**Federal Warren**  
Well No. 1 is located 660 ft. from N line and 660 ft. from E line of sec. \_\_\_\_\_  
NW/4 NW/4 of Sec. 17 T-9-S R-36-E N.M.P.M.  
(1/4 Sec. and Sec. No.) (Twp.) (Range) (Meridian)  
East Bough Lee New Mexico  
(Field) (County or Subdivision) (State or Territory)

The elevation of the derrick floor above sea level is 4097 ft.

**DETAILS OF WORK**

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

The casing left in this well is as originally run and cemented. No attempt was made to recover any of either string of pipe which had been circulated from top to bottom with cement.

The surface casing consists of new 13 3/8" OD 48# pipe set at 378' and cemented with 400 sks. regular cement which circulated to the surface.

The intermediate casing consists of new 8 5/8" OD 32# pipe set at 4318' and cemented to the surface with 2500 sks. cement.

A 3000# Gulfco type "BW" casing head packs off between the two strings of pipe.

See supplemental sheet attached and copy of well electric log.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
