THIS IS A REPORT OF: (Check appropriate block)

- ☐ Beginning Drilling Operations ☐ Casing Test and Cement Job ☒ Other (Explain):
☐ Plugging ☐ Remedial Work **Temporarily Abandon**

Detailed account of work done, nature and quantity of materials used, and results obtained.

After drilling to 4752' the 9-5/8" intermediate casing was found to be parted in three pieces. After 5 days of attempting to repair casing it was decided to temporarily abandon hole and skid rig 100' to the east and drill a new well. A Baker DM cement retainer was set at 4151'. (9-5/8" casing parted at 4245') and squeezed with 200 sacks of Longhorn regular neat cement. 5 sacks of cement were placed on top of 9-5/8" Baker DM cement retainer, 9-5/8" casinghead removed and a 1/4" plate welded on top of 13-3/8" casing.

NOTE: On completion of new well. An attempt will be made to recover approximately 1400' of 9-5/8" casing and plug and abandon this well.
