1. *Chlorophyll a* (Chl *a*) and *Chlorophyll b* (Chl *b*) were determined using the method of Arar and Collins (1987). The concentration of Chl *a* and Chl *b* was expressed as $\mu\text{g mL}^{-1}$ of the sample.

1. The first group of people who are likely to be affected by the proposed project are the local residents. The project is located in a residential area, and the construction and operation of the project may cause noise, dust, and other disturbances to the surrounding community. The project proponent should take measures to minimize these impacts, such as implementing noise control measures and dust suppression techniques.
