13. Describe Proposed or Completed Operation (clearly state all pertinent details, including estimated starting date of any proposed work and approximate duration thereof. If the proposal is to deepen directionally or recompleat horizontally, give subsurface locations and measured and true vertical depths of all pertinent markers and zones. Attach the Bond under which the work will be performed or provide the Bond No. on file with BLM/BIA. Required subsequent reports shall be filed within 30 days following completion of the involved operations. If the operation results in a multiple completion or recompleat in a new interval, a Form 3160-4 shall be filed once testing has been completed. Final Abandonment Notices shall be filed only after all requirements, including reclamation, have been completed, and the operator has determined that the site is ready for final inspection.)

Reclaim location, plus pit area, as well as a 1/2 mile access road. Reserve pit is 3-4' lower than existing grade. Caliche was stripped off location and a 2' cap across the entire pit area was constructed. The remaining caliche on location and access road was stripped off to native soil and disposed of. A 2' native soil cap was placed across the entire pit area using existing native soils. Location, pit area, as well as access road, were ripped 6-12" deep, leveled, and shaped for seeding purposes.

The entire location, pit, and access road, were seeded with required seed mixture. (see attached seed mixture sheet). Access road was barricaded to prohibit vehicular traffic.

Jenny Bell with BLM was called out on 3-14-08 for pre-approval inspection. All work was approved.

On 3-20-08 BLM will be on site to supervise seeding. Job completed on 3-20-08 with BLM approval

RE: 07-JKB-079 Jack Tank 7 Federal #2 NMNM55953

Dear Sir or Maam:

On September 12, 2007, we completed a field examination on the plugged Jack Tank 7 Federal #2 well located 330' FNL and 660' FEL, Section 7, T24S, R32E in Lea County, New Mexico. 43 CFR 3162.5-1 (b) states "Upon conclusion of operations, the operator shall reclaim the disturbed surface in a manner approved or reasonably prescribed by the authorized officer."

After monitoring vegetation growth at the above well location for several years, adequate and desirable native coverage has failed to grow. There is low vegetation growth over the reserve pit, in particular. Salts have leached and plastics are visible on the surface. Please submit a reclamation plan for the reserve pit. This may include deep burial, complete removal of contents, or capping (topping with two feet of caliche and one foot of native soils). If capping is the preferred method, caliche can be scraped over the pit from the well pad and access road (see below).

Caliche should be removed from the access road and well pad. Caliche can be utilized on other well pads, roads, or in the capping of the aforementioned reserve pit. Please rip and seed all disturbed locations with LPC seed mixture (see enclosed information).

Rebarricade the access road to discourage vehicular traffic.

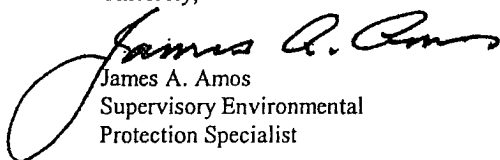

Please submit the reclamation plan for the reserve pit to Jenny Bell at the above address or fax (505-885-9264) no later than October 23, 2007. Do not initiate reclamation activities until you have been contacted by an authorized official regarding the proposal. Failure to comply with this written order will result in a Notice of Incidents of Noncompliance.

Under provisions of 43 CFR 3165.3, you may request an Administrative Review of the order described above. Such request, including all supporting documents, must be filed in writing within 20 business days of receipt of this notice and must be filed with the State Director, Bureau of Land Management, Post Office Box 27115, Santa Fe, New Mexico 87502-0115.

Such request shall not result in a suspension of the order unless the reviewing official so determines. Procedures governing appeals from the instructions, orders, or decisions are contained in 43 CFR 3165.4 and 43 CFR Part 4.

If you have any questions concerning the above matter please do not hesitate to call Jenny Bell at 505-234-5919.

Sincerely,

James A. Amos
Supervisory Environmental
Protection Specialist

RE: 07-JKB-079 Jack Tank 7 Federal #2

Dear Sir or Maam:

The Bureau of Land Management (BLM) has reviewed the reclamation proposal for Jack Tank 7 Federal #2 well location. The proposal is hereby approved according to the information provided, with the following stipulations:

1. Please contact Jenny Bell (contact information given below) at least three working days before completing dirt work and three working days prior to seeding.
2. Please use LPC seed mixture for sandy/shinnery oak habitats (see attached specifications).
2. All work should be completed by January 15, 2008.
6. The BLM will continue to monitor the surface restoration of this abandoned well site. All final abandonment / reclamation requirements will have been met when the BLM is confident that the disturbed surfaces are capable of being restored to a condition similar to their original state.

Please be advised that BLM approval does not relieve Conocophillips of any liability should operations result in pollution of surface water, ground water, or the environment. In addition, BLM approval does not relieve Conocophillips of responsibility for compliance with other federal, state, or local regulations.

If you have any questions concerning the above matter please do not hesitate to contact Jenny Bell at 505-234-5919 or Jennifer_Bell@nm.blm.gov.

Sincerely,

Jenny Bell
Environmental Protection Assistant

SEED MIXTURE LPC (SAND/SHINNERY LOCATIONS)

The holder shall seed all disturbed areas with the seed mixture listed below. The seed mixture shall be planted in the amounts specified in pounds of pure live seed (PLS)* per acre. There shall be no primary or secondary noxious weeds in the seed mixture. Seed will be tested and the viability testing of seed will be done in accordance with State law(s) and within nine months prior to purchase. Commercial seed will be certified or registered seed. The seed container will be tagged in accordance with State law(s) and available for inspection by the authorized officer.

Seed will be planted using a drill equipped with a depth regulator to ensure proper depth of planting where drilling is possible. The seed mixture will be evenly and uniformly planted over the disturbed area (smaller/heavier seeds have a tendency to drop to the bottom of the drill and are planted first; the holder shall take appropriate measures to ensure this does not occur). Where drilling is not possible, seed will be broadcast and the area shall be raked or chained to cover the seed. When broadcasting the seed, the pounds per acre are to be double the amounts listed below. The seeding will be repeated until a satisfactory stand is established as determined by the authorized officer. Evaluation of growth will not be made before completion of at least one full growing season after seeding.

Species to be planted in pounds of pure live seed* per acre (note: if broadcasting seed, amounts are to be doubled):

Species	Pound/acre
Plains Bristlegrass	5
Sand Bluestem	5
Little Bluestem	3
Big Bluestem	6
Plains Coreopsis	2
Sand Dropseed	1
Four-winged Saltbush**	5

** Four-winged Saltbush can be used around well pads and other areas where caliche cannot be removed

* Pounds of pure live seed = (Pounds of seed) x (Percent purity) x (Percent germination)
