13 Describe Proposed or Completed Operation (clearly state all pertinent details, including estimated starting date of any proposed work and approximate duration thereof. If the proposal is to deepen directionally or recompleate horizontally, give subsurface locations and measured and true vertical depths of all pertinent markers and zones. Attach the Bond under which the work will be performed or provide the Bond No. on file with BLM/BIA. Required subsequent reports shall be filed within 30 days following completion of the involved operations. If the operation results in a multiple completion or recompleation in a new interval, a Form 3160-4 shall be filed once testing has been completed. Final Abandonment Notices shall be filed only after all requirements, including reclamation, have been completed, and the operator has determined that the site is ready for final inspection.)

Well # 3 has been evaluated and we can proceed with operation as soon as possible, we are waiting on reply of the call for a work over rig, ok for H2s, we have a zone at 8400' that calculates production, this zone apparently has not been shot in the up dip limit of this fault block. After your OK we would MIRU puling unit, bleed well down, nipple up BOP, unseat packer, trip out hole with string, run a strip log in hole, tag bottom, match up the two logs for perf & collars, then decide to either run a TDT neutron or just load hole and perf, as the results decide as to acidize or return to production. WE also plan on running a slick gun (deep penetration) max perf
