Form C-144
June 24, 2008

For temporary pits, closed-loop systems, and below-grade tanks, submit to the appropriate NMOCD District Office.
For permanent pits and exceptions submit to the Santa Fe Environmental Bureau office and provide a copy to the appropriate NMOCD District Office.

**Pit, Closed-Loop System, Below-Grade Tank, or
Proposed Alternative Method Permit or Closure Plan Application**

Type of action: ☐ Permit of a pit, closed-loop system, below-grade tank, or proposed alternative method
☒ Closure of a pit, closed-loop system, below-grade tank, or proposed alternative method

Instructions: Please submit one application (Form C-144) per individual pit, closed-loop system, below-grade tank or alternative request

Please be advised that approval of this request does not relieve the operator of liability should operations result in pollution of surface water, ground water or the environment. Nor does approval relieve the operator of its responsibility to comply with any other applicable governmental authority's rules, regulations or ordinances.

Attn: Mr. Cam Robbins
Production Supervisor

**RE: Work Plan For Pit Closure Located Jalmat Field Yates Sand Unit#231;
U/L B Sec 23, T22S and R35E of Lea County, New Mexico**

Dear Mr. Robbins:

P2 Construction, Inc. would like to take this time to thank you and Melrose Operating Co., for the opportunity to provide our professional services. Please find attached our work plan and cost for the above listed site.

If you have any questions and/or need more data in regards to projects please call at any time. My cell phone is 432-425-6192.

Sincerely,

Reynaldo Garza,
Sr. Project Manager
P2 Construction Inc.

Summary/Overview

The Jalmat Field Yates Sand Unit site should be completed and remediated in accordance with the standards of the NMOCD. Pit closure of the temporary drilling pit will be addressed accordingly.

The potential contaminants of concern are mid to high-level concentrations of Production water and Drill Cuttings circulated into temporary drilling pit from well bore.

The lands primary use is domestic pasture for ranching and the production of oil and gas.

The ground water depth data available for this area showed the depth to ground water to be in the 185' range BGS.

Pursuant to the standards of the NMOCD, the clean up level for this site will be at <5,000ppm of TPH, <50ppm for BTEX and Chlorides less than <250ppm.

The following scope of work was based on data from our site visit and the requirements of the NMOCD for site clean up.

Scope of Work for waste removal and site reclamation

NOTE: Melrose Operating Co. has requested for P2 Construction, Inc. to remove and remediate reserve pit drill cuttings for pit closure. Melrose has also requested that P2 Construction submit a copy of results and reclamation plan to NMOCD for entombment of impacted soils.

1. First P2 Construction will call One-Call for line spot clearance before any excavation at the site is started.
2. P2 Construction will mobilize to the site located in the area Southwest of Eunice, NM equipment and personnel necessary to start and complete the site remediation as required, getting the site back into compliance.
3. P2 Construction will delineate the site vertical and horizontal for chloride's to determine the extent of impacted soil. Samples will then be sent to a third party lab for analysis. Once analyses are sent back with the results; NMOCD will then be contacted for approval before any capping or pit closure is resumed. Due to the size of reserve pit P2 will split the site into quadrants testing 25% of impacted soils. P2 will test the vertical; starting one foot from mud removal into deep bury pit.

4. P2 Construction, Inc. will then start excavation of impacted soil for on-site deep bury pit. Impacted soils will then be mixed on a 3 to 1 ratio, then taking a grab sample from mixture and taking sample to a third party for a paint filtration testing method. Once method is determined that mixture has passed and approved by OCD. Mixture will then be placed in an approved reinforced 20 ml poly liner for entombment. The entombment pit will be approximately 100x40x20 foot deep; which will hold 2,900 Cubic yards of material. Once all contents are place in entombment pit; P2 will cap pit with an approved 20 ml poly liner. Then pit will be backfilled so that contents are 4 foot below ground level.
5. P2 Construction will field screen the site during the excavation and once the levels have dropped below NMOCD guidelines, final samples will be taken and sent to a third party lab for analysis.
6. If site does not clear NMOCD guidelines on the 3 to 1 mix ratio; this will be determined with a paint filter testing method at an approved lab. P2 construction will then submit a request for waste removal to the NMOCD office. Then waste material will be transferred to (Sundance Disposal) or an approved NMOCD disposal site.
7. Once all of the remediation criteria have been met for site closure and compliance, the site will be backfilled with clean material from the site. The site will be contoured with a slight crown to prevent the ponding of any rain water and reseeded; with the proper seed according to the NMOCD. Vegetative cover will equal 70% of the native perennial vegetative cover consisting of at least three native plant species, including at least one grass, but not including noxious weeds, and maintain that cover through two successive growing seasons or until successful growth is established.
8. Trench burial pit will be marked by an approved steel marker, no less than four inches in diameter, cemented in a hole three feet deep in the center of the onsite burial. The marker will be flush with the ground to allow access of the active well pad and for safety concerns. The marker will include a threaded collar to be used for future abandonment. The top of the marker will contain a welded steel plate 12" square that indicates the onsite burial of the temporary pit. The plate will be easily removable and a four foot tall riser will be threaded into the top of the collar marker and welded around the base with the operator's information. The operator's information will include the following: Operator Name, Lease Name, Well Name and Number, Unit Number, Section, Township, Range and an indicator that the marker is an onsite burial location.

9. Once all of the closure criteria have been met, a final closure report will be prepared by P2 Construction. This report will include a summary of remediation operations, findings on-site and lab analysis, site maps and project photos.

If you have any questions and/or need more data in regards to this project please call 432-425-6192 at any time.

Sincerely,

A handwritten signature in black ink, appearing to be 'Reynaldo Garza', with a large, stylized initial 'R' and a long horizontal stroke extending to the right.
