

NEW MEXICO OIL CONSERVATION COMMISSION

SOUTHEAST NEW MEXICO PACKER LEAKAGE TEST

Operator Amerada Hess Corporation			Lease J. T. Caudle Gas Com			Well No. 2	
Location of Well	Unit D	Sec 3	Twp 12-S	Rge 33-E	County Lea		
Name of Reservoir or Pool		Type of Prod (Oil or Gas)	Method of Prod Flow, Art Lift	Prod. Medium (Tbg or Csg)	Choke Size		
Upper Compl	Bagley Upper Penn Gas		Gas	T. A.	Tbg	20/64	
Lower Compl	Bagley Lower Penn Gas		Gas	Flow	Tbg	3/4	

FLOW TEST NO. 1

Both zones shut-in at (hour, date): 9:00 A. M. 7-4-75

Well opened at (hour, date): 9:00 A.M. 7-5-75	Upper Completion	Lower Completion
Indicate by (X) the zone producing.....		X
Pressure at beginning of test.....	0	290
Stabilized? (Yes or No).....	Yes	Yes
Maximum pressure during test.....	0	230
Minimum pressure during test.....	0	200
Pressure at conclusion of test.....	0	230
Pressure change during test (Maximum minus Minimum).....	-	30
Was pressure change an increase or a decrease?.....	-	Inc.
Well closed at (hour, date): 9:00 A.M. 7-6-75	Total Time On Production 24 hrs.	
Oil Production	Gas Production	
During Test: 0 bbls; Grav. _____	During Test 337 MCF; GOR _____	

Remarks _____

FLOW TEST NO. 2

Well opened at (hour, date): 9:00 A.M. 7-7-75	Upper Completion	Lower Completion
Indicate by (X) the zone producing.....	X	
Pressure at beginning of test.....	0	290
Stabilized? (Yes or No).....	Yes	Yes
Maximum pressure during test.....	0	290
Minimum pressure during test.....	0	290
Pressure at conclusion of test.....	0	290
Pressure change during test (Maximum minus Minimum).....	-	-
Was pressure change an increase or a decrease?.....	-	-
Well closed at (hour, date): 7-8-75	Total time on Production 24 hrs.	
Oil Production	Gas Production	
During Test: _____ bbls; Grav. _____	During Test _____ MCF; GOR _____	

Remarks This zone T. A. _____

I hereby certify that the information herein contained is true and complete to the best of my knowledge.

Approved _____ 19 _____
New Mexico Oil Conservation Commission
JUL 31 1975
Operator Amerada Hess Corporation
By Alfred Young
Title Operation Technician

1. A packer leakage test shall be conducted on each multiply completed well within seven days after actual completion of the well, and normally thereafter as prescribed by the order authorizing the well, and completion. Such tests shall also be commenced on all multiplying completion within seven days following recompletion and/or chemical or fracture treatment, and whenever remedial work has been done on a well during which the packer or the tubing have been disturbed. Tests shall also be taken at any time that communication is suspected or when requested by the Commission.

2. At least 72 hours prior to the commencement of any packer leakage test, the operator shall notify the Commission in writing of the exact time the test is to be commenced. Offset operators shall also be so notified.

3. The packer leakage test shall commence when both zones of the dual completion are shut-in for pressure stabilization. Both zones shall remain shut-in until the well-head pressure in each has stabilized and for a minimum of two hours thereafter, provided however, that they need not remain shut-in more than 24 hours.

4. For Flow Test No. 1, one zone of the dual completion shall be produced at the normal rate of production while the other zone remains shut-in. Such test shall be continued until the flowing well-head pressure has become stabilized and for a minimum of two hours thereafter, provided however, that the flow test need not continue for more than 24 hours.

5. Following completion of Flow Test No. 1, the well shall be shut-in and the pressure shall be recorded at the wellhead at least once during the shut-in period. The results of the above-described tests shall be filed in triplicate within 15 days after completion of the test. Tests shall be filed with the appropriate District Office of the New Mexico Oil Conservation Commission on Southwest New Mexico Packer Leakage Test Form provided in triplicate, together with the original pressure recording gauge charts with all the deadweight pressures which were taken indicating thereon. In the event of filling the flowchart chart, the operator may construct a pressure versus time curve for each zone of each test, indicating correct pressure versus changes which may be reflected by the gauge charts as well as all deadweight pressure readings which were taken. If the pressure curve is submitted, the original chart must be permanently filed in the operator's office. Form C-116 shall also accompany the Packer Leakage Test Form when the test period coincides with a gas-oil ratio test period.

6. Flow Test No. 2 shall be conducted even though no leak was detected during Flow Test No. 1, provided the flow test No. 2 is conducted within 15 days after completion of the test. Tests shall be filed with the appropriate District Office of the New Mexico Oil Conservation Commission on Southwest New Mexico Packer Leakage Test Form provided in triplicate, together with the original pressure recording gauge charts with all the deadweight pressures which were taken indicating thereon. In the event of filling the flowchart chart, the operator may construct a pressure versus time curve for each zone of each test, indicating correct pressure versus changes which may be reflected by the gauge charts as well as all deadweight pressure readings which were taken. If the pressure curve is submitted, the original chart must be permanently filed in the operator's office. Form C-116 shall also accompany the Packer Leakage Test Form when the test period coincides with a gas-oil ratio test period.

7. All pressure, throughout the entire test, shall be continuously measured and recorded with recording pressure gauges. The accuracy of which must be checked with a deadweight tester at least twice, once at the beginning and once at the end, of each flow test.

8. The results of the above-described tests shall be filed in triplicate within 15 days after completion of the test. Tests shall be filed with the appropriate District Office of the New Mexico Oil Conservation Commission on Southwest New Mexico Packer Leakage Test Form provided in triplicate, together with the original pressure recording gauge charts with all the deadweight pressures which were taken indicating thereon. In the event of filling the flowchart chart, the operator may construct a pressure versus time curve for each zone of each test, indicating correct pressure versus changes which may be reflected by the gauge charts as well as all deadweight pressure readings which were taken. If the pressure curve is submitted, the original chart must be permanently filed in the operator's office. Form C-116 shall also accompany the Packer Leakage Test Form when the test period coincides with a gas-oil ratio test period.

9. Following completion of Flow Test No. 2, the well shall be shut-in and the pressure shall be recorded at the wellhead at least once during the shut-in period. The results of the above-described tests shall be filed in triplicate within 15 days after completion of the test. Tests shall be filed with the appropriate District Office of the New Mexico Oil Conservation Commission on Southwest New Mexico Packer Leakage Test Form provided in triplicate, together with the original pressure recording gauge charts with all the deadweight pressures which were taken indicating thereon. In the event of filling the flowchart chart, the operator may construct a pressure versus time curve for each zone of each test, indicating correct pressure versus changes which may be reflected by the gauge charts as well as all deadweight pressure readings which were taken. If the pressure curve is submitted, the original chart must be permanently filed in the operator's office. Form C-116 shall also accompany the Packer Leakage Test Form when the test period coincides with a gas-oil ratio test period.
