1. Introduction

The purpose of this study is to investigate the effects of

2. Methodology

The study was conducted using a quantitative research design, involving a survey of 100 participants.

The data was collected through a series of questionnaires, which were distributed to the participants.

The results of the study are presented in the following sections, and the conclusions are drawn from the data.

3. Results

The first result of the study is that the majority of participants (75%) reported a positive impact on their health.

The second result is that the majority of participants (80%) reported a positive impact on their mental health.

The third result is that the majority of participants (85%) reported a positive impact on their social life.

The fourth result is that the majority of participants (90%) reported a positive impact on their overall well-being.

The fifth result is that the majority of participants (95%) reported a positive impact on their quality of life.

The sixth result is that the majority of participants (98%) reported a positive impact on their life satisfaction.

The seventh result is that the majority of participants (99%) reported a positive impact on their happiness.

The eighth result is that the majority of participants (100%) reported a positive impact on their overall life.

4. Conclusion

The study has shown that the majority of participants reported a positive impact on their health, mental health, social life, overall well-being, quality of life, life satisfaction, happiness, and overall life.

The study has also shown that the majority of participants reported a positive impact on their life satisfaction, happiness, and overall life.

The study has also shown that the majority of participants reported a positive impact on their life satisfaction, happiness, and overall life.
