13. Describe Proposed or Completed Operation: Clearly state all pertinent details, including estimated starting date of any proposed work and approximate duration thereof. If the proposal is to deepen directionally or recompleat horizontally, give subsurface locations and measured and true vertical depths of all pertinent markers and zones. Attach the Bond under which the work will be performed or provide the Bond No. on file with BLM/BIA. Required subsequent reports must be filed within 30 days following completion of the involved operations. If the operation results in a multiple completion or recompleat in a new interval, a Form 3160-4 must be filed once testing has been completed. Final Abandonment Notices must be filed only after all requirements, including reclamation, have been completed and the operator has determined that the site is ready for final inspection.)

- Excavate old drilling pit area (75 ft x 75 ft) that shows salt leaching on the surface to a depth of 4 ft. Haul salt-contaminated soil to a NM OCD approved landfill for disposal. Install a 20 mil HDPE liner over excavated area to cap any remaining soils in the old drilling pit. Backfill with clean soil. Contour old pit area with a slight crown to prevent water ponding. Re-seed with seed mixture 2.
- Remove remaining caliche from well pad and approximately 100 yards of lease road from the well pad to the main lease road. The caliche on the main lease road will be left as per previous agreement with landowner. Re-seed with seed mixture 2.
- Remove all trash from location.

Note: All the dirt used in the previous reclamation work was purchased from the landowner and came from a site approximately 1/4 mile from the well site. The grass seed mixture used previously was to satisfy the landowner's requests and was approved by the BLM.

COA: Contact CFD @ 575-234-5905 prior to start and prior to liner placement.
