## NEW MEXICO OIL CONSERVATION COMMISSION

Santa Fe, New Mexico

## MISCELLANEOUS NOTICES

Submit this notice in TRIPLICATE to the District Office, Oil Conservation Commission, before the work specified is to begin. A copy will be returned to the sender on which will be given the approval, with any modifications considered advisable, or the rejection by the Commission or agent, of the plan submitted. The plan as approved should be followed, and work should not begin until approval is obtained. See additional instructions in the Rules and Regulations of the Commission.

## FULL DETAILS OF PROPOSED PLAN OF WORK (FOLLOW INSTRUCTIONS IN THE RULES AND REGULATIONS)

State AD No. 1 is currently producing 37 barrels of oil and a trace of water from the Devonian. The flowing pressure is 20# and only a slight amount of water is needed to kill the well. This makes swabbing jobs necessary. It is proposed to perforate an additional 25' of Devonian from 9795' to 9820' in order to increase production. This upper 25' of Devonian has excellent porosity as indicated by logs and a DST which was run when the well was drilled. It is proposed to acidize these perforations. It is believed that a flowing well may be obtained with increased production. If the well fails to flow, pumping equipment will be installed.
