve pit contents will be stiffened sufficiently to provide physical stability and support for the pit cover; folding the edges of the liner over the stiffened contents and capping with a 20-mil plastic liner; and covering the cap with a minimum of 3 feet of clean soil that is capable of supporting native plant growth. The plastic cap will overlap the underlying pit by at least 3 feet in all directions. Once capping is complete the surface will be contoured to prevent erosion and ponding of rainwater from occurring over the pit site.

I hereby certify that the information above is true and complete to the best of my knowledge and belief. I further certify that the above-described pit or below-grade tank has been/will be constructed or closed according to NMOCD guidelines ☒, a general permit ☐, or an (attached) alternative OCD-approved plan ☐.
