Form C-103 Reba BNU State #5 API #30-025-31243 Sec 32-T11S-R35E Dated 9/16/09 Page Two

8/22/09 TIH w/7-5/8" shoe w/6" cut lip guide rough OD and ID w/mesh on cut lip guide. Tagged on some ledges @ 5860' & 6000'. Tagged casing top @ 6250'. Cut down 4'. Mill acts like it went beside casing. POOH – cut lip was bent. Prep to run flat bottom shoe w/10' bent sub.

8/23/09 RIH and work BHA through ledge @ 5860'. Made 4 attempts to stab sub inside casing. Fifth time saw bobble – went down 10' and set weight down. Started milling and first 15' were rough. Mill smoothed out and cut 29". Lost drilling weight and shoe. Bent sub was broken off inside collar on bottom threads. Prep to run wall hook on overshot and try and get casing top centered.

8/24/09 TIH w/7-3/8" wall hook, jars and drill collars. Worked through tight spot @ 5988'. Ran wall hook down to 6253' and tagged up. Did not tag @ 6250' where casing top has been. Worked wall hook. Never could hook casing. Prep to run longer wall hook with face mill in top bushing.

8/25/09 TIH w/7-3/8" x 12' wall hook with face mill. Tagged up @ 6255'. Tried to hook casing. Kept torquing up but could not pull casing over. Wall hook would not go down past 6255'. Prep to run tubing open ended.

8/26/09 TIH w/tubing open ended. Tagged casing @ 6251'. Could not work tubing past 6251' or stab inside casing stub. Pulled tubing up inside 8-5/8" @ 4300'. Prep to run downhole video camera.

8/27/09 Ran tubing back to 6251'. Pumped tubing volume 3 times to clean hole. Started in hole w/camera. Ran to 1500'. Pumped clean fluid. Tubing plugged up. POOH w/camera. Unplugged tubing. Ran downhole camera to 6250'. Camera showed open hole bridged off w/formation. Got pump rate up and saw one piece of metal. Appeared to be a casing sliver that was sliced and rolled over at top. Could not see any sign of casing stub. Established injection rate @ 4 BPM; 500 psi. Pumped 35 bbls in.

8/28/09 Sam Brandon of Yates Petroleum Corporation contacted OCD representative Larry (Buddy) Hill and informed him of the condition of the well. Mr. Hill's instructions were to spot 100 sx of cement at the stub, pressure up to 500 psi and see if we could get some cement into the casing and then leave 50' of cement on top of the stub, WOC, tag and TOOH.

8/31/09 Ran tubing down to 6245'. Tubing was plugged. Unplugged tubing. Spotted 140 sx Class "C" cement plug w/1% CaCl2. Pulled 15 stands and reversed tubing clean. Pressured up to 500 psi, held for 15 min. Waited 3 hrs and TIH. Tagged plug @ 6188'. POOH and laid down tubing to 5400'. Broke circulation and spotted 400 sx Class "H" w/FL and D65. Kick off plug from 5000' to 5400'. Pulled tubing up in casing and reversed out.

9/01/09 Tagged kick off plug @ 4815'. POOH and laid down tubing. Nippled down BOP. Nippled up cap flange. Cleaned location. Rigged down and moved off.

Allison Barton
