²² Describe the proposed program. If this application is to DEEPEN or PLUG BACK, give the data on the present productive zone and proposed new productive zone. Describe the blowout prevention program, if any. Use additional sheets if necessary.

We propose to drill a 12 1/4" hole to the top of the Russler Formation (est 2200') and set 8 5/8" casing. The 8 5/8" casing will be cemented with an adequate volume of cement to circulate to surface. While WOC we will nipple up a double ram BOP (3000 psi) and after WOC a minimum of 18 hours we propose to commence drilling a 7 7/8" hole. The 7 7/8" hole will be drilled to TD and the well will be logged and a decision will be made to attempt to complete or plug. If the hole is dry it will be plugged per NMOC rules and regulations. If a completion attempt is made 5 1/2" casing will be run and cemented. The well will be tested using perforations in the 5 1/2" casing.

Mud Program: 0-2200' fresh, 2200-6500' Brine, 6500-TD Brine and salt gel (vis 40+) and starch (wl <10)
