Form C-144 CLEZ July 21, 2008

Department Oil Conservation Division ground steel tanks or haul-off bins and propose 1220 South St. Francis Dr. Supplyment waste removal for closure, submit to the appropriate NMOCD District Office.

SEP 24 Forletosed-loop systems that only use above

Santa Fe, NM 87505

# Closed-Loop System Permit or Closure Plan Application

(that only use above ground steel tanks or haul-off bins and propose to implement waste removal for closure)

Type of action: Permit Closure

Instructions: Please submit one application (Form C-144 CLEZ) per individual closed-loop system request. For any application request other than for a closed-loop system that only use above ground steel tanks or haul-off bins and propose to implement waste removal for closure, please submit a Form C-144.

Please be advised that approval of this request does not relieve the operator of liability should operations result in pollution of surface water, ground water or the

	any other applicable governmental authority's rules, regulations or ordinances.

#### State of New Mexico EMNRD - OCD

# Closed-Loop Systems Permit Application Attachment - Red Raider 3 State #1-H

## Design Plan

A closed-loop system will be used while drilling the Red Raider 3 State #1-H in order to separate and contain all oil, water, drilling fluid, and drill cuttings. Returns from drilling operations will travel up the wellbore annulus, through a flowline at the surface, and into the closed-loop system. As the returning drilling fluid exits the flowline it will pass over two shakers with screens sized to most effectively separate liquids from solids. Liquids will be discharged into temporary above ground steel mud pits for re-use in drilling procedures. Solids will be shaken off into steel haul-off cuttings bins. Two centrifuges placed above the haul-off bins will have suction lines placed under the shaker with liquid discharge in the steel mud pits. The fluid suctioned here will pass through the centrifuges, dropping out any remaining solids into the steel haul-off bins used by the shaker discharge. Once a steel haul-off bin is adequately filled, it will be replaced by an empty bin and hauled away for disposal. This system will keep all drilling fluids and drill cuttings completely contained while waiting for re-use or until ready for disposal.

## Operating and Maintenance Plan

The closed-loop system will be operated during all drilling, circulating, and drilling fluid-conditioning operations. The system will be monitored twenty four hours a day for the duration of drilling operations, and will contain only fluids and solids used or generated during drilling operations. Monitoring will include inspection of temporary steel pits, flowlines, solids control equipment, haul-off bins, mud-pump suction lines, and transfer lines between pits. Inspections will focus on leak prevention, detection, and remediation if leaks are found. Equipment condition and effectiveness will be closely monitored to ensure that no failures are encountered that would result in any foreign solids or fluids coming into contact with the ground. Flowlines and transfer lines will be checked regularly to ensure that no plugging is taking place. Temporary steel pit levels will be monitored in order to keep at least two feet of freeboard as specified in subsection B of 19.15.17.12 NMAC in order to prevent overtopping. Haul-off bins containing solids will be monitored in order to prevent over filling or overflow of cuttings. All steel pits will be emptied and removed as soon as rig is released from location.

### Closure Plan

The closed-loop system used on the Red Raider 3 State #1-H will use only above ground steel tanks for drilling fluids, and hauloff bins for drill cuttings. As soon as drilling operations are completed, the above ground steel tanks will be emptied of all
drilling fluids, which will be disposed of at Gandy & Marley, Inc., facility permit number 711-10020. The drill cuttings generated
during drilling operations will be removed from the location in haul-off bins and disposed of at the same disposal facility as
drilling fluid. The cuttings will be removed from location as needed throughout drilling procedures. Once drilling is completed,
any remaining bins containing cuttings will be transported to disposal facility, emptied, and cleaned thoroughly.
