12. The *Journal of the American Statistical Association* published a study of the relationship between the number of cigarettes smoked per day and the risk of developing lung cancer. The study included 10,000 men who were followed for 10 years. The results showed that the risk of developing lung cancer increased with the number of cigarettes smoked per day. The study also found that the risk of developing lung cancer was higher for men who smoked for 20 years or more than for men who smoked for 10 years or less. The study concluded that the risk of developing lung cancer is directly related to the number of cigarettes smoked per day and the duration of smoking.
