13. Describe Proposed or Completed Operation (clearly state all pertinent details, including estimated starting date of any proposed work and approximate duration thereof. If the proposal is to deepen directionally or recompleat horizontally, give subsurface locations and measured and true vertical depths of all pertinent markers and zones. Attach the Bond under which the work will be performed or provide the Bond No. on file with BLM/BIA. Required subsequent reports shall be filed within 30 days following completion of the involved operations. If the operation results in a multiple completion or recompleat in a new interval, a Form 3160-4 shall be filed once testing has been completed. Final Abandonment Notices shall be filed only after all requirements, including reclamation, have been completed, and the operator has determined that the final site is ready for final inspection.)

1. Locate CBL log from well file. Determine TOC.
2. MIRU POOH w/prod equipment.
3. Run noise log and temp survey - run under SI conditions first, then flowing conditions.
4. RIH w/RBP and set at 3200' (assuming cement is above this point). Dump sand on top of RBP
5. Perforate over a 2' interval at 6 SPF spiraled down the gun - below fluid entry (or just above TOC depending on depths of each).
6. Obtain pump-in/circulation rate and pressure - once circulation is established - run liquid caliper to aid in cement volume design.
7. Get with Halliburton on cement design for this high water flow - probably flo-ck and a few other additives. Bring 1000 sxs cement to location.
8. Circulate cement & obtain squeeze on annulus.
9. Check for flow.
10. DO cmt & return to production.

14. I hereby certify that the foregoing is true and correct
